Genesee County Employees Retirement System Actuarial Information for GASB Statement 67 December 31, 2014

May 7, 2015

The Retirement Commission 1101 Beach Street Flint, Michigan 48502-1453

Dear Retirement Commission:

This document contains actuarial information required for Plan reporting purposes pursuant to Governmental Accounting Standards Board Statement No. 67 effective for the Fiscal Year ended December 31, 2014.

Respectfully submitted,

Sandia MRodwan

Member, American Academy of Actuaries

Net Pension Liability

The components of the net pension liability at December 31, 2014 were as follows:

| Total pension liability | \$634,562,688 |
|--|---------------|
| | |
| Plan fiduciary net position | 444,707,729 |
| | |
| County's net pension liability | \$189,854,959 |
| | |
| Plan fiduciary net position as a percentage of the total pension liability | 70.08% |

Actuarial assumptions. The total pension liability was determined based on the annual actuarial valuation as of January 1, 2015. The following actuarial assumptions were applied to compute the total pension liability:

| Actuarial Cost Method | Entry Age |
|----------------------------|-----------------------------------|
| | |
| Inflation | 3.00% |
| | |
| Salary Increases | 3.0%-7.03% (includes inflation) |
| | |
| Cost of Living Adjustments | Varies depending on Benefit Group |

Mortality rates were based on the RP 2000 Combined Healthy Mortality Table.

Discount rate. The discount rate used to measure the total pension liability was 6.88%. The projection of cash flows used to determine the discount rate assumed that member contributions will be made at the current contribution rate and that County Contributions will be made at rates equal to the difference between actuarially determined contribution rates and the member rate. Based on these assumptions, the 6.88% discount rate is the single rate of return that, when applied to all projected benefit payments, results in an actuarial present value of projected benefit payments equal to the total of the actuarial present values determined in conformity with GASB 67, paragraph 44.

Sensitivity of the net pension liability to changes in the discount rate. The following presents the County's net pension liability, calculated using the discount rate of 6.88%, as well as what the County's net pension liability would be if it were calculated using a discount rate that is 1% lower (5.88%) or 1% higher (7.88%) than the current rate:

| | 1% Decrease Rate 5.88% | Computed GASB 67 Rate 6.88% | 1% Increase Rate 7.88% |
|--------------------------------|------------------------------|-----------------------------------|------------------------------|
| | | | |
| County's net pension liability | \$258,304,185 | \$189,854,959 | \$131,719,557 |

Notes to Schedule

Valuation date: Actuarially determined contribution rates are calculated as of the December 31, the year prior to the end of the fiscal year in which contributions are reported.

Covered employee payroll is as of December 31 of the current fiscal year.

Methods and assumptions used to determine contribution rates:

Actuarial cost method Entry age

Amortization method Level percentage of payroll for Water, Roads, Mt. Morris and Library; Level dollars for General and Mental Health

Remaining amortization period 25 years, open

Asset valuation method 4 years smoothed market

Inflation 3.00%

Salary increases 3.0%-7.03%, including inflation

Investment rate of return 8.0%, net of pension plan investment expense, including inflation
