CHAMPAIGN COUNTY MISCELLANY

Miscellaneous Statistics of Champaign County

201,081 Champaign County Population in 2010
U.S. Census Bureau, Census 2010

1.6% Champaign County Population as a percentage of the population of the state of Illinois
U.S. Census Bureau, Census 2010

102 Number of Counties in Illinois

5 Rank of Champaign County by total area
Illinois Geological Survey

10 Rank of Champaign County by total population
U.S. Census Bureau, Census 2010

998.4 Area of Champaign County in square miles
Champaign County GIS Consortium

638,976 Number of acres in Champaign County
Champaign County GIS Consortium

201.4 Approximate number of persons per sq. mile

1833 The year Champaign County was established

~855 The highest elevation in Champaign County in feet above mean sea level
Illinois Geological Survey

~625 The lowest elevation in Champaign County in feet above mean sea level
Illinois Geological Survey

30 Number of Townships in Champaign County

24 Number of Municipalities in Champaign County

109 Highest recorded temperature in Champaign-Urbana in degrees Fahrenheit
Illinois State Water Survey

-25 Lowest recorded temperature for Champaign-Urbana in degree Fahrenheit
Illinois State Water Survey

122,441 Registered Voters in Champaign County
Champaign County Clerk's Office

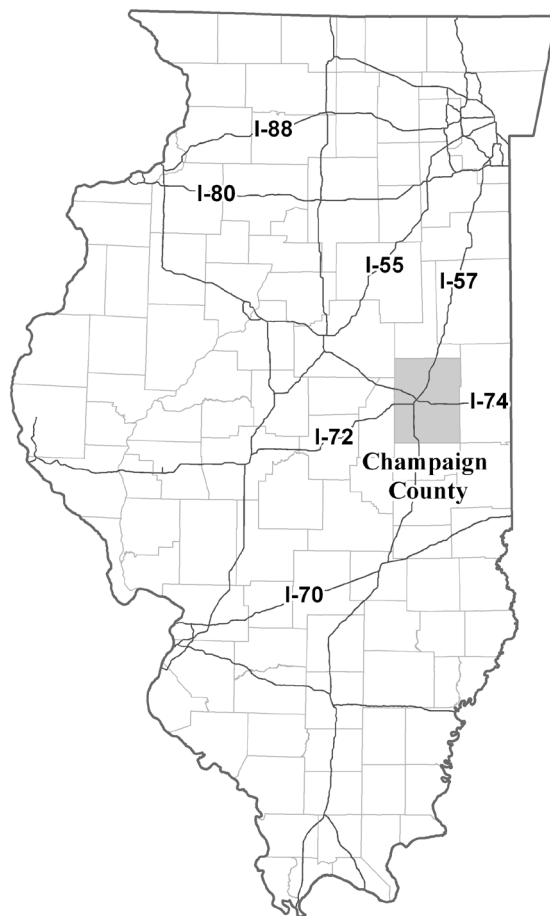

17.1 Mean travel time to work in minutes for (+/-0.6) workers age 16 and over in 2010
2006-2010 American Community Survey 1-year estimate

16.3% Percent of the population age 5 and over in 2010, speaking a language other than English
2006-2010 American Community Survey 1-year estimate

178 Growing Season in Champaign County in days
Illinois State Water Survey

50.1 Female share of the Champaign County population in 2000
U.S. Census Bureau, Census 2010

186 Number of taxing bodies in Champaign County
Illinois State Water Survey

POPULATION

Population Trends

Table 1 provides information on population in Illinois, Champaign County, and townships within Champaign County from 1970 to 2010. The highest percentages of growth from 1970 to 2010 occurred in Mahomet and St. Joseph townships. The highest percentages of decline for the same period occurred

in Rantoul and Raymond townships. Population counts for political boundaries are created by adding together counts from all census block statistical areas within the boundary.

Table 2 presents population trends for the municipalities within Champaign County from 1970-2010. The greatest percentages of growth from 1970-2010 occurred in Savoy and

Mahomet, and the greater percentages of decline occurred in Rantoul and Foosland. Figure 1, at the top of page 6, shows the population trends for several municipalities in Champaign County from 1960 to 2010. At the time of this publication, no issues are being challenged with Census 2010 data.

Tables 1 and 2 both include revised population totals from Census 2000 for Brown Township, Champaign City Township, Cunningham Township, as well as for the City of Champaign, the Village of Rantoul, and the City of Urbana. These populations were revised because a major population error was discovered shortly after the release of the 2000 data in which 1,471 persons of group quarters populations were incorrectly assigned to block 4055, census tract 15 in Brown Township. In reality, this

block is a field next to a railroad. The 1,471 persons were reassigned to the previously mentioned townships and municipalities within Champaign County.

Table 3 shows population comparisons from 1970 to 2010 for Champaign County and other Central Illinois counties including Macon, McLean, Peoria, and Sangamon. From 1970 to 2010, McLean County experienced the greatest percent growth and Macon County and Peoria County had the greatest percent of population decline.

Table 4 provides intercensal estimates from 2000 to 2009 for cities and villages in Champaign County and the Champaign MSA which is comprised of Champaign, Ford, and Piatt Counties.

Table 2: Population Trends in Champaign County Municipalities: 1970, 1980, 1990, 2000, and 2010

Population Distribution by Age and Sex

Table 5 provides information about the population distribution by age and sex in Champaign County for 1990, 2000, and 2010. Figure 3 below illustrates age and sex population distributions for 2010. The number of males and females is currently near even, with the majority being female. For the past decennial censuses, males have been the majority. The age group with the highest number

of males is 20-24, and the age group with the highest number of females is also 20-24. The 30-34 age group has experienced the largest decline in percentage of both males and females.

Figure 4 shows the components of these population trends by sex and age in Champaign County from 1960 to 2010.

Table 5: Champaign County Populations Distribution by Age and Sex: 1990, 2000, and 2010

Population by Race and Ethnicity

Census 2010 continued race and ethnicity options developed for Census 2000 where respondents were given the option of selecting one or more race categories. In the following tables, the “other” column for 2000 and 2010 includes respondents of some other race as well as those of two or more races. The “other” column for 1990 only includes those respondents of a single other race, preventing direct comparison for this category between years prior to 1990 and after. In 2000, respondents of two or more races accounted for 2 percent of the population of Champaign County; in 2010, respondents of two or more races accounted for 2.7 percent of the population. This category primarily consisted of respondents who were both White and Black, White and Asian, White and some other race, and White and American Indian or Alaska Native.

Race and Ethnicity statistics for 2010 show that Champaign County is becoming more diverse. This is primarily seen in larger communities, however smaller communities within the County are also more diverse.

Hispanic is not a racial category but rather an ethnic category in which people are classified based on any number of cultural identities including language, country of origin, and lineage or parents’ ancestry. Hispanics can be of any race. Table 7 and Table 8 present the population by race for the townships and municipalities in Champaign County, respectively.

In 2000, 1,471 persons of the group quarters population were incorrectly attributed to Brown Township. These 1,471 persons were reallocated to the City of Champaign, Champaign City Township, the City of Urbana, Cunningham Township, the Village of Rantoul, and the Rantoul Township. The population totals have been corrected, but the Census Bureau does not release characteristics of the revised population of each jurisdiction. The number of people of each race will not sum to the population total for the marked (*) jurisdictions, and the race and ethnic breakdowns of these townships have not been corrected.

From 1970 to 2000, the white population of Champaign County declined relative to other race categories and by 8,802 people in absolute terms. However, between 2000-2010, the white population of Champaign County increased by over 4 percent resulting in the first gain in 3 decades. Between 1970 to 2010, the Black and African American population increased by 134 percent. The Asian, Pacific Islander, and Indian population grew by over 1,132 percent for the same time period. Due to the inconsistency in defining the “other” category, a trend for that race category is difficult to determine. The decrease in respondents selecting the “other” category is likely due to a better understanding of race and ethnicity. Census 2010 respondents were more likely to select specific race and ethnicity categories than in the past.

Table 7 and Table 8 list the population by race for Champaign County and its Townships for 2000 and 2010.

Notes: ¹ AIAN = American Indian or Alaska Native. ² NHP1 = Native Hawaiian or other Pacific Islander. ³ For the Census 2000, respondents were given the option of selecting one or more race categories to indicate their racial identities. In this table, the "Other" column for 2000 includes respondents of some other race and those of two or more races. The "Other" column for 1990 only indicates those respondents of some other race. The Census 2000 data on race are not directly comparable with data from the 1990 census or earlier censuses. ⁴ The federal government considers race and Hispanic origin to be two separate and distinct concepts. Thus, the "Hispanic or Latino Origin" column is not a component of the "Total" column.

* For the Census 2000, 1,471 persons of the group quarter population were incorrectly attributed to Brown Township. These 1,471 persons were reallocated to the City of Champaign, the Village of Rantoul, and the City of Urbana. The population totals have been corrected, but the Census Bureau does not release corrected data pertaining to the race, age, sex, and other characteristics of the revised population in each jurisdiction. The number of people of each race will not sum to the population total for the marked (*) jurisdictions, and the racial breakdowns of these townships have not been corrected. Population corrections were also made to Illinois and Gifford in 2000. The revised information is available at <http://www.census.gov/prod/cen2000/notes/errata.pdf>

Sources: Census 2000, Summary File 1, U.S. Census Bureau; Census 2010, Summary File 1, U.S. Census Bureau.

Notes: ¹ AIAN = American Indian or Alaska Native; ² NHPI = Native Hawaiian or other Pacific Islander; ³ For the Census 2000, respondents were given the option of selecting one or more race categories to indicate their racial identities. In this table, the "Other" column for 2000 includes respondents of some other race and those of two or more races. The "Other" column for 1990 only indicates those respondents of some other race. The Census 2000 data on race are not directly comparable with data from the 1990 census or earlier censuses; ⁴ The federal government considers race and Hispanic origin to be two separate and distinct concepts. Thus, the "Hispanic or Latino Origin" column is not a component of the "Total" column.

* For the Census 2000, 1,471 persons of the group quarter population were incorrectly attributed to Brown Township. These 1,471 persons were reallocated to the City of Champaign, the Village of Rantoul, and the City of Urbana. The population totals have been corrected, but the Census Bureau does not release corrected data pertaining to the race, age, sex, and other characteristics of the revised population in each jurisdiction. The number of people of each race will not sum to the population total for the marked (*) jurisdictions, and the racial breakdowns of these townships have not been corrected. Population corrections were also made to Illinois and Gifford in 2000. The revised information is available at <http://www.census.gov/prod/cen2000/notes/errata.pdf>

Foreign-Born Population

The foreign born population is comprised of those persons who are not U.S. citizens at birth. Data on the foreign-born population is available through the U.S. Census Bureau at www.census.gov.

Figure 7 shows both the total population and the percentage of the foreign born population in Champaign County from 1900 to 2010. The percentage of foreign-born population decreased significantly from 1900 to 1950, while the percentage of foreign-born population increased from 1960 to 2010.

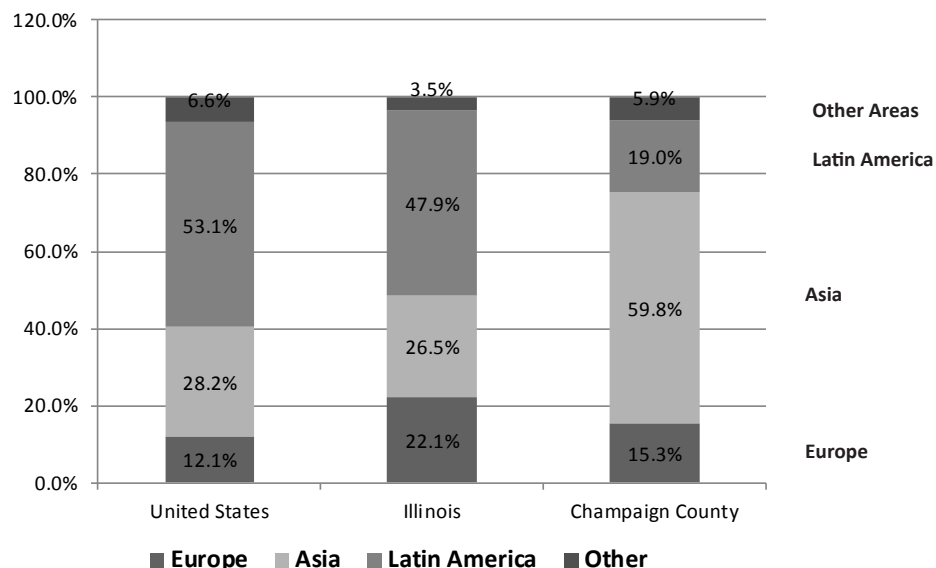

The U.S. Census Bureau also provides information about the place of birth for the foreign-born population. Figure 8 shows the foreign-born population by region of birth for the year 2010 for the United States, Illinois, and Champaign County. Champaign County has a much smaller percentage of persons born in Latin America than both Illinois and the United States, while Champaign County has a much larger percentage of persons born in Asia than both Illinois and the United States.

Components of Population Change

Table 9 provides information about the components of population change in Champaign County.

Data regarding population, birth, and deaths in Champaign County generally shows a slight decrease for the natural increase statistic overall between 1980 and 2008. The data shows relatively large periods of time where natural increase is relatively stable. From 1980 to 1991, natural increase ranged from 1,528 to 1,750. From 1994 to 2004, natural increase ranged from 1,042 to 1,153. Due to variation in annual population estimates and a highly transient population, it is difficult to determine whether natural increase or net migration is the primary cause of population change.

Population totals can be found at the Census Bureau website at www.census.gov, and information on the number of births and deaths is from the Illinois Department of Public Health. Natural increase was calculated by subtracting the number of deaths from the number of births. Population change during the year was calculated by subtracting the total population of one year from the population of the following year. Net migration is the difference between the population change and the natural increase.

Figure 8 illustrates the natural increase of population from 1980-2008, and also compares the natural increase to the fluctuations in migration from year to year. A sharp decrease in the population in the early 1990's can be attributed to the closing of the Chanute Air Force Base in Rantoul.

Table 9: Components of Champaign County Population Change: 1980-2010

Year	Population Estimate ¹	Births ²	Deaths ²	Natural Increase ³	Pop Change During Year ³	Net Migration ³

Source: 1980 Census of Population and Housing, Census 1990, Census 2000, American Community Survey 1-year estimates (1980-2009), Census 2010, U.S. Census Bureau; Illinois Department of Public Health

Notes: ¹ Population totals for the years 1981 to 2009 are intercensal estimates from the U.S. Census Bureau as of July 1st of each year. Please note that the population base estimates from the decennial censuses are different than the intercensal estimates. Decennial census totals as of April 1st of each year: 1990 = 173,025 and 2000 = 179,669. The 1980 population total is a base estimate from the decennial census; ² Birth and death totals are from the Illinois Department of Public Health; ³ Natural Increase, Population Change, and Net Migration calculated from population, births, and deaths; -- Denotes data that is not yet available.

HOUSING

Tenure

Tenure refers to the distinction between owner-occupied and renter-occupied housing units.

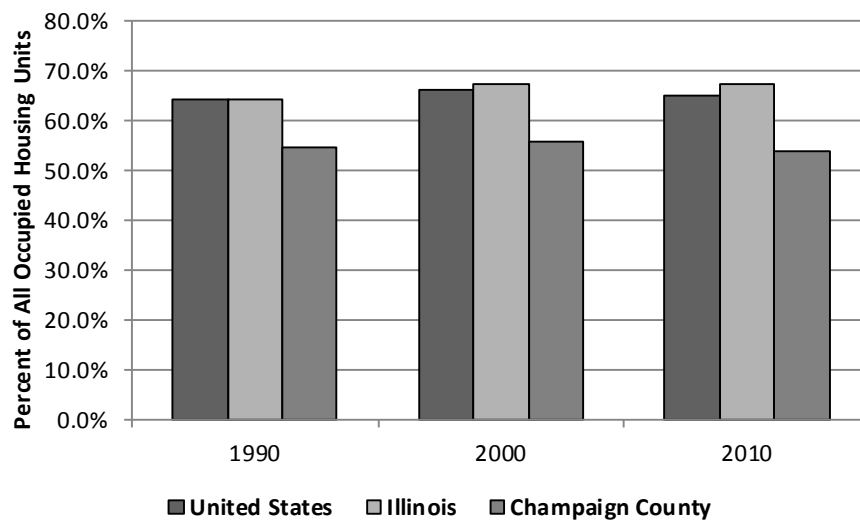

Since 1990, the percentage of owner-occupied housing units increased by 1.4 percent in the United States, 5.1 percent in Illinois, and decreased by 1.4 percent for Champaign County. Figure 9 illustrates these trends.

The highly transient student population in

Champaign County is the primary reason for an overall home ownership rate that is significantly lower than the state or national rates. This distortion can be seen in the owner-occupied householder age 25 and over statistic shown in Table 10.

Table 11 shows median housing values and median gross rent and is not adjusted for inflation.

Housing Units

The Construction Statistics Division, Building Permits Branch of the United States Census Bureau collects statistics on the number of housing starts for Champaign County and its municipalities. These are identified as single family units (single dwelling detached from other units) or multifamily units (two or more units

owner or renter occupied attached units as well as mobile homes). Increases in housing units can occur because of construction or annexation of existing units. The largest increase in housing units from 2000-2010 was 47.5 percent in Mahomet. Champaign County increased its housing stock by 11,840 units from 2000-2010 (15.73%).

Housing Opportunity Index (HOI)

The Housing Opportunity Index (HOI) is defined as the share of affordable homes sold in an area that would have been affordable to a family earning a median income. In the fourth quarter of 2010, 84.9% of the population in Champaign-Urbana MSA could afford the median-priced house.

The HOI is produced by the National Association of Home Builders (NAHB) and is composed of two major components: income and housing cost. For income, the NAHB uses the annual median family income estimates

for metropolitan areas published by the department of Housing and Urban Development (HUD).

The NAHB uses sales transaction records from First American Real Estate Solutions and a variety of tax and insurance rates to produce an estimated monthly housing cost.

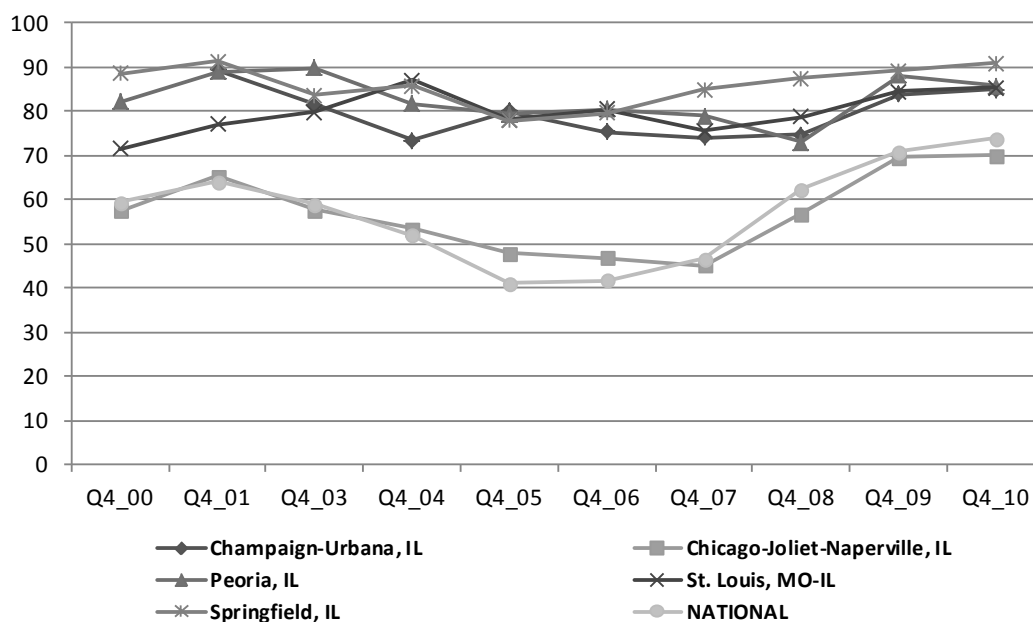

When creating the HOI, the NAHB assumes that a family can afford to spend 28 percent of its gross income on housing. Also, the monthly principal and interest that an owner would pay as a part of the housing cost is based

Table 13: Housing Opportunity Index for Select Metro Areas in the Midwest: Quarter 4, 2010

	Housing Opportunity Index (%)	Median Income	Median Price
United States	73.9	64,400	175,000

Note: Data for 2002 is unavailable

on the assumption of a 30-year fixed rate mortgage, with a loan for 90 percent of the sales price (i.e., 10 percent down payment).

Table 13 on the previous page presents the HOI and affordability ranking for several metropolitan areas in the Midwest for the fourth quarter of 2010. Figure 11 shows the HOI for several metropolitan areas in the Midwest for the fourth quarters of 2000-2010.

Housing prices, median family incomes and mortgage interest rates are three factors that influence housing affordability. Table 14 presents the median sale prices of existing single-family homes and the median

family incomes for the Champaign-Urbana MSA, and the 30-year fixed mortgage rates for the nation. Data were obtained from a variety of sources including the National Association of REALTORS, the U.S. Department of Housing and Urban Development, and the Federal Home Mortgage Corporation.

Figure 12 shows the indexed values for the median sales price, median family income, and mortgage interest rates from 1998-2010. From 2000-2010, existing single-family home prices have increased by 43.6 percent, median family incomes have increased by 18.9 percent, and interest rates have decreased by 41.8 percent.

Homelessness

The Urbana-Champaign Continuum of Care conducts the local homeless survey in Champaign County. Persons who are seeking housing or emergency services complete the surveys. The time frame for the survey is usually a one-week period and it is completed in order to measure the level of effectiveness provided by existing local homeless providers and services and identify any additional approaches needed. During January 27-28, 2011 the Urbana-Champaign Continuum of Care conducted their biannual Point-In-Time Survey. The survey was conducted by Continuum member

agencies along with other locations serving homeless persons throughout the various shelters, soup kitchens, schools and clinics. The survey also included a street count. However, it is important to note that the results of the survey may have been affected by weather and other factors.

Table 15 presents homelessness statistics in Champaign County for 2011. Half of the homeless persons surveyed were African American. The survey also showed that of the total homeless persons who responded 63 percent were single individual households.

LABOR FORCE

Employment Status

The Illinois Department of Employment Security produces statistics on the number of persons in the labor force, the number of persons employed / unemployed, and unemployment rates. Data is presented in Table 16 for the years 1990, 2000, 2003, and 2006-2010 for the United States, Illinois, Champaign County, City of Champaign and City of Urbana.

Figure 13 illustrates the annual unemployment rates for 1990 to 2010. Unemployment rates for the City

of Champaign, the City of Urbana, and Champaign County tend to be two to four percent below unemployment rates for Illinois and the United States.

In 2010, Champaign County had an unemployment rate of 9.0 percent and the State of Illinois had an unemployment rate of 10.3 percent. Of all counties in Illinois, Brown County had the lowest unemployment rate of 5.1 percent, while Boone County had the highest unemployment rate of 15.9 percent.

Employed Persons by Sector

The Top 5 employment sectors for Champaign-Urbana MSA are Government, Trade, Transportation, & Utilities, Education & Health Services, Retail Trade, and Leisure & Hospitality. University of Illinois employees are included in government because it is a state University.

Tables 18 and 19 contain data on the number of employed persons by sector and average weekly hours and earnings. Table 18 presents data about Champaign-Urbana and Table 19 provides information about the State of Illinois.

From 1990 to 2000, Champaign-Urbana experienced the largest percent growth in the Transportation, Warehousing, and Utilities sector (82.4 percent) and the largest percent decline in the Federal Government sector (-48.3 percent) due to the closure of Chanute Air Force Base.

From 2000 to 2009, Champaign-Urbana experienced the largest percent growth in the Wholesale Trade sector (42.9 percent) and the largest percent

decline in the Manufacturing's Durable Goods sector (-38.3 percent).

In comparison, from 1990 to 2000, the State of Illinois experienced growth in the Professional and Business Services sector (45.9 percent) and a decline in the Federal Government sector (-11.0 percent). From 2000 to 2009, Illinois experienced the largest percent growth in the Educational and Health Services sector (20.0 percent) and the largest percent decline in the Manufacturing's Durable Goods sector (-38.1%).

For both tables, all numbers are rounded to the hundreds so categories may not add correctly due to rounding. Industry sector coding was changed to the North American Industry Classification System (NAICS) in 2001. The average annual labor force total presented in Tables 18 and 19 are configured using NAICS.

Detailed information about the NAICS sectors for the CES Program is available at the following website: <http://stats.bls.gov/ces/cesseriespub.htm>.

RETAIL SALES

Retail Sales Volume

Table 20 presents the 2010 sales volumes for Champaign County, select municipalities, and unincorporated areas in Champaign County. Sales volume was calculated using sales tax receipt and sales tax rate data from the Illinois Department of Revenue (IDOR). Sales tax receipts are reported by Standard Industrial Classification (SIC) code.

Several types of sales tax are reported by IDOR. The county tax (CT) and the municipal tax (MT) receipt totals were used to calculate the retail sales volume for Champaign County, municipalities, and the unincorporated area.

The county tax receipt amount is a 1 percent share of the statewide rate of 6.25 percent on general merchandise (equivalent to 16 percent of tax collections) and 100 percent of the tax collections of the 1 percent rate on qualifying food, drugs, and medical appliances for taxable sales made at businesses located within the unincorporated areas of the County.

The municipal tax receipt amount is the 1 percent share of the 6.25 percent statewide rate on general merchandise (equivalent to 16 percent of tax collections) and 100 percent of the tax collections of the 1 percent rate on qualifying food, drugs, and medical appliances for taxable sales made within the corporate limits of the municipality.

Figure 15: Retail Sale Volume for Champaign County - 2010

Source: Sales Tax Receipts by Standard Industrial Classification Code, Illinois Department of Revenue

Table 20 also presents sales volume per capita. Population totals for the locations are from Census 2010. Figure 15 illustrates the distribution of retail sales volume throughout the County.

Table 21 provides retail sales volume totals from 2006-2010 for Champaign County and several municipalities. Sales volume is categorized by the type of business making the sale.

Notes: Blank categories have less than 4 taxpayers. Data is not shown in order to protect the confidentiality of individual taxpayers. Totals include the censored data.

Sales Volume is calculated from municipal taxes. The municipal tax totals are 1% of the sales volume totals.

INCOME AND POVERTY

Income & Poverty

Income is reported through three separate statistics. Median income, as a measure, divides the income distribution into two equal groups, one having incomes above the median, and the other having incomes below the median. The per capita income is the average obtained by dividing the aggregate income of an area by the total population of the area.

The median family income provides a statistic for family households only. A family is defined by the Census Bureau as a group of two or more people who reside together and who are related by birth, marriage, or adoption.

The median household income provides a statistic for both family households and non-family households. A non-family household may consist of a group of unrelated people or one person living alone. The median family income is usually larger than the median household income because the median household income includes those persons living alone in which there is only a single-person income source. The median family income, on the other hand, has a larger percentage of households with multi-person incomes.

In Champaign County, the university student population tends to skew the household median income figures downward. Median family income is a better basis of comparison to other communities than either median household income or per capita income for the county. Table 22 and Figure 16 further illustrate this point by comparing the median and per capita incomes of Champaign-Urbana MSA to other metro areas in the state.

Table 23 and Figures 17 and 18 provide the number and percent of households and families with respect to their income range. Income ranges are not directly comparable between years because the ranges cannot be adjusted for inflation. However, general trends can be identified. The actual number of households and families earning less than \$10,000 increased overall but decreased for other low and middle income ranges (\$10,000 to \$50,000). The percentage of households and families earning low and middle income ranges (Less than \$10,000 through \$74,000) decreased while the percentage earning higher incomes increased. The greatest changes can be seen in the \$35,000 to \$49,999 and \$100,000 to \$149,999 ranges.

Notes: ▲ Denotes a MOE that is "Good" and has a 0%-20% Relative Reliability; ● Denotes a MOE that is "Fair" and has a 21%-50% Relative Reliability; ▼ Denotes a MOE that is "Poor" and has a 51%-100% Relative Reliability; ¹ % Population below poverty line = people below poverty line divided by population for whom poverty is determined and this population only includes those persons who do not reside in group quarters. People living in correctional facilities, nursing homes, mental hospitals, college dormitories, military barracks, group homes, missions, and shelters are considered a part of the group quarters population.

Table 24 also provides information about the population with income below the poverty level. This population only includes those persons who do not reside in group quarters. People living in correctional facilities, nursing homes, mental hospitals, college dormitories, military barracks, group homes, missions, and shelters are considered a part of the group-quarter population.

Figure 19 and Table 26 compares the three measures of income to other MSA's in the region.

The Census Bureau uses a set of money income thresholds that vary by family size and composition to decide who is poor. If the total income for a family or unrelated individuals falls below the relevant poverty threshold, then the family or individual is classified as being "below the poverty level." Poverty thresholds for 1999 and 2006-2010 are shown in Table 25. Information on poverty rates by race for Illinois, Champaign County, and the municipalities in Champaign County is presented in Table 27.

Figure 20: Percent of Population Below the Poverty Level by Race

Students Receiving Free or Reduced Lunches

The number of students receiving free or reduced cost lunches often serves as a commonly accepted proxy for measuring children in poverty.

While the Champaign School District has experienced fluctuations in the number of students participating in the free and reduced cost lunch program, the Urbana School District has experienced regular increases in the number of students participating in the program.

Overall, school districts serving Champaign County have experienced an increase in the number of students participating in the program. The data represents the students participating in this benefit program. Additional eligible students may be enrolled but not participating because of perceived stigma, lack of understanding, or other factors; however, no data is available for these students.

Farm Income & Expenses, and Personal Income by Type & Industry

Information for Table 29 and Table 30 was acquired from the U.S. Department of Labor Statistics, Bureau of Economic Analysis.

The tables present estimated data for 1990, 2000 and 2007-2009. All dollar estimates are not adjusted for inflation.

The estimates of earnings in Table 31 are based on the 2002 and 2007 North American Industry Classification System (NAICS).

Additional definitions, years, and categories can be accessed through the Bureau of Economic Analysis website at <http://www.bea.doc.gov/bea/regional/reis/>.

Source: U.S. Bureau of Economic Analysis, Regional Economic Information System, available online at: <http://www.bea.doc.gov/bea/regional/data.htm>.

Notes: ¹ Nonfarm personal income is total personal income less farm income; ² Farm income is farm earnings less farmer employer contributions for social insurance; ³ Census Bureau midyear population estimates. Estimates for 2000-2009 reflect county population estimates available as of April 2010. For more information, see the explanatory note at: <http://www.bea.gov/regional/docs/popnote.cfm>; ⁴ Per capita personal income is total personal income divided by total midyear population; ⁵ Contributions for government social insurance are included in earnings by type and industry, but they are excluded from personal income; ⁶ The adjustment for residence is the net inflow of the earnings of inter-area commuters. For the United States, it consists of adjustments for border workers and for certain temporary and migratory workers: Wage and salary disbursements to U.S. residents commuting or working temporarily outside U.S. borders less wage and salary disbursements to foreign residents commuting or working temporarily inside U.S. borders; ⁷ Rental income of persons includes the capital consumption adjustment; ⁸ Proprietor's income includes the inventory valuation adjustment and the capital consumption adjustment.

All state and local area dollar estimates are in current dollars (not adjusted for inflation).

COST OF LIVING

Consumer Expenditures

The Bureau of Labor Statistics (BLS) publishes data about the portions of total expenditures (as percentages) that are allotted to each expenditure category. The pie-graph on the right shows a summary of the relative importance of each expenditure category for all urban consumers in the United States for the month of December 2010.

Figure 21: Relative Importance of Each Expenditure Category for December 2010: U.S. Summary

Source: Bureau of Labor Statistics, U.S. Department of Labor retrieved December 2011.

Cost of Living Index

The American Chamber of Commerce Researchers Association (ACCRA) produces a Cost of Living Index to provide a useful and reasonably accurate measure of living cost differences among urban areas. Table 32 displays cost of living information for Champaign-Urbana and other selected urban areas in Illinois. The ACCRA Index is produced quarterly.

Each quarterly report is a separate comparison of prices at a single point in time, and both the number and the mix of participants may change from one quarter to

the next. Thus, index data from different quarters cannot be compared. It is important to note that the ACCRA Cost of Living Index does not measure inflation (price change over time). The average for all participating places equals 100, and each participant's index is read as a percentage of the average for all places. For example, Grocery costs in Champaign-Urbana is 94.7% of the average cost across the nation. Utilities are 115.4% of the national average.

Additional information about ACCRA can be found at <http://www.accra.org/costofliving/index.cfm>.

Table 32: Cost of Living Index for 2011 Third Quarter

Location	Total 100%	Grocery 13.31%	Housing 29.27%	Utilities 10.22%	Transpor- tation 9.86%	Health 4.23%	Misc. 33.11%	Average Apt. Rent	Average Home Price
Champaign-Urbana	99.0	94.7	91.7	115.4	99.2	103.8	101.4	\$679	\$266,488
Chicago	114.4	115.7	133.6	99.0	113.1	107.3	102.9	\$1,375	\$370,167
Danville	89.7	91.7	71.0	115.2	112.7	93.6	90.1	\$589	\$210,000
Decatur	91.0	90.5	81.7	97.4	95.6	86.2	96.6	\$548	\$245,335
Peoria	95.5	95.0	86.7	98.3	110.6	93.5	98.3	\$629	\$256,225
Springfield	89.7	92.2	73.7	77.7	111.1	101.0	98.6	\$587	\$214,250

Source: ACCRA Cost of Living Index, 2011 3rd Quarter; Notes: The ACCRA Cost of Living Index measures relative price levels for consumer goods and services in participating areas. The average for all participating places equals 100, and each participant's index is read as a percentage of the average for all places. The index does not measure inflation (price change over time), and index data from different quarters cannot be compared. A weight for each component index appears below the column heading.

Consumer Price Index

A consumer price index measures a price change for a constant market basket of goods and services from one period to the next within the same city or for the Nation. In this instance, the consumer price index is measuring the price change for all Midwest urban consumers in cities between 50,000 and 150,000 people. Consumer price indices are presented on a semi-annual

basis for the following categories: food and beverage, housing, apparel, transportation, medical care, recreation, and education and communication. The indices are not seasonally adjusted and have a base year of 1997 at which the index equals 100 for all of the categories. The consumer price index is not a true cost of living index and should not be used for place-to-place comparisons.

Notes: Consumer Price Indices for the above categories are not seasonally adjusted, and represent Midwest urban consumers in cities with population between 50,000 and 150,000 people.

TRANSPORTATION

County-to-County Worker Flow

The county-to-county worker flow files are available through the U.S. Census Bureau's longitudinal Employer-Household Dynamics data series (<http://LEHD.did.census.gov/LED>). LEHD data combines federal and state data about employers and employees with Census Bureau data while protecting confidentiality.

Table 34a lists Counties where Champaign County workers reside. The table lists only those counties that have 600 or more residents working in Champaign County.

Table 34b lists counties where residents of Champaign County work. Only counties where 400 or more Champaign County residents work are listed.

Two maps, on page 61, illustrate the worker flow patterns of Champaign County. The map on the left presents the residence county of Champaign County workers for 2000, and the map on the right consists of the workplace county of Champaign County residents from 2006-2010.

Journey to Work

The following table of journey to work information is comprised of both mode of transportation and travel time to work.

The percentage of workers age 16 years and over that use public transportation to get to work increased in

the United States, Illinois, Champaign County, Champaign, Urbana and Savoy from 2000 to 2010. From 2000 to 2010, the percentage of people that carpool decreased in all selected geographies except for Mahomet, Rantoul and Savoy, where numbers increased or stayed the same.

Figure 23 below illustrates the differences in the mode of transportation to work for the United States, Illinois, Champaign County, Champaign, and Urbana.

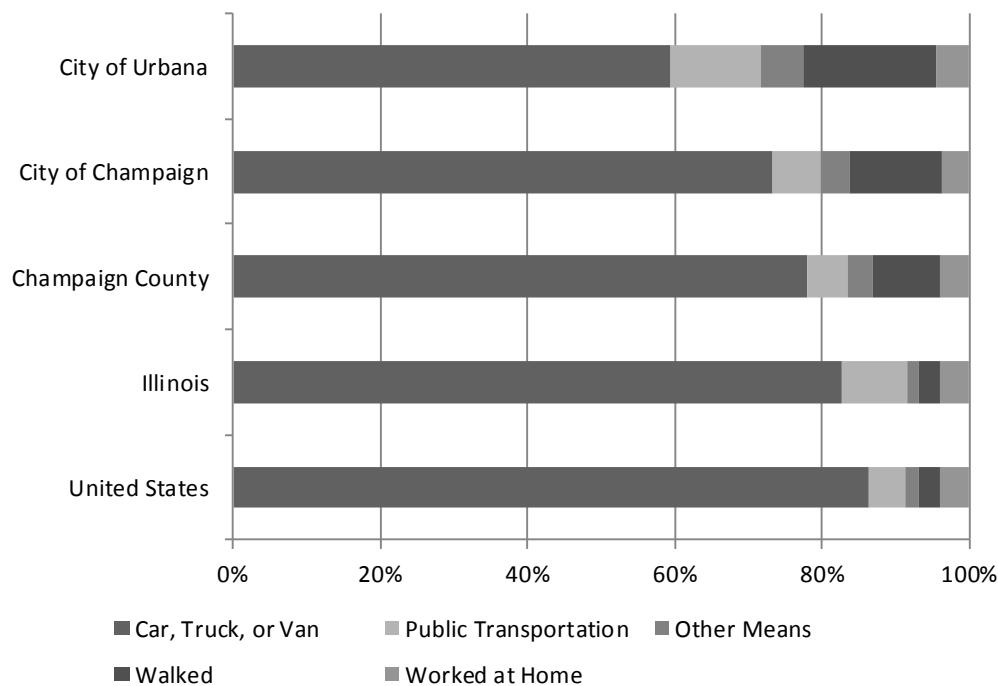

Public transportation includes the use of a bus, street car, trolley car, subway, elevated rail, railroad, ferryboat, or taxicab.

For the selected geographies, the City of Urbana has the highest percent use of public transportation at

12.4 percent. The City of Urbana also has the highest percentage of people who walk to work, with 17.9 percent, and the highest percentage of people who worked at home, with 4.6 percent. The United States has the highest percentage of workers who use a car, truck, or van to commute to work with 86.4 percent.

Table 36 provides road mileage statistics for Champaign County.

High Volume Road Segments

The busiest road segments (Annual Average Daily Traffic) in Champaign-Urbana for 2011 are presented in Table 37 and are reported through the Illinois Department of Transportation Traffic Count Maps.

Intersections with the highest number of crashes from 2004-2009 are presented in Table 38. Traffic crashes are monitored by the Illinois Department of Transportation and reported by the Champaign Urbana Urbanized Area Transportation Study.

Intersections are categorized as critical when both crash rates per volume of traffic and number of crashes reach a certain level. Seven of the eight are critical and indicated by bold face type.

MTD Ridership

Table 39 provides total ridership information for Champaign -Urbana MTD from 1985 to 2011. In 2011, the Champaign-Urbana Mass Transit District counted 10,549,120 passengers. Ridership trends indicate general growth. The sharp increase in ridership in 1990 is primarily due to the student fee implemented at the University of Illinois, giving students and faculty unlimited access to MTD bus services.

Table 40 and Figure 24 chart the greatest and least MTD ridership totals by month. The greatest ridership generally occurs in the month of February while the least monthly ridership occurs in the month of July. This generally correlates with harsh winter weather and University of Illinois student absence during summer months.

Table 39: MTD Ridership: 1985-2011

Figure 24: Highest and Lowest MTD Monthly Ridership in Champaign County

Amtrak Ridership and Enplanements at Willard Airport

Table 41 provides information on the number of Amtrak passengers that either boarded or disembarked in Champaign, Illinois from 1985 to 2011. Historic trends indicate a general decline in Amtrak ridership from 1979 to 1989 and stabilization thereafter. In 1986, the precipitous drop relates to a reduction in frequencies from three trains to two trains serving Champaign. The fluctuations after that relate mostly to Amtrak's up and down financial condition and threats of eliminating service. In 2011, 158,657 Amtrak passengers either boarded or disembarked at the Illinois Terminal.

Figure 25 at the top of the next page further

illustrates the trends in Amtrak ridership from 1985 to 2011.

In air service, the term enplanements is used to identify the number of persons that board a plane. Table 42 provides information on the number of enplanements at Willard Airport from 1985 through 2010, and the data is graphically presented in the Figure 25 along with Amtrak boardings. Air travel peaked in 1990, when 179,726 people boarded planes at Willard Airport. By 2010, enplanements total 55,036 marking a 69.4 percent decrease in air travel via Willard Airport from 1990.

Intercity Public Transit

Table 43 provides information on the daily departures from Champaign-Urbana. These are destinations that can be reached without transferring to a different plane, train, or bus.

Daily departures from the University of Illinois Willard Airport are those as of January 30, 2012.

Amtrak passenger rail service is provided to area residents via the Illinois Terminal. The Illinois service runs between Chicago and Carbondale twice daily, and the City of New Orleans services runs between Chicago and New Orleans, stopping in Champaign once daily in each direction.

The intercity buses column includes information about Greyhound Lines and Megabus current as of January 2012.

Other charter bus options are available on a limited basis. The Bluebird Charter Coach provides daily service between Willard Airport, Illinois Terminal, Village of Rantoul, Bradley, O'Hare Airport and Midway Airport in Chicago.

The Suburban Express service between Champaign-Urbana and Chicago caters to the University of Illinois students. The buses run most frequently on weekends during the school year; however, it does offer limited trips during the week.

The Lincolnland Express (LEX) provides transportation from Champaign via Danville to Indianapolis and from Champaign via Rantoul and Kankakee to Chicago Hourly service is available between Bloomington Airport and Champaign.

MAPS

Distributions by Race

Pages 56 through 63 contain separate maps on the distribution of the African American or Black population, the Asian population, the Hispanic population, and the White population in Champaign-Urbana and Rantoul. The maps were created by dividing the number of people of a particular race or ethnicity in a block by the total number of residents in the same block. Thus, for each block a percentage of Black or African American, Asian, Hispanic, and White was calculated. These blocks were then classified into the five following categories:

- 0% of the race or ethnicity
- Greater than 0% to 20% of the race or ethnicity.
- 20% to 40% of the race or ethnicity.
- Greater than 40% of the race or ethnicity.
- No data; there is no residential population in the census block, or none of the persons living in the census block were counted in the 2010 Census.

All four race distribution maps are classified into these same five categories, making each map comparable to another.

When viewing these maps, it is important to keep in mind that the number of people in each block is not the same. A block containing one person would be classified as having 100% of any particular race or ethnicity. A block could be incorrectly classified if not all the persons living in the block were counted in the 2010 Census.

Measure of Diversity

A map of the measure of diversity in Champaign-Urbana, Mahomet and Rantoul is presented on page 59. In creating this map, an attempt was made to show the racial diversity of the population without defining the exact race or ethnicity of the census block. All of the race categories were used. White alone, Black or African American Alone, American Indian and Native Alaskan Alone, Asian Alone, Native Hawaiian and Other Pacific Islander Alone, Other Race Alone, and Two or More Races. The number of people in each of the above seven race categories was divided by the total number of persons in each census block. Thus, a percentage of White, a percentage of Black or African American, a percentage of Asian, etc. was created for each census block. After the percentages were calculated, each census block was categorized into the five following designations based on the highest percentage of any of the seven race categories. Each designation was assigned a number and that number is represented on the map.

- Greater than or equal to 95% of any one race.
- 75% to 95% of any one race.
- 50% to 75% of any one race.
- No more than 50% of any one race.
- No data; there is no residential population in the census block, or none of the persons living in the census block were counted in the 2010 Census.

Each of the five maps on race and ethnicity presents data by block from the U.S. Census Bureau Census 2010 Summary File 1. This file contains 100 percent counts of the population, and all data is published regardless of the number of people that reside in each block.

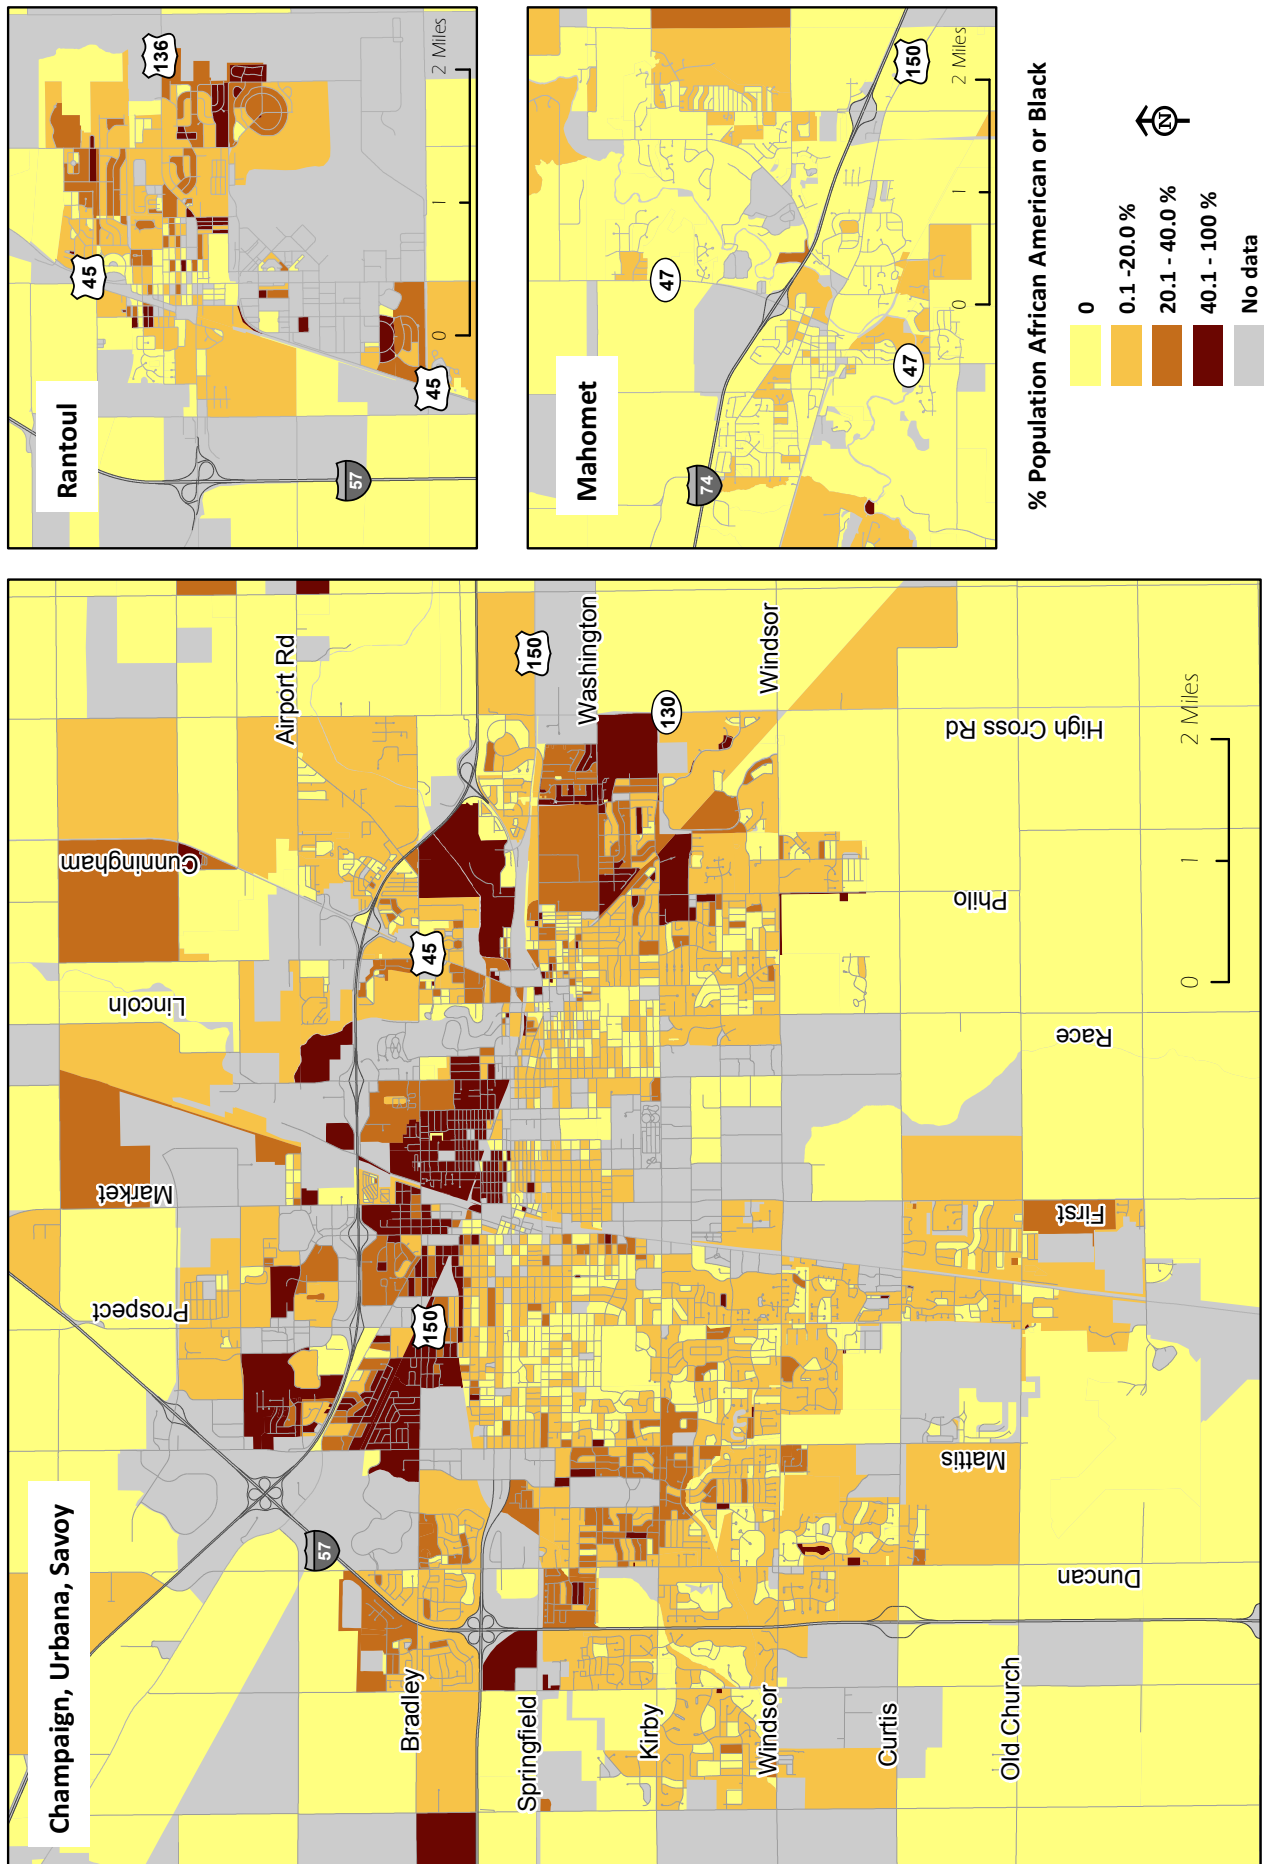

Population Density of Champaign County

The population density map on page 62 was calculated by dividing the number of people in each census block by the land acreage of each census block. Densities are classified using a quintile method in which each of the five categories contain the same number of census blocks. Census blocks with population totals of zero were classified separately in a "No population" category.

Population Density of Champaign County

Population density is calculated by dividing the number of people in each Census Block by the land acreage of each Census Block. Data is classified using the Natural Breaks (Jenks) method which separate blocks into statistically similar categories.

HOUSEHOLDS AND FAMILIES

Household and Family Composition

Household and family information is compiled by the U.S. Census Bureau. A **household** includes all the people who occupy a housing unit as their usual place of residence. Households can be divided into two groups: non-family households and family households. A **family household** consists of two or more people living in the same household who are related by birth, marriage, or adoption. A **non-family household** consists of a person living alone or persons living together who are not related.

The graphs presented in Figure 27 distinguishes

family households from non-family households and further separates family households into families with children and families without children. Data is presented for Champaign County for 2000 and 2010.

From 2000 to 2010, the number of individuals living alone increased to 33.2 percent from 31.4 percent. Family households comprised of a married couple with children decreased from 19.5 percent to 15.9 percent, while the percentage of female-headed and male-headed family households did not see a significant increase.

Bureau

Table 44 and Figure 28 show household type by Race and Ethnicity for Champaign County as a whole. Persons of Hispanic origin are included in the table under their selected race category as well as Hispanic ethnicity. The federal government considers race and Hispanic origin to be two separate and distinct concepts. A person who is Hispanic can be of any race.

Table 45 corresponds with figure 29 showing household composition for Champaign County and selected municipalities within Champaign County.

EDUCATION

Private School Enrollment

The U.S. Census Bureau acquires statistics on school enrollment by level of school and by type of school for the population age three years and older. The level of school is broken down into three categories: pre-primary schools (includes nursery school, preschool, and kindergarten), elementary and high schools (includes grades 1 through 12), and colleges (includes any college enrollment). The level of school is summarized into three categories for comparison purposes for the years

1980, 1990, 2000, and 2010. School type is either private or public, and private school totals include those that are church related. As can be seen in Table 46, private pre-primary school enrollment has increased in Champaign County, Illinois and the United States. Private elementary and high school enrollment has increased in both Champaign County and the United States while it decreased in Illinois from 1980 to 2010.

Table 46: Percentage of Students Enrolled in Private Schools in the United States, Illinois, and Champaign County: 1980, 1990, 2000, 2006~2010

	1980	1990	2000	2006~2010
United States (US)				
Pre-primary School	36.3%	40.5%	32.0%	▲45.8%
Elementary or High School	10.5%	9.8%	10.4%	▲11.2%
College	19.5%	22.9%	25.4%	▲24.0%
Illinois (IL)				
Pre-primary School	33.5%	38.9%	30.8%	▲40.5%
Elementary or High School	14.6%	13.8%	12.7%	▲12.3%
College	24.3%	27.4%	30.6%	▲36.5%
Champaign County (CC)				
Pre-primary School	27.3%	33.9%	33.2%	▲45.4%
Elementary or High School	4.7%	6.6%	10.1%	▲10.6%
College	0.9%	3.4%	2.4%	▲3.2%

Local Enrollment Statistics

The Illinois State Board of Education produces yearly Report Card Summaries for schools and school districts in Illinois. The Report Cards include data on student enrollment, instructional settings, school district finance, academic performance, and performance on state assessments. Data is easily accessible on the Illinois Interactive Report Card website: <http://iirc.niu.edu/>

Tables 50 and 51 provide local school district information on total enrollment, races, grades, low-income rates, limited English proficiency rates, high school dropout rates, chronic truancy rates, mobility rates, attendance rates, average class size, composite ACT scores, and pupil teacher ratios. Several of the categories are defined below.

Low-income students come from families that receive public aid, live in institutions for neglected or delinquent children, are supported in foster homes with public funds, or are eligible to receive free or reduced-price lunches.

Limited English proficiency students are those eligible for transitional bilingual programs.

Dropout rate is the number of dropouts divided

by the fall enrollment less post-graduates multiplied by one hundred. Dropouts include students in grades 9-12 whose names have been removed from the district-housed roster for any reason other than death, extended illness, graduation/completion of program studies, transfer to another public/private school, or expulsion.

Chronic truancy rate is the number of chronic truants divided by the average daily enrollment multiplied by one hundred. Chronic truants include students subject to compulsory attendance who have been absent without valid cause from such attendance for eighteen or more of the previous one hundred eighty regular attendance days.

Mobility rate is based on the number of times students enroll in or leave a school during the school year.

Student attendance rate is the aggregate days of student attendance divided by the sum of the aggregate days of student attendance and aggregate days of student absence multiplied by one hundred.

Notes: -- Indicates that data is not available. 1 Overall Illinois Standard Achievement Test Performance

University and College Enrollments

Between 2000 and 2011, the University of Illinois increased its enrollment by over 15 percent, and Parkland College increased its enrollment by almost 17 percent.

The University of Illinois is currently experiencing its highest enrollment. The number of students that enrolled in the fall of 2011 was 42,606.

Parkland College's greatest enrollment of 9,752 students occurred in the fall of 2005. The enrollment for Fall 2011 was 9,368 students. Tables 53 and 54 provide enrollment figures as of the tenth day of class in each fall semester. The information was obtained each fall semester. The information was obtained from the Division of Management Information at the University of Illinois, and the Office of Institutional Research and Evaluation at Parkland College.

CHILD CARE

Available Child Care

The information in Table 55 and Figure 32 is from the Child Care Resource Service (CCRS) database and includes Family Child Care homes and Child Care Centers which includes preschools, before and after school programs, camps and other arrangements. The CCRS is a program of the Department of Human and Community Development and UI Extension at the University of Illinois. Child care centers are non-residential facilities serving different ages of children, and usually have several classrooms. Family child care providers are caregivers who provide care in their own home with a smaller group of children of different ages.

Table 56 illustrates the number and percent of child care providers by age in Champaign County, and includes data for all of the Child Care Resource Service (CCRS) database, including centers, family child care homes, preschools, before and after school programs, camps and other arrangements.

There are 11,658 children ages 0 to 4 in Champaign County as of 2010, according to the U.S. Census Bureau. This is an increase of 1,241 (11.9%) from Census 2000.

The number of space available in Head Start and other child care programs are presented in Table 57.

CRIME

Crime Offenses and Rates

Table 58 provides the crime offense rates per 100,000 persons for Illinois and Champaign County from 2000 to 2009. Crime offense rates are the number of offenses divided by the population total for that year. This number is then multiplied by 100,000. The offense rates depend on the total as well as the number of offenses.

Crime offense rates have declined in both Champaign County and Illinois between the years 2000 and 2009. From 2000 to 2009, the crime offense rates for robbery and burglary have decreased for both Champaign

County and Illinois. Arson rates increased for Champaign County from 2000 to 2009.

The Champaign County crime offense rates and totals include the following departments: Champaign County Sheriff's Office, Police Departments of Champaign, Fisher, Gifford, Homer, Ludlow, Mahomet, Ogden, Rantoul, Thomasboro, Tolono, Urbana, Parkland College, and the University of Illinois.

Table 59 consists of the total number of crime offenses committed for the years 1997 through 2009.

Juvenile Arrests

The number of juvenile arrests for 2009 are presented in Table 59. In 2009, approximately 31 percent of juvenile arrests were for traffic violations, marking the highest number of arrests for identified categories. Additionally, 26 percent of juvenile arrests were for the charge of bodily harm. Theft offenses and drugs and weapons charges amounted to 11 percent of juvenile arrests. The data for juvenile arrests can be found through the Illinois State Police website at <http://www.isp.state.il.us/crime/ucrhome.cfm>.

Drug Arrests

Drug arrests are presented in Table 61 for the years 1999 to 2009. Each drug arrest is classified by the statute that has been violated. Overall, the number of drug arrests in Champaign County has decreased. Champaign County totals include the following jurisdictions: Champaign Sheriff's Office, Police Departments of Champaign, Fisher, Gifford, Homer, Ludlow, Mahomet, Ogden, Rantoul, Thomasboro, Tolono, Urbana, Parkland College, and the University of Illinois. Information about drug arrests is compiled by the Illinois State Police Department and is available on line at www.isp.state.il.us/crime/ucrhome.htm.

VITAL STATISTICS

Selected Births and Death Statistics

Table 62 and Figure 33 provide information on the number of births and deaths in Champaign County from 1990 to 2009. The number of births in Champaign County continuously exceeds the number of deaths, yet the

difference between the number of births and deaths tends to be declining despite year to year fluctuations. Table 63 highlights selected birth characteristics in Illinois and Champaign County for the year 2009.

Table 62: Births and Death Totals in Champaign County: 1990-2009

Table 64 provides information on prenatal care by race for 2000 to 2006. Table 65 shows trends of the number of low birth weight babies born in Champaign County from 2000 to 2006.

Table 66 on the following page includes Infant Mortality Rates per 100,000 Live Births by Race in Champaign County for 1990, 2000, and 2005 to 2009 as well as the demographics of death and causes of death for Champaign County. Infant mortality is a measure of overall maternal and child health and reflects social conditions such as poverty, poor nutrition, lack of education, and inadequate medical care. Low birth weight, premature

birth, and birth defects are among the leading causes of infant death and also increase the risk for developmental and learning disabilities, impaired vision, and other health problems.

In 2007, Champaign County's rate of 6.8 deaths per 1,000 live births was slightly higher than the state's rate of 6.73. Infant mortality in Champaign County varies greatly depending on race.

Tables 66 and 67 contain information on the causes of death by race for Champaign County for 2006 and the demographics of deaths in Illinois and Champaign County for 2008.

NATURAL RESOURCES

Temperature and Precipitation

This section provides climate and weather information for Champaign County, Illinois. The information is from the Illinois Climate Network, which provides enhanced temporal weather observations on atmospheric pressure, air temperature, relative humidity, wind speed and direction, solar radiation, precipitation, and soil temperatures. The Illinois Climate Network is a 19-station array of automated weather sites scattered across Illinois and operated by Illinois State Water Survey staff. Two sites are located in Champaign County. One is in Champaign, and the other is in Bondville. Data from the Champaign site is presented here.

Table 69 provides information for Champaign, Illinois for the year 2011. Heating and cooling degree days measure the extent to which temperatures fall below or above 18.3 C or 65 F. For example, if the average

temperature on a given day was 47 F, 65 minus 47 equals 18 heating degree days. An average temperature of 82 F would equal 17 cooling degree days. These daily figures are summed for the month and year and give an indication of the need for artificial heating or air-conditioning.

Table 70 contains the average precipitation totals and average temperatures by month for January to December while other averages from 1981 - 2010 are shown in Table 71.

Information about average wind direction, and prevailing wind speed over the period of time from 1981 to 2010 is included in Table 71.

Details about the Illinois Climate Network, the Illinois State Water Survey, and the Water and Atmospheric Resources Monitoring Program is available online at www.sws.uiuc.edu/warm.

Soils and Farmland

Table 72 lists the most prominent soils found in Champaign County. Data is presented on the number of acres, percent of land occupied, slope, important farmland determination, productivity index, and limitations. Information was gathered from the Champaign County Land Evaluation and Site Assessment System 2012 and is based on data contained in the Champaign County Soil Survey, USDA, 1978.

The productivity indices for major grain crops express the estimated yields as a percentage of the average yields obtained under basic management. Soil productivity is strongly influenced by the capacity of a soil to supply the nutrient and soil-stored water needs of a growing crop in a given climate.

Prime farmland is land that is best suited for food, feed, forage, fiber and oil seed crops. It may be cropland, pasture, woodland, or other land, but it is not urban, built up land, or water areas. It is either used for food or fiber or is available for those uses. Prime farmland produces the highest yields with minimum inputs of energy and economic resources, and farming it results in the least damage to the environment. Prime farmland has an adequate and dependable supply of moisture from precipitation or irrigation. The temperature and growing season are favorable. The level of acidity or alkalinity is acceptable to water and air. It is not excessively erodible or saturated with water for long periods and is not frequently flooded during the growing season.

Table 72 identifies the major soils of Champaign County. The soil series “Drummer” accounts for almost 40 percent of the land in Champaign County. Other soil series in Champaign County include: Flanagan (15.7%), Elliot (4.8%), Ashkum (4.6%), Dana (3.6%), Raub (3.6%), Elburn (2.8%), Catlin (2.7%), Brenton (2.6%) and Varna (1.3%). The majority of the soil series are deemed “Prime”

with the exception of Drummer and Ashkum. The soil series Drummer and Ashkum are “Prime if Drained.” All soil series have some type of limitation. The most common forms of limitations are susceptibility to erosion and excess water.

Table 72: Major Soils in Champaign County

Soil Series	Acres	% of Land	Slope	Important Farmland Determination	Productivity Index Local	Limitations
Drummer	254,484	39.8	0-2	Prime if Drained	144	some limitations, excess water is the dominant hazard or limitation
Flanagan	100,553	15.7	0-2	Prime	144	few limitations that restrict use
Elliot	30,730	4.8	0-6	Prime	125	some limitations, susceptibility to erosion is dominant problem
Ashkum	29,196	4.6	0-2	Prime if Drained	127	some limitations, excess water is the dominant hazard or limitation
Dana	22,974	3.6	2-5	Prime	131	some limitations, susceptibility to erosion is dominant problem

AGRICULTURE

Acreage, Yield, & Production of Commodity Crops

Champaign County is the fifth largest county in the State of Illinois, and is usually one of the top ten producers of corn and soybeans in Illinois. Table 74 highlights acres harvested, yield and production of corn, soybeans and wheat in Champaign County from 2005 to 2010.

Additional information about crop acreage, yield, and production is available from the Illinois Agricultural Statistics Service at <http://www.agstats.state.il.us/website/reports.htm>.

Table 74: Acreage Harvested, Yield, and Production of Commodity Crops in Champaign County: 2005-2010

Number of Farms, Land in Farms, and Average Farm Size in Illinois

The number of farms, land in farms, and the average farm size are calculated by the United States Department of Agriculture in the Census of Agriculture. The census is taken every five years and is coordinated by the U.S. Department of Commerce, Bureau of the Census. Table 78 presents the number of farms, land in farms, and average farm size totals for both Champaign County and Illinois for 1978, 1992, 1997, 2002, and 2007. Figure 34 plots an index of each of the three categories in which the base year is 1978, and each category in this year is given an index number of 100. The number of farms in Champaign County and Illinois increased by 8.1 percent and 5.2 percent respectively, from 2002-2007. The average farm size decreased for both Champaign County and Illinois by 10.7 percent and 7.0 percent, respectively. The total

acreage in farmland also decreased for both Champaign County and Illinois by 4.6 percent between 2002 and 2007 and 2.0 percent in Illinois from the same time period.

A farm is defined as any place from which \$1,000 or more of agricultural products were produced and sold, or normally would have been sold, during the census year. This definition was first used in the 1974 census and has been used in all subsequent censuses.

Information about the Census of Agriculture is available at <http://www.nass.usda.gov/census>.

From 1978 to 2007, the number of farms increased while the acreage in farmland and average farm size decreased. The changes that occurred during this time period are further illustrated in Tables 78 and 79 and

Source: USDA National Agricultural Statistics Service, 1992 Census of Agriculture, 1997 Census of Agriculture, 2002 Census of Agriculture, and 2007 Agriculture; Notes: Data are based on a sample of farms.

Figure 35. Tables 79 and 80 show the number of farms and the acreage in farmland by size of farm in Champaign County. The most significant difference between the years

1978 and 2007 is the decline of farms 100 to 499 acres in size. The number of farms of 1,000 or more acres has steadily increased between 1987 and 2007.

MUNICIPAL FINANCE

Property Tax

Champaign County's property tax base value increased by \$1,518,236,470 from 2002 to 2010. The tax base is presented in terms of the equalized assessed value of the properties. Table 81 presents data from 2002 and 2010 for each component of the tax base.

The assessed value of tax increment financing properties increased by 188.6 percent since 2002 while enterprise zone abatement properties increased by 43.2 percent. State exemptions also increased by 103.7 percent. This results in an increase in general revenue base of 52.2 percent from 2002 to 2010.

The Equalized Assessed Values (EAVs) of Champaign County are presented in Table 82 for revenue years 2002, 2006, and 2010. The assessed values are

classified by type and include tax increment financing districts and enterprise zone abatements. Figure 37 shows annual change by land use type from 2006-2010.

The tax base includes all real property potentially subject to taxation, but excluding exempt property such as government or church property. The general revenue base is the remaining tax base that actually yields revenues for general government purposes after enterprise zones, TIF districts and state exemptions (e.g. Homestead exemptions) are subtracted.

Information was obtained from the Champaign County Clerk's Office, and the equalized assessed values have not been adjusted for inflation.

Table 81: Champaign County Property Tax Base: 2002 & 2010

	2002		2010		% Change 2002-2010

Figure 37: Assessed Value by Land Use: Revenue Years 2006-2010

Source: Champaign County Clerk's Office

Tables 83 and 84 present EAV for the municipalities and Townships in Champaign County by land use type. The types of land assessed include farm, industrial, commercial, residential, railroad, other state assessed, and other counties. The farm "A" category includes homesteads and farm residences while the Farm "B" category includes farm land, conservation land, wooded acreage transition, and farm buildings.

The EAV is the result of applying the state equalization factor to the assessed value of a parcel of property. Tax bills are calculated by multiplying the EAV (after any deductions for homesteads) by the tax rate. Except for farmland and other preferentially-assessed property, and property in Cook County, property in Illinois is assessed at 33 1/2 percent of its market value.

Farmland in Illinois is assessed on its agricultural economic value, not on its market value. A complex formula takes into account the soil productivity, market conditions, productions costs, and interest rates. Land is classified as farmland as long as it is cultivated, even if it is served by utilities, zoned and platted for development.

Property tax extensions by taxing bodies in Champaign County are shown in Table 85. There are a total of 187 taxing bodies in Champaign County.

Source: Champaign County Clerk's Office, September 2003 and February 2012. County Summary Abstract of Valuations, Levies, Tax Rates, and Tax Extensions: Revenue Years 2000, 2006, 2007, 2008, 2009, 2010.

Notes: 1 -- Denotes data that is not available 2 On November 5, 2002, the voters of Champaign County approved a Referendum to adopt an operating tax for the Champaign County Nursing Home. With the addition of the Nursing Home Operations Tax, the tax rate for the county increased from 62 cents per \$100 of assessed valuation in 2001 to 63.43 cents per \$100 of assessed valuation in 2002.

Aggregate tax rates are presented in Table 86 for the incorporated areas of Champaign County. This aggregation includes all of the rates for each taxing body within each municipal corporation. The taxing bodies within Champaign County include township and road districts, cities, villages and towns, school districts, fire protection districts, park districts, sanitary districts, library

districts, multi-township districts, cemetery districts, a forest preserve district, a mass-transit district, and a public health district. There are many tax codes and many tax code combinations for each municipal corporation within Champaign County. This table does not include all tax codes.

Municipal tax rates are presented in Table 87 for the municipalities in Champaign County for 2000, 2005, and 2010. Municipal tax rates are composed of rates for several funds. Each municipality has a different combination of fund for which rates are calculated. Several funds that can be found within municipalities in

Champaign County include general fund, audit, liability insurance, ESDA, pensions, library, capital improvements, social security, police protection, fire protection, Medicare, workers compensation, recreation, garbage, street and bridge, forestry, street lighting, IMRF, and unemployment insurance.

Table 88 gives the equalized assessed value (EAV), school tax rate per \$100, and expenditures for school districts in Champaign County. The EAV includes all computed property values upon which a district's local tax rate is calculated. Total school tax rate is a district's total tax rate as it appears on local property tax bills, and includes taxes for construction and capital improvements. Local property tax is one source of revenue for school districts. Other sources of revenue include other local funding, general state aid, other state funding and federal funding. Instructional expenditure

per pupil includes the direct costs of teaching pupils or the interaction between teachers and pupils. Operating expenditure per pupil includes the gross operating cost of a school education, bond principal retired, and capital expenditures including instructional expenditure.

Financial information for school districts is available through the Illinois State Board of Education and can be viewed online at <http://www.isbe.net/finance/default.htm>.

Tax Increment Financing and Enterprise Zones

Tax increment finance (TIF) districts are created by municipalities to foster development or redevelopment in areas that meet specified state criteria for “physical or economic deficiencies”. TIF districts in Champaign County have generated \$148,819,563 in revenues overall. Districts with the greatest increase includes Champaign I, Urbana III, Mahomet, and Tolono. Table 89 presents the values and base years of the TIF districts located within Champaign County. Information was obtained from the Champaign County Clerk’s Office.

Inside a TIF district, increased property tax revenue above the specified “base year” is set aside for use inside the district for capital improvements, lot consolidation, demolition, or other projects. A percentage of the increased revenue can be allocated to other local taxing

bodies that may be impacted by projects occurring in the TIF district including schools and libraries. The expectation is that the investment funded through the TIF will increase revenue and private investment beyond what would occur without the TIF. For more information on TIF districts, see <http://www.illinois-tif.com/>.

Enterprise Zones are another means by which local governments can foster development in defined areas that meet state criteria regarding poverty, unemployment and/or blight. Property taxes are abated on new construction for qualifying projects located within the enterprise zone. Building materials used for qualifying projects are exempt from state and local sales taxes. In some cases, additional incentives are also available.

Table 89: Champaign County TIF Districts: 2011

Name	Base Year	Base Value	2011 Total Assessed Value	Taxing Value After Exemptions	Tax Increment	District Increase
Champaign I	1980	7,545,086	30,237,030	30,029,960	22,484,874	23,397,410

Table 90 shows the abated values for Champaign County enterprise zones by taxing body for fiscal years 2003 and 2009. Information was obtained from the Champaign County Clerk's Office.

Champaign County has three enterprise zones: City of Urbana, Joint City of Champaign-Champaign County and Village of Rantoul. The Urbana and Rantoul zones were created by the respective municipalities. The

City of Champaign-Champaign County zone was jointly created and is jointly operated by the two governments. The state exempts eligible projects from sales tax on building materials and provides other incentives for certain projects. Table 91 summarizes the eligible projects and the incentives provided by local governments of the three zones.

Notes: ¹ Depends on number of full-time-equivalent jobs "created or retained"; ² Depends on number of full-time-equivalent jobs "created or retained" and on total new assessed valuation; ³ Created by separate County Ordinance (No. 307); ⁴ Depends on the total new assessed valuation

Sales Tax

Table 92 presents the general merchandise tax rates and the food, drug, and medical appliances tax rates for Champaign, Urbana, Unincorporated Champaign County, and all other municipalities within Champaign County. These rates are current as of 2012, and are subject to change January 1st and July 1st of each year.

Table 93 presents the sales tax revenues for each municipality of Champaign County and its unincorporated areas. The yearly dollar amount is the sum of the state sales taxes, state use taxes, municipal taxes, municipal home rule taxes, county taxes, countywide sales taxes, and special county retailers occupation taxes for public safety.

Table 92: Sales Tax Rates as of January 2012 in Champaign County

GLOSSARY

~ (tilde symbol)

This symbol is used to note multiyear year ranges associated with American Community Survey (ACS) data. This symbol will be shown in conjunction with a range of years (2006~2010) and indicates that the data is an average for that range of years. Instances where a range of years is shown as 2006-2010, data is shown for each year, 2006 through 2010. See ACS for more information about multiyear data estimates.

Alaska Native

Self-identification among people of Alaska Native descent. These are the five detailed Alaska Native race and ethnic categories used in displaying data from Census 2010: Alaska Athabaskan, Aleut, Eskimo, Tlingit-Haida, and all other tribes.

American Community Survey (ACS)

The American Community Survey is an ongoing survey coordinated by the U.S. Census Bureau. The survey provides demographic, social, economic, and housing data at regular intervals for geographies based on size of population. As a sample survey, the ACS has error associated with the estimates which are reported as the Margin of Error (MOE). See the MOE entry for more information. Additionally, the ACS reports statistics in single year and multiyear intervals. Multiyear intervals provide increased statistical reliability of data for less populated areas or population subgroups. Comparison of multiyear estimates should avoid overlapping years.

American Indian

Self-identification among people of American Indian descent. Many American Indians are members of a principal tribe or group empowered to negotiate and make decisions on behalf of the individual members. Census 2010 data are available in American FactFinder for 36 tribes or Selected American Indian categories: Apache, Blackfeet, Cherokee, Cheyenne, Chickasaw, Chippewa, Choctaw, Colville, Comanche, Cree, Creek, Crow, Delaware, Houma, Iroquois, Kiowa, Latin American (Aztec, Inca, Mayan, etc.), Lumbee, Menominee, Navajo, Osage, Ottawa, Paiute, Pima, Potawatomi, Pueblo, Puget Sound Salish, Seminole, Shoshone, Sioux, Tohono O'Odham, Ute, Yakama, Yaqui, Yuman, and All other. These tribes were selected based on a 1990 population threshold of 7,500.

Asian

Self-identification among people of Asian descent. These are the 17 detailed Asian race and ethnic categories used in displaying data from Census 2010: Asian Indian, Bangladeshi, Cambodian, Chinese except Taiwanese, Filipino, Hmong, Indonesian, Japanese, Korean, Laotian, Malaysian, Pakistani, Sri Lankan, Taiwanese, Thai, Vietnamese, and Other Asian.

Assessed Value

The value placed on property tax purposes and the basis for determining what portion of the overall tax burden each property owner will bear.

Attendance Rate

Student attendance rate is the aggregate days of student attendance divided by the sum of the aggregate days of student attendance and aggregate days of student absence multiplied by 100. (Illinois State Board of Education)

Block

A subdivision of a census tract (or, prior to 2000, a block numbering area), a block is the smallest geographic unit for which the Census Bureau tabulates 100-percent data. Many blocks correspond to individual city blocks bounded by streets, but blocks -- especially in rural areas -- include many square miles and potentially have boundaries that are not streets. The Census Bureau established blocks covering the entire nation for the first time in 1990. Previous censuses dating back to 1940 had blocks established only for part of the nation. Champaign County contained 7,268 blocks for Census 2010 and 5,838 blocks for Census 2000.

Block Group (BG)

A subdivision of a census tract (or, prior to 2000, a block numbering area), a block group is the smallest geographic unit for which the Census Bureau tabulates sample data. A block group consists of all the blocks within a census tract with the same beginning number. Example: block group 3 consists of all blocks within a Census Tract numbering from 3000 to 3999. In 1990, block group 3 consisted of all blocks numbered from 301 to 399. Champaign County contained 150 block groups for Census 2010 and 166 block groups for Census 2000.

Census Designated Place (CDP)

CDP is the abbreviation for Census Designated Place, a statistical entity defined for each decennial census according to U.S. Census Bureau guidelines, comprising a densely settled concentration of population that is not within an incorporated place, but is locally identified by a name. CDPs are delineated cooperatively by state and local officials and the Census Bureau, following U.S. Census Bureau guidelines. Beginning with Census 2000, there are no size limits.

Chronic Truancy Rate

The number of chronic truants divided by the average daily enrollment multiplied by 100. Chronic truants include students subject to compulsory attendance who have been absent without valid cause from such attendance for 18 or more of the previous 180 regular attendance days. (Illinois State Board of Education)

Confidence Interval (CI)

This is a statistical measure describing the uncertainty associated with a sample estimate. The interval is determined by taking the estimate and adding and subtracting the Margin of Error. The reported Confidence Level for ACS data is 90%. This means that we can expect 90% of the estimate confidence interval to include the population parameter. We expect that 10% of estimate confidence intervals will fall outside of the population parameter. Estimates can be adjusted to achieve higher confidence levels (95%, 99% are common) however this increases the confidence interval.

Consolidated Metropolitan Statistical Area (CMSA)

A geographic entity defined by the Federal Office of Management and Budget for use by federal statistical agencies. An area becomes a CMSA if it meets the requirements to qualify as a metropolitan statistical area, has a population of 1,000,000 or more, if component parts are recognized as primary metropolitan statistical areas, and local opinion favors the designation.

Consumer Price Index

A Consumer Price Index measures a price change for a constant market basket of goods and services from one period to the next within the same city (or in the nation). The consumer price index is not a true cost of living index and should not be used for place-to-place comparisons.

Cooling Degree Days

See Heating Degree Days.

Dropout Rate

The number of dropouts divided by the fall enrollment less post-graduates multiplied by 100. Dropouts include students in grades 9-12 whose names have been removed from the district-housed roster for any reason other than death, extended illness, graduation/completion of a program of studies, transfer to another public/private school, or expulsion. (Illinois State Board of Education)

Employed

Employed includes all civilians 16 years old and over were either (1) "at work" -- those who did any work at all during the reference week as paid employees, worked in their own business or profession, worked on their own farm, or worked 15 hours or more as unpaid workers on a family farm or in a family business; or (2) were "with a job but not at work" -- those who did not work during the reference week but had jobs or businesses from which they were temporarily absent due to illness, bad weather, industrial dispute, vacation, or other personal reasons. Excluded from the employed are people whose only activity consisted of work around the house or unpaid volunteer work for religious, charitable, and similar organizations; also excluded are people on active duty in the United States Armed Forces. The reference week is the calendar week preceding the date on which the respondents completed their questionnaires or were interviewed. This week may not be the same for all respondents.

Enterprise Zone Property Tax Abatement

Enterprise zone property tax abatement provides that any taxing district may order the county clerk to abate (that is, give up) any portion of its taxes on real property, or on any particular class thereof, located within a zone and upon which new improvements have been constructed or upon which existing improvements have been renovated or rehabilitated.

Equalized Assessed Value (EAV)

The equalized assessed value, or EAV, is the result or applying the state equalization factor to the assessed value of a parcel of property. Tax bills are calculated by multiplying the EAV (after any deductions for homesteads) by the tax rate.

Family

A group of two or more people who reside together and who are related by birth, marriage, or adoption.

Family Household

A family includes a householder and one or more people living in the same household who are related to the householder by birth, marriage, or adoption. All people in a household who are related to the householder are regarded as members of his or her family. A family household may contain people not related to the householders, but those people are not included as part of the householder's family in census tabulations. Thus, the number of family households is equal to the number of families, but family households may include more members than do families. A household can contain only one family for purposes of census tabulations. Not all households contain families since a household may comprise a group of unrelated people or one person living alone.

Gross Rent

The amount of the contract rent plus the estimated average monthly cost of utilities (electricity, gas, and water and sewer) and fuels (oil, coal, kerosene, wood, etc.) if these are paid for by the renter (or paid for the renter by someone else). Gross rent is intended to eliminate differentials that result from varying practices with respect to the inclusion of utilities and fuels as part of the rental payment.

Group Quarters (GQ)

The Census Bureau classifies all people not living in households as living in group quarters. There are two types of group quarters: institutional (for example, correctional facilities, nursing homes, and mental hospitals) and non-institutional (for example, college dormitories, military barracks, group homes, missions, and shelters).

Heating Degree Days

Heating and cooling degree days measure the extent to which temperatures fall below or above 18.3 degrees C. or 65 degrees F. respectively. Each day a number of heating or cooling degree days is calculated based on the difference between the average temperature for the day and 65 degrees F. For example, if the average temperature on a given day was 47 degrees F. it would represent 65 minus 47, or 18 heating degree days. An average temperature of 82 degrees F. would represent 17 cooling degree days. These daily figures are summed for the month and year and give an indication of the need for artificial heating or air-conditioning.

Hispanic or Latino origin

For Census 2000 and 2010: People who identify with the terms "Hispanic" or "Latino" are those who classify themselves in one of the specific Hispanic or Latino categories listed on the Census or ACS questionnaire—"Mexican," "Puerto Rican," or "Cuban"—as well as those who indicate that they are "other Spanish, Hispanic, or Latino." Origin can be viewed as the heritage, nationality group, lineage, or country of birth of the person or the person's parents or ancestors before the arrival in the United States. People who identify their origin as Spanish, Hispanic, or Latino may be of any race.

For the 1990 Census of Population and Housing: A self-designated classification for people whose origins are from Spain, the Spanish-speaking countries of Central or South America, the Caribbean, or those identifying themselves generally as Spanish, Spanish-American, etc. Origin can be viewed as ancestry, nationality, or country of birth of the person or person's parents or ancestors prior to their arrival in the United States.

Household

A household includes all the people who occupy a housing unit as their usual place of residence. A household can be classified as a family household or a non family household. A family household consists of two or more people living in the same household who are related by birth, marriage, or adoption. A non family household consists of a person living alone or persons living together who are not related.

Housing Opportunity Index (HOI)

The Housing Opportunity Index is an index calculated quarterly by the National Association of Home Builders that compares the median income in a locality with the median home price. The index is stated as the percent of population with the median income in the area that would be able to afford the median-price house.

Housing Unit

A house, an apartment, a mobile home or trailer, a group of rooms, or a single room occupied as separate living quarters, or if vacant, intended for occupancy as separate living quarters. Separate living quarters are those in which the occupants live separately from any other individuals in the building and which have direct access from outside the building or through a common hall. For vacant units, the criteria of separateness and direct access are applied to the intended occupants whenever possible.

Incorporated place

A type of governmental unit incorporated under state law as a city, town (except the New England states, New York, and Wisconsin), borough (except in Alaska and New York), or village and having legally prescribed limits, powers, and functions.

Institutionalized population

People under formally authorized, supervised care or custody in institutions at the time of enumeration. Generally, restricted to the institution, under the care or supervision of trained staff, and classified as “patients” or “inmates.”

Intercensal Estimates

These estimates have been developed by applying a mathematical formula to estimate annual population change. These are updated annually.

Limited-English-proficient students

This category includes those students who have been found to be eligible for bilingual education. The percent of limited-English-proficient students is the count of limited-English-proficient students divided by the total fall enrollment multiplied by 100. (Illinois State Board of Education)

Low-income students

Low-income students are pupils aged 3 to 17, inclusive, from families receiving public aid, living in institutions for neglected or delinquent children, being supported in foster homes with public funds, or eligible to receive free or reduced-price lunches. The percent of low-income students is the count of low-income students divided by the total fall enrollment multiplied by 100. (Illinois State Board of Education)

Margin of Error (MOE)

The margin of error represents the level of uncertainty due to sampling error. Sampling error occurs when data are based on a sample of the population instead of the entire population. This statistic is written as a single value and establish a range above and below the estimate. For example the data point is written as 750 (+/-62) meaning the range for that data point extends from 688 to 812. Margin of error is reported by the Census Bureau using a 90 percent confidence interval.

Median

This measure represents the middle value (if n is odd) or the average of the two middle values (if n is even) in an ordered list of data values. The median divides the total frequency distribution into two equal parts: one-half of the cases fall below the median and one-half of the cases exceed the median.

Median income

The median income divides the income distribution into two equal groups, one having incomes above the median, and other having incomes below the median.

Metropolitan Statistical Area (MSA)

A geographic entity defined by the Federal Office of Management and Budget for use by federal statistical agencies, based on the concept of a core area with a large population nucleus, plus adjacent communities having a high degree of economic and social integration with that core. Qualification of an MSA requires the presence of a city with 50,000 or more inhabitants, or the presence of an Urbanized Area (UA) and a total population of at least 100,000 (75,000 in New England). The county or counties containing the largest city and surrounding densely settled territory are central counties of the MSA by meeting certain other criteria of metropolitan character, such as a specified minimum population density or percentage of the population that is urban. MSAs in New England are defined in terms of minor civil divisions, following rules concerning commuting and population density.

Mobility Rate

Student mobility (turnover) reflects any enrollment change between the first school day in October and the last day of the school year. It is the sum of the students who transferred out and the student who transferred in, divided by the average daily enrollment multiplied by 100. Students are counted each time they transfer out or in during the reporting year. Thus, individual students may be counted more than once.

Multi-Family Units

Multi-Family Units include 1-unit attached, 2 or more units.

Native Hawaiian and Pacific Islander (NHPI)

Self-identification among people of the Native Hawaiian and Pacific Islander descent. These are the detailed Native Hawaiian and Pacific Island race and ethnic categories used in displaying data from Census 2010.

- Polynesian: Native Hawaiian, Samoan, Tongan, Other Polynesian
- Micronesian: Guamanian or Chamorro, Other Micronesian
- Melanesian: Fijian, Other Melanesian
- Other Pacific Islander

Non institutionalized population

Includes all people who live in group quarters other than institutions. Examples include college dormitories, rooming housing, religious group homes, communes, and halfway houses.

North American Industry Classification System (NAICS)

The NAICS is a framework for collecting and publishing industry information related to measuring productivity, unit labor costs, and the capital intensity of production, estimating employment-output relationships, constructing input-output tables, and other uses that imply the analysis of production relationships in the economy. NAICS divides the economy into twenty sectors. Industries within these sectors are grouped according to the production criterion. NAICS provides enhanced industry comparability among the three NAFTA trading partners, while also increasing compatibility with the two-digit level of the International Standard Industrial Classification (ISIC) of the United Nations. The NAICS replaces the Standard Industrial Classification (SIC) codes.

Occupied housing unit

A housing unit is classified as occupied if it is the usual place of residence of the person or group of people living in it at the time of enumeration.

Own children

A child under 18 years old who is a son or daughter by birth, marriage (a stepchild), or adoption. For 100-percent tabulations, own children consist of all sons/daughters of householders who are under 18 years of age and who have never been married; therefore, numbers of own children of householders may be different in these two tabulations.

Poverty

Following the Office of Management and Budget's (OMB's) Directive 14, the Census Bureau uses a set of money income thresholds that vary by family size and composition to detect who is poor. If the total income for a family or unrelated individual falls below the relevant poverty threshold, then the family or unrelated individual is classified as being "below the poverty level."

Primary Metropolitan Statistical Area (PMSA)

A geographic entity defined by the Federal Office of Management and Budget for use by federal statistical agencies. If an area meets the requirements to qualify as a metropolitan statistical area and has a population of one million or more, two or more PMSAs may be defined within it if statistical criteria are met and local opinion is in favor. A PMSA consists of one or more counties (county subdivisions in New England) that have substantial commuting interchange. When two or more PMSAs have been recognized, the larger area of which they are components then is designated a consolidated metropolitan statistical area (CMSA).

Race

Race is a self-identification data item in which respondents choose the race or races with which they most closely identify. In 1997, after a lengthy analysis and public comment period, the Federal Office of Management and Budget (OMB) revised the standards for how the Federal government would collect and present data on race and ethnicity. The new guidelines reflect "the increasing diversity of our Nation's population, stemming from growth in interracial marriages and immigrations." Thus for the Census 2000 and Census 2010, respondents were given the option of selecting one or more race categories to indicate their racial identities, whereas in prior censuses only one racial category could be selected by the respondent. Due to this change, Census 2000 and Census 2010 race data are not directly comparable with data from 1990 and previous censuses.

Relative Reliability

This is a measure of relative error that is used to compare estimates with different scales. When comparing absolute error, larger estimates have larger errors and may lead to inappropriate conclusions. Relative reliability is the same as the statistical coefficient of variation. In this statistical abstract, relative reliability is noted as symbols next to estimates.

- ▲ = Good relative reliability (0-20%)
- = Fair relative reliability (21-50%)
- ▼ = Poor relative reliability (50-100%)

Rural

Territory, population and housing units not classified as urban. "Rural" classification cuts across other hierarchies and can be in metropolitan or non-metropolitan areas.

Standard Industrial Classification (SIC)

Industry classification system that was used in Economic Censuses prior to 1997. This system identifies establishments by the principal activity in which they are engaged. SIC has been replaced by North American Industry Classification System (NAICS).

Single-Family Unit

A single-family unit includes detached homes and attached houses such as row houses and townhouses.

Tax Increment Financing

Tax increment financing is a financing technique that cities may use to pay for public improvements such as land assemblage, building demolition, utilities, streets, and sidewalks. Property owners in the project area pay their full share of taxes. However, taxes paid above the established base year goes into a special allocation fund used to finance public improvement costs.

Tenure

Refers to the distinction between owner-occupied and renter-occupied housing units.

Unemployed

All civilians 16 years old and over are classified as unemployed if they (1) were neither "at work" nor "with a job but not at work" during the reference week, and (2) were actively looking for work during the last four weeks, and (3) were available to accept a job. Also included as unemployed are civilians who did not work at all during the reference week, were waiting to be called back to a job from which they had been laid off, and were available for work except for temporary illness.

Urban

All territory, population and housing units in urbanized areas and in place of more than 2,500 persons outside of urbanized areas. "Urban" classification cuts across other hierarchies and can be in metropolitan or non-metropolitan areas.

January 2013 Corrections

The following corrections have been applied to the 2012 Champaign County Statistical Abstract.

**Table 2: Population Trends in Champaign County
Municipalities: 1970, 1980, 1990, 2000, and 2010 - Page 4**

- Rantoul 2010 Population is 12,941 not 12,338.
- Rantoul Avg. Annual % Change 1970-2010 is -1.65% not -1.26%.
- Rantoul Avg Annual % Change 2000-2010 is 0.02% not -0.45%.

Table 35: Journey to Work 2000 and 2006~2010 - Pages 45-47

- ACS estimates added for Bicycle mode
- ACS estimates revised for Other Means mode
- ACS estimate for Walked and Other Mean corrected for Champaign County

**Table 93: Total Amount of Sales Tax Reciepts for
Champaign County and its Municipalities - Page 108**

- Corrected annual totals for 2008, 2010, and 2011
