- Parcel Layer – A parcel layer must be accessible by URL through an ESRI REST service. A secondary address-only layer may also be provided for parcels that have more than one address. The layer(s) must be publicly accessible and may be secured with a username and password.

The configured parcel job will be available for the customer to run on-demand. If using the ARCGIS option or a delimited file that is accessible via FTP, the job may also be scheduled to run on a consistent basis (e.g., daily, weekly, monthly, etc.).

Map (GIS) Connector Setup

The Map Service must include a parcel layer with a designated field having parcel numbers that exactly match those provided in the Parcel Connector source data (this layer may be the same as that provided for the Parcel Connector if no authentication is required for access). Support for Feature, Tiled, and Web Map Services is not included.
