EXECUTIVE SUMMARY

Osprey Environmental Engineering, LLC. (Osprey) has completed a Phase I Environmental Site Assessment (ESA) for the parcel known as the Public Works Aggregate Yard, which is a part of the larger Fairfield Department of Public Works site, located at 183 Richard White Way in Fairfield, Connecticut. This assessment consisted of a site inspection, file searches of local and state records, an EDR Radius Map Database Search review of state and federal databases, a review of aerial photographs and other historic sources, and interviews with the subject parcel site contacts, Mr. Scott Bartlett, Superintendent, Department of Public Works - Operations, and Mr. Ron Manning, former Superintendent of Public Works Operations from June of 1977 through April of 2014. The Public Works Aggregate Yard, referred to in this report as "the parcel" is the 5.54 acre central southern portion of the site that contains stockpiles of recyclable fill material. The 124-acre site containing the parcel also contains the DPW facility, composting facility, former landfill, and bus storage yard, and is referred to as the "site". The site is situated along Richard White Way.

At the time the research was conducted, the findings of the Phase I Environmental Site Assessment were as follows:

- The parcel was supplied with a public utility electricity connection.
- There was no evidence of existing underground or aboveground fuel storage tanks on the subject parcel.
- No significant staining of the ground or other visible signs of contamination were present during the time of the inspection. Floor drains were not present in the trailer.
- Surface runoff from the outside waste sorting areas on the southerly portion of the parcel drained to a water quality treatment pond. Overflow from this pond was directed to the sanitary sewer.
- Documentation reviewed did not indicate that hazardous wastes had been generated on-site. The site did not appear to meet the definition of an "Establishment" under the Transfer Act as activities listed in the qualifying criteria were present. No outstanding orders or notice of violations pertaining to the subject parcel were identified during a review of municipal, state, or federal records.
- The parcel was located in a municipal public works area surrounded by a larger residential area. No documentation reviewed under the scope of the Phase I ESA indicated that any area properties had potentially impacted the environmental quality of the parcel.
- Asbestos containing building materials were not a concern as no permanent buildings were present on the parcel.
- The subject parcel had MSW, possibly as deep as 20', buried in an excavation and then covered with soil, concrete, and asphalt that was intended to be recycled. This base was added to over the years with soil, concrete, and asphalt from DPW projects over the ensuing years. The existing stockpile was gradually being reduced as it was mixed with clean fill for off-site reuse.

Significant data gaps were present in the research of this parcel under the industry standard scope for a Phase I site assessment and included:

- Information regarding the composition and depth of the base municipal solid waste layer was not available other than the general type and estimated depth.
- Information regarding the composition and depth of the layer of fill material above the MSW was not available other than it was referenced as being DPW project fill.

1.0 INTRODUCTION

1.1 Purpose of Study

The purpose of this Phase I Environmental Site Assessment (ESA) was to evaluate the potential of on-site contamination due to spills of oils or hazardous materials or wastes resulting from past and present parcel operations, land use activities, or from off site activities, as well as to identify other adverse environmental conditions present on-site.

1.2 Parcel Location and Ownership

The parcel was identified as the Public Works Aggregate Yard and was located at 183 Richard White Way in Fairfield, Connecticut. Town of Fairfield Tax Assessor's files identify the parcel as 183/153. The parcel was located along the southwestern side of Richard White Way. According to the Town of Fairfield Tax Assessors records, the Town of Fairfield owned the parcel at the time the research was conducted. Refer to Figure 1 for the parcel Location Map.

1.3 Date of Study

Authorization to proceed on this project was provided by the Fairfield Department of Public Works in accordance with an Osprey proposal. The site inspection was conducted on 13 May 2016.

1.4 Scope of Work

The following scope of work was performed in accordance with standard Osprey Environmental Engineering, LLC. (Osprey) due diligence Phase I ESA protocols and provides conclusions relative to the potential release of oils or hazardous materials on-site, the environmental liabilities associated with the parcel, and any other adverse environmental conditions that may be present.

- Historical aerial photographs (dated 1934, 1949, 1951, 1960, 1969, 1971, 1979, 1985, 1990, 1991, 1995, 2005, 2006, 2008, 2010, and 2012) and available Fairfield topographic maps were reviewed to evaluate previous parcel and area activities and occupants. Sanborn Fire Insurance maps were reviewed to evaluate previous parcel and surrounding area activities and uses. Town of Fairfield Tax Assessor and Clerk files were reviewed to trace ownership history.
- Pertinent Federal, State of Connecticut, and municipal records were reviewed for current and historical regulatory information concerning the subject parcel and nearby properties.
- A site inspection was conducted to view surface conditions for indications of spills of oils or hazardous materials, and other adverse environmental impacts. Osprey made limited observations of area properties. Conditions observed at the time of inspection have been recorded through photographic documentation. Copies of photographs taken at the time of inspection are appended.

Local officials and other knowledgeable persons that could be contacted were interviewed regarding on-site operations, land use, and historic incidents that may have adverse environmental impacts. An EDR Radius Map data base search of State and Federal records was conducted in accordance with Phase I ESA ASTM radius standards. A copy of the EDR report is appended.

The scope of work completed for this assessment did not include the sampling and chemical testing of soil or groundwater, potential polychlorinated biphenyl (PCB) containing fluids, potential lead-based paint, or potential asbestos-containing building materials. The scope of work did address conditions of the on-site buildings, if any, with respect to sumps, floor drains, hazardous

materials/waste storage areas, and other potential pathways to the environment according to the limitations outlined in this report.

1.5 Summary of Previous Environmental Site Assessments

No previous environmental reports were available for review.

2.0 CURRENT SITE AND AREA CHARACTERISTICS

The site inspection conducted by Osprey included visual observations of the site and limited observations of surrounding areas. The inspection n included observations of the presence/absence of surficial expressions of potential hazardous and regulated waste impacts to the parcel, such as spills, staining, dumping, stressed or dead vegetation, areas of subsidence, points of discharge, any visual evidence of disturbance to the ground surface, features associated with underground storage tanks, and other potential environmental impacts.

2.1 Site Description and Operations

The parcel was located on Richard White Way. The parcel was identified as the Public Works Aggregate Yard and was 5.54 acres in area. It was developed as a recycling yard for fill materials. A temporary trailer was present that served as an office. Site features included:

- A storage pile containing soil, concrete materials (catch basin tops, etc.), and asphalt materials.
- A crushing and screening area to process larger sized materials including concrete and asphalt into smaller effective size aggregate materials.
- Several large stockpiles of fill material to be shipped off-site.

The rest of the parcel contained dirt travel areas and vegetated borders. The overall site was developed with Department of Public Works buildings to the northwest, a school bus storage lot to the north-northeast, a waste recycling area to the north, a pond to the west, a composting lot to the east, and salt marshes to the south and southeast.

2.2 *Utilities*

The parcel was supplied with public utility electric service. Portable toilet facilities were available on site. The office trailer heated with electricity.

2.3 **Building Toxins**

Building toxins were not a consideration in this report since no permanent buildings were located on the parcel.

2.4 Underground/Aboveground Storage Tanks

Files did not indicate the presence of existing underground or aboveground storage tanks at the parcel, nor were there visible signs of any.

2.5 Geology/Hydrogeology

The parcel was elevated above the surrounding terrain and sloped down in all directions. The site elevation varied from sea level to approximately 50 feet above the surrounding area. The DEEP Drainage Basin Map indicates the parcel was in Basin 7000-09. Surficial material consisted of artificial fill. Groundwater flow was most likely toward the salt marshes and ponds along the borders of the site.

2.6 Groundwater and Surface Water Quality Classifications

The Water Quality Classifications Map of Connecticut (2011) indicates the parcel was located within a GB groundwater classified area. This classification is for groundwater that is presumed to be unsuitable for potable uses without treatment. Surface water in the watercourse running adjacent to the parcel was classified as being of SA quality, indicating it is suitable as a habitat for marine fish, other aquatic life and wildlife; shellfish harvesting for direct human consumption; recreation; industrial water supply; and navigation. The parcel was not within an aquifer protection area.

2.7 Hydrology/Wetlands/ Natural Diversity Data Base

Wetlands were not present on the parcel but tidal wetlands directly abutted it to the south and east. The parcel was partially within an identified Natural Diversity Database area, withing a hurricane Category 4 surge zone, and within the "coastal boundary". It was not in a flood zone.

2.8 Site Reconnaissance

Robert Grabarek of Osprey, visited the parcel on 13 May 2016. Visual observations of the parcel were made during the parcel and area reconnaissance and are discussed below. At the time of the inspection, the parcel was developed with an office trailer, crushing and transport machinery, a central stockpile and an associated drive that looped through the parcel providing access to the office trailer and other smaller stockpiles.

The grounds appeared to have no significant staining present. No staining or stressed vegetation was observed in the vegetated areas or along the watercourse/pond. No pits, lagoons, chemical storage tanks/drums, or other staining/deposits of non-soil materials were noted during the inspection other than those noted in this report.

2.9 Area Reconnaissance

A limited visual reconnaissance of the surrounding area revealed that the parcel is located in a larger municipal property surrounded by a residential area. Abutting properties observed at the time of inspection included:

- Pine Creek and salt marshes to the south
- A pond to the west
- A composting facility to the east
- A school bus lot to the north
- The town Department of Public Works facility to the northwest

No visual evidence of environmental areas of concern was identified on adjacent sites other than the closed landfill.

3.0 SITE AND AREA HISTORY

The offices of the Town of Fairfield visited to review documentation included: the Tax Assessor, Town Clerk, Fire Department, Planning & Zoning Department, Department of Public Works Building Inspection Division, and Conservation.

3.1 Historical Ownership and Street Files

On May 6th, 1955 the United States Army was granted a judgment for a Declaration of Taking that allowed them to buy ten properties that now make up the parcel, the pond, the old landfill, the

property that comprises the Department of Public Works, the waste recycling area, the school bus storage lot, the composting lot, the police and animal control, and the fire training school. The United States Army used this property to construct a Nike missile battery and control tower. Neither of these components was located on the parcel that is the subject of this Phase I investigation. The property as a whole was eventually turned over to the Town of Fairfield, but no records were found on file that indicate when this happened.

3.2 Pertinent File Review Research/Interviews

Town, State, and local research has indicated that the current overall property was originally made up of ten parcels that were purchased by the United States Army to be used as a Nike missile battery and control tower in May 1955. The site was used for this purpose from 1956 to March 1961. At some unknown date after this date, the ownership was transferred to the town of Fairfield. The western portion of the property operated as a landfill beginning in 1948. The landfill eventually spread to the east, including the parcel over the years until the landfill was closed in 1984. The parcel was in the active landfill where trash bags were buried. In the 1980s the parcel was used as a storage area for brush which was burned and covered with dirt.

Mr. Manning, former DPW Superintendent, indicated that development of the closed landfill, the parcel, and some surrounding DPW areas consisted of excavating and removing soils in the salt marsh to 10-20' below the water table, filling the excavations with municipal solid waste (MSW), and backfilling. The closed landfill continued to have MSW placed in layers alternating with cover material. The subject parcel had MSW, possibly as deep as 20', buried in an excavation and then covered with soil, concrete, and asphalt that was intended to be recycled. This base was added to over the years with soil, concrete, and asphalt from DPW projects over the ensuing years.

3.3 Aerial Photograph, Street Directory, and Sanborn Map Review

Sanborn Fire Insurance Maps were reviewed to determine historical surrounding area and parcel occupants. Additionally, aerial photographs were inspected for signs of large-scale staining, filling, dumping, or excavations at the parcel or in the vicinity, as well as for indications of other on-site activities.

Sanborn Maps

Sanborn maps were not available for review.

Aerial Photographs

Aerial photographs from the years 1934, 1949, 1951, 1960, 1969, 1971, 1979, 1985, 1990, 1991, 1995, 2005, 2006, 2008, 2010, and 2012 were reviewed. Aerial photograph observations are discussed below.

- In the 1934 photograph the whole site was vacant land. The pond that is currently to the west of the parcel was not present. Richard White Way was also not present. Reef Road and the beginnings of Longdean Road and Veres Street were present to the east and north. Buildings were present sparsely along Reef Road and Veres Street. A lone building was present at the southern point of Longdean Road. Pine Creek and Fairfield Beach Road were present to the south of the parcel. Old Dam Road E and Old Dam Road were present to the southeast. Houses were present on all the roads to the south and southeast.
- In the 1949 photograph Veres Street had been paved further west to its current length. The parcel remained vacant. A road stretching from Veres Street situated between Alden Street and James Street has been constructed that runs along the southwestern length of Richard White Way to where the sewage treatment plant is currently located. A long square area of land had been cleared that is roughly the same size and shape of the sewage treatment plant property. A residential structure sized building was located on this patch on the northeastern border. The streets to the north had been further developed with more residences. The house at the end of Longdean Road had been demolished leaving vacant land. Reef Road had been developed with more buildings as well. Oldfield Drive and Mona Terrace had been constructed and built up with residential type buildings.
- In the 1951 photograph the parcel was still vacant land. The cleared square patch that had been developed with what is currently the sewage treatment plant and the building that had been on the northwestern border was gone. A long rectangular patch of land had been cleared on the opposite side of the road where the sewage treatment plant was located. The properties to the north, northeast, south, and southeast appeared to have remained unchanged. Oldfield Drive and Mona Terrace had been further developed with more residential type buildings.
- In the 1960 photograph the parcel had been cleared and appeared to be an open lot with dirt roads leading through it and around the rest of the property. The pond that is currently located to the southwest was present. Landfill operations were present on the western portion of the property. Three large pits had been dug below the water table to the west and north of the large pond. The Department of Public Works (DPW) building was present on the northwestern portion of the property. The Nike Command Center had been constructed to the south-southeast of the sewage treatment plant. Richard White Way (One Rod Highway) was no longer connected to Veres Road. The road had been extended northeasterly to Reef Road as it currently is today. Forest Avenue had been constructed parallel to Reed Road and had been built up with residential type buildings. Longdean Road was partially present where it connects with Cummings Avenue. Residential type buildings had been constructed partway down Veres Road on the southern side. The properties to the south and southwest appeared to remain unchanged. Sullivan Place was present to the northwest and the senior center had been constructed.
- In the 1969 photograph the southern portion of the parcel had been dug out below the water table creating a pond. The northern portion was used as a landfill area. The two ponds to the west of the large pond had been filled in with waste and covered over with fill material. The parking lot of the DPW building had been extended to the southeast of the building. The rest of the property

- appeared to remain unchanged. Longdean Road had been extended further southeast and more residential type buildings had been constructed on both sides of the road. The surrounding properties to the north, northwest, south, and southeast appeared unchanged.
- In the 1971 photograph the pit on the southern portion of the parcel had been filled in. The northern portion of the parcel had been covered over with fill. Directly to the east of the parcel a large rectangular hole had been dug. On the property to the southeast of the parcel earth materials were stored in two rectangular areas adjacent to Pine Creek. A new silo had been added to the sewage treatment plant on the northwestern portion of the property. The remainder of the property appeared unchanged. Longdean Road was in the process of being extended further southeast and the surround land had been cleared and signs of buildings being constructed were present. The rest of the surrounding properties appeared unchanged.
- In the 1979 photograph the square pit to the east of the parcel had been filled in and covered over. The rectangular areas of earth materials were no longer present. Southeast of the DPW building, a building had been constructed where the current transfer station building is located. Residential type buildings had been constructed along the remainder of Longdean Road. The remainder of the property and surrounding properties appeared unchanged.
- In the 1985 photograph rows of brush piles were present on the parcel. A baseball field had been created on the property to the southwest of the landfill and a road had been created connecting the field with the landfill. The southern portion appeared to be covered over with the northern three quarters will in use. Piles of earthen materials appeared to be present in long rows to the west of the pond. The DPW building had been extended on the southeastern side with an addition. A baseball field had been constructed adjacent to the DPW building on the northeastern side. The main road through the property had been rerouted to where it currently remains. The land directly south of the DPW building was in the process of being excavated. The land to the northnortheast of the parcel was being used as an earthen materials storage lot. What is currently the bus parking lot had been cleared and was used as a car and bus lot. The remainder of the property and surrounding properties remained unchanged.
- In the 1990 photograph the brush had been removed or covered over and the parcel appeared to contain piles of earthen materials. The landfill to the west had been covered over and appeared to be out of use. An addition had been added to the DPW building. A long rectangular building had a smaller square building had been added to the sewage treatment plant complex. The remainder of the property and the surrounding properties appeared unchanged.
- In the 1991 and 1995 photographs the addition on the DPW building had been enlarged. The parcel, remainder of the property, and the surrounding properties appeared unchanged.
- In the 2005 through 2012 photographs the parcel remained unchanged. A building had been constructed southeast of the DPW building and the salt/sand storage building had been constructed. The Nike Command Center complex had been demolished and the animal control and police buildings, fire training school, and the wastewater process tanks and building had been constructed. The remainder of the property and the surrounding properties appeared unchanged.

4.0 SITE REGULATORY INFORMATION

4.1 Pertinent File Review/Research

Osprey reviewed municipal, state, and federal records for site permits, environmental violations, infractions, incidents, complaints and orders relating to the subject parcel. Osprey additionally performed a search of State and Federal databases for the parcel and surroundings through an EDR Radius Map Database Search (EDR), Phase I ESA ASTM radius database search. A copy of the

EDR data base search is provided in Appendix D. Additional sources of information reviewed for this assessment included:

- CT DEP Water Quality Classifications Map;
- CT DEP Water and Waste Management Bureau public files;
- CT DEP Spill incident reports; and
- Town of Fairfield offices; Fire Marshal, DPW Building Inspection Division and Engineering Division, Planning and Zoning Department, and Environmental Health Department

4.2 Results of Regulatory Review

The parcel was listed in UST, SWRCY, Spills, SEMS-Archive, LWDS, LUST, RCRA NonGen / NLR, RI Manifest, NJ Manifest, SHWS, SDADB, FUDS, SWF/LF, and CPCS databases. Review of documentation on file with the Fairfield Planning, Zoning, Inland Wetlands, Fire Marshall, Public Works, and Health Departments did not contain documentation related to environmental issues associated with the parcel.

5.0 AREA REGULATORY INFORMATION

5.1 Pertinent File Review/Research

Pertinent state and federal files, records, and lists mentioned in Section 4.1 of this report were reviewed for environmental infractions, incidents, complaints, and permits associated with the properties within the parcel vicinity. An EDR Radius Map Database Search data base report was prepared in accordance with Phase I ASTM radius standards. The EDR report is appended along with other pertinent records.

5.2 Results of Regulatory Review

According to the EDR database report, a number of listings are in the area of the parcel. The following table summarizes the EDR report findings for the more significant sites.

Site	Report	Approximate Distance From	
		Subject Site	
Betty Goodfellow	LUST, Spills, CPCS	0.367 miles N	
Don Warnitski	LUST, Spills, CPCS	0.375 miles N	
155 Alden St	LUST, CPCS	0.378 miles NNW	
Ms. Haffinger	LUST, CPCS	0.378 miles NNW	
Oldfield Senior Center	LUST, Spills	0.407 miles NW	
R. Murray Property	SDADB, LUST, Spills,	0.452 miles N	
	CPCS		
Old Dam Recreational	LUST, Spills	0.486 miles SSW	
South Pine Creek	SHWS, SDADB, CPCS	0.791 miles WSW	
Road			

The EDR report information is appended. Additional state and EPA information reviewed for properties in the immediate vicinity of the parcel are discussed below.

5.3 Underground Storage Tanks/Oil and Chemical Spill Incidents

The EDR database report identified 8 leaking underground storage tank (LUST) facilities within a

0.5 mile radius of the parcel. Documented/reported spills or releases of chemicals and/or petroleum products have occurred within a 1/2-mile radius of the parcel but a review of the search data does not indicate a high probability of area releases impacting the parcel.

6.0 CONCLUSIONS AND RECOMMENDATIONS

The Public Works Aggregate Yard parcel is a 5.54 acre parcel that contains stockpiles of fill material. At the time the research was conducted, the findings of the Phase I Environmental Site Assessment were as follows:

- At the time the research was conducted, the findings of the Phase I Environmental Site Assessment were as follows:
- The parcel was supplied with a public utility electricity connection.
- There was no evidence of existing underground or aboveground fuel storage tanks on the subject parcel.
- No significant staining of the ground or other visible signs of contamination were present during the time of the inspection. Floor drains were not present in the trailer.
- Surface runoff from the outside waste sorting areas on the southerly portion of the parcel drained to a water quality treatment pond. Overflow from this pond was directed to the sanitary sewer.
- Documentation reviewed did not indicate that hazardous wastes had been generated on-site. The site did not appear to meet the definition of an "Establishment" under the Transfer Act as activities listed in the qualifying criteria were present. No outstanding orders or notice of violations pertaining to the subject parcel were identified during a review of municipal, state, or federal records.
- The parcel was located in a municipal public works area surrounded by a larger residential area. No documentation reviewed under the scope of the Phase I ESA indicated that any surrounding area properties had potentially impacted the environmental quality of the parcel.
- Asbestos containing building materials were not a concern as no permanent buildings were present on the parcel.
- The subject parcel had MSW, possibly as deep as 20', buried in an excavation and then covered with soil, concrete, and asphalt that was intended to be recycled. This base was added to over the years with soil, concrete, and asphalt from DPW projects over the ensuing years. The existing stockpile was gradually being reduced as it was mixed with clean fill for off-site reuse.

Significant data gaps were present in the research of this parcel under the industry standard scope for a Phase I site assessment and included:

- Information regarding the composition and depth of the base municipal solid waste layer was not available other than the general type and estimated depth.
- Information regarding the composition and depth of the layer of fill material above the MSW was not available other than it was referenced as being DPW project fill.

8.0 LIMITATIONS

This report was completed by Osprey Environmental Engineering, LLC. (Osprey) for the sole use of the client listed on the cover of this report, and their lenders, attorneys, and clients in connection with an assessment of on-site environmental conditions. Use of the report by any other person for any other purpose is not authorized except with the prior written consent of Osprey.

The work was undertaken to assess environmental conditions specifically on the subject parcel in accordance with generally accepted engineering and hydrogeologic practices. No other warranty, express or implied, is made. Absolute assurance that any and all possible contamination at the site was identified cannot be provided. The report conclusions are based, in part, on information provided by the client, their agents, or third parties, including State or local officials. Osprey assumes no responsibility for the accuracy and completeness of this information. Where visual observations are included in the report, they represent conditions at the time of the inspection, and may not be indicative of past or future site conditions.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 03/07/2016 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
FAIRFIELD MUNICIPAL	ONE ROD ROAD	NE 1/8 - 1/4 (0.199 mi.)	3	11

State- and tribal - equivalent CERCLIS

CT SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Protection's Inventory of Hazardous Disposal Sites.

A review of the CT SHWS list, as provided by EDR, and dated 04/23/2010 has revealed that there are 2 CT SHWS sites within approximately 1 mile of the target property.

CT SWRCY: List of Department of Environmental Protection's Recycling Facilities

A review of the CT SWRCY list, as provided by EDR, and dated 12/11/2015 has revealed that there is 1 CT SWRCY site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
TOWN OF FAIRFIELD SO	533 ONE ROD HWY	NE 1/8 - 1/4 (0.162 mi.)	2	11

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/09/2015 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

FUDS: The Listing includes locations of Formerly Used Defense Sites Properties where the US Army Corps Of Engineers is actively working or will take necessary cleanup actions.

A review of the FUDS list, as provided by EDR, and dated 01/31/2015 has revealed that there is 1 FUDS site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
NIKE BR-65		SW 1/4 - 1/2 (0.427 mi.)	15	40

CT CPCS: A list of Contaminated or Potentially Contaminated Sites within Connecticut. This list represents the "Hazardous Waste Facilities," as defined in Section 22a-134f of the Connecticut General Statutes (CGS). The list contains the following types of sites: Sites listed on the Inventory of Hazardous Waste Disposal Sites; Sites subject to the Property Transfer Act; Sites at which underground storage tanks are known to have leaked; Sites at which hazardous waste subject to the RCRA; Sites that are included in EPA's (CERCLIS); Sites that are the subject of an order issued by the Commissioner of DEP that requires investigation and remediation of a potential or known source of pollution; and Sites that have entered into one of the Department's Voluntary Remediation Programs.

A review of the CT CPCS list, as provided by EDR, and dated 03/01/2016 has revealed that there are 7 CT CPCS sites within approximately 0.5 miles of the target property.

Description: Control site located on Old Rod Highway off of Reef Road. Abutted by

Old Rod Highway and the Town of Fairfield wastewater treatment facility to the north and wetlands to the east, west, and south. The control site consists of eight buildings. Administration, recreation, and storage buildings No. 1 and 2, enlisted men barracks and officers quarters buildings No. 1 and 2, combined mess hall, motor repair shop, storehouse, spare parts, and battery charger building, and a lube oil shed. All buildings at control site in satisfactory condition and utilized by the town of Fairfield, CT. Launch site located on Old Dam Road off of South Pine Creek Road. Consisted of three missile silos, an enlisted men and officer quarters barracks, a missile assembly and test building, a generator building, and a acid fueling station and acid shed. The generator building, acid fueling station, and storage shed were removed by the town and a baseball field was constructed at this location. The missile storage silos abut wetlands and a former town landfill to the north and recently constructed athletic fields to

the east, west and south.

History: Control site 22.14 acres. Acquired by lease 4/1/1955. Lease

terminated in 1965. Launch site 15.82 acres fee and 22.26 acres easement. Acquired by purchase and condemnation in 1955. Reported

excess to GSA in 1964. 15.82 acre parcel deed to the town of

Fairfield, CT. 22.26 acres easement assumed disposed to the owners. Control and launch areas currently owned by the town of Fairfield, CT.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

SEH: List of Significant Environmental Hazards Report to DEEP

The Significant Environmental Hazard Statute is intended to identify and abate short-term risks associated with specific environmental conditions identified in the statute. After abatement of short-term risks (meaning abatement of the significant environmental hazard condition), there may still be potential long-term risks associated with the release. However, a significant environmental hazard can be considered abated under the statute even though potential long-term risks may not have been addressed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

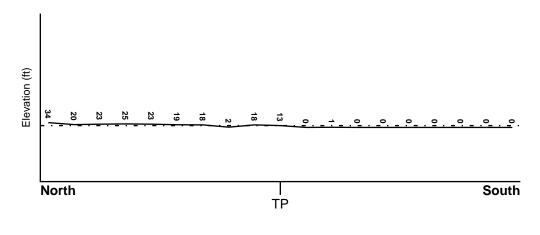

TOPOGRAPHIC INFORMATION

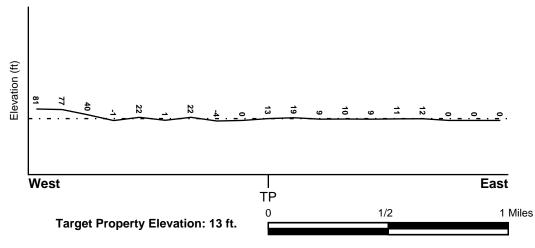

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles
Location Relative to TP: 1 - 2 Miles North

Site Name: HEIM

Site EPA ID Number: CTD001162122
Groundwater Flow Direction: EITHER NE OR SW.

Inferred Depth to Water: 5 to 7 feet.

Hydraulic Connection: Detailed hydraulic connection information is not available. The depth

to bedrock is estimated to range from 5 to 15 feet. Ground water at

the site is classified as GB by the Connecticut DEP.

Sole Source Aquifer:

No information about a sole source aquifer is available

Data Quality:

Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

 LOCATION
 GENERAL DIRECTION

 MAP ID
 FROM TP
 GROUNDWATER FLOW

Not Reported

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Living Area	1.270 pCi/L	89%	10%	0%
Basement	2.630 pCi/L	69%	29%	2%

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Tidal Wetlands

Telephone: 860-424-4054

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Connecticut Leachate and Wastewater Discharge Sites

Source: Department of Environmental Protection

The Leachate and Waste Water Discharge Inventory Data Layer (LWDS) includes point locations digitized from Leachate and Wastewater Discharge Source maps compiled by the Connecticut DEP. These maps locate surface and groundwater discharges that (1) have received a waste water discharge permit from the state or (2) are historic and now defunct waste sites or (3) are locations of accidental spills, leaks, or discharges of a variety of liquid or solid wastes.

EPA-Approved Sole Source Aquifers in Connecticut

Source: EPA

Sole source aquifers are defined as an aquifer designated as the sole or principal source of drinking water for a given aquifer service area; that is, an aquifer which is needed to supply 50% or more of the drinking water for the area and for which there are no reasonable alternative sources should the aquifer become contaminated.

Community and Non-Community Water System Wells

Source: Department of Public Health, Water Supplies Section

Telephone: 860-509-7333

Active, emergency and inactive wells used for potable purposes that are owned and operated by active community and non-community water systems in Connecticut.

RADON

State Database: CT Radon

Source: Department of Public Health

Telephone: 860-509-7367 Radon Statistical Summary

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency

(USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at

private sources such as universities and research institutions.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

EPA Radon Zones Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor

radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared

in 1975 by the United State Geological Survey
