

SUMMARY OF RECLAMATION YARD INSPECTION

Week No.: 5

Inspection Date: October 28, 2016

Logical Environmental Solutions, LLC (LES) visited the Reclamation Yard operated by Julian Enterprises located at the end of Richard White Way in Fairfield for the fifth weekly inspection on October 28, 2016. Julian was continuing the removal of soil from the southern side of the pile and the overall height of the pile was slightly reduced since the previous week's inspection. Julian was screening new material that was recently dumped at the base of the main pile (see attached photographs). There was also a large puddle at the base of the eastern side of the pile due to recent rain. It appeared as if Julian moved several small truckloads of drier soil from the northeastern side of the pile to fill in the wet area to make the site more accessible. The drier soil was taken from areas represented by soil samples S-1 and S-5 that were collected on September 29 and October 14, 2016. There was not a significant amount of change to the site from the previous week's inspection as Julian's large dozer was apparently out of commission and was being loaded for repairs offsite.

Soil samples were not collected during this inspection but additional soil samples will be collected throughout the duration of Julian's occupation of the site until December 15, 2016. Please let me know if you should have any questions.

Screening new material along southern edge of main pile. Photograph taken from southern side of main pile facing northwest.

Eastern side of main pile, looking down from top of the pile, facing east. Soil has been re-worked/moved to assist in filling in/drying out large puddles due to rain. The brown soil consists of material represented by the S-5 sample collected October 14, 2016 and the gray soil consists of material represented by the S-1 sample collected September 29, 2016.
