

June 20, 2011

Donald Moore
President, Common Council
City of Hudson
520 Warren Street
Hudson NY 12534

Dear Mr. Moore:

Please find enclosed petitions signed over a period of time by hundreds of people who live and work on, or near the route currently traveled by O&G Industries gravel trucks from Beecraft Mountain, located in the town of Greenport, through the City of Hudson to the Hudson River. With this submission, we wish to bring both the significant health and safety risks created by the current route to your attention, in addition to the impacted community's desire for relief.

We heard the stories as we went door to door collecting signatures: historic buildings that shake as dump trucks fly by; baby carriages crossing paths with 16-wheelers. The large trucks bring excessive noise and vibration and continuous exposure to airborne toxins (including deadly diesel soot), all of which add to public safety concerns.

The impact is acutely felt on the city's north side, in a community of Columbia County's most densely populated homes where low to moderate income people, including a large number of children, the elderly and the handicapped, are housed. These are people with limited resources, with little or no opportunity to escape.

In addition to petitions addressed to O&G Industries, Mayor Richard Scalera, and then Common Council President John Cody, some of the petitions enclosed are addressed to the Greenport Planning Commission, in support of O&G's application to create an alternate truck route via the causeway through the South Bay. These petitions were circulated by the Bottom Line.

Our deeply affected consortium of Hudson residents hopes the department will encourage the creation of an alternative route to facilitate the removal of heavy truck traffic from our fragile and over-stressed neighborhoods.

We invite you and members of your staff to visit our community and experience the intense truck traffic firsthand.

Sincerely,

The Bottom Line
Linda Mussmann, Claudia Bruce, Lynn Sloneker

enclosures: Petitions with a total of 508 signatures

"These trucks are plowing through our residential streets, twisting around sharp curves and dodging parked cars, pedestrians, dogs and kids on bikes." Hudson resident

The current volume of truck traffic routed through the city of Hudson is unprecedented. Dump trucks hauling heavy crushed stone currently make hundreds of roundtrips each week via Green, Columbia and Front streets.

The truck traffic is a threat to the general safety and welfare, as well as the structural integrity of the City of Hudson.

This extraordinary traffic has numerous adverse impacts on residents and business community, alike, most notably:

Excessive noise and vibration

The noise level in a residential neighborhood, near a preschool facility on upper Columbia Street consistently measured 115 dB, the equivalent amount of noise generated by a subway train, a rock concert or a jet engine.

Continuous exposure to airborne toxins, including diesel soot

The fine particulate matter in diesel exhaust can bypass the body's natural defenses and penetrate deep into the lungs, to cause or exacerbate respiratory and cardiovascular illnesses. The lifetime cancer risk from diesel soot is high.

Public safety concerns

The current route sends trucks through 24 intersections. Under the alternative plan, trucks will traverse only two (2) intersections, away from children playing, and pedestrians – tourists and residents alike – walking on city sidewalks.

These trucks should not be allowed access to the most populated portion of Columbia County. They do not belong on a route through neighborhoods containing the city's most densely populated homes. Homes where low to moderate income people – including a large number of children, the elderly and the handicapped – are housed. People with limited resources, who have little or no opportunity to escape the noise and fumes, and who already shoulder the burden of an unfair amount of environmental pollution.

Therefore, we the undersigned RESIDENTS OF HUDSON, do hereby respectfully request the Greenport Town Planning Board give Hudson a break. We ask that the members of the board approve the pending application of O&G Industries to create an alternative truck route from Greenport to Hudson that will remove the trucks from our neighborhoods.

"These trucks are plowing through our residential streets, twisting around sharp curves and dodging parked cars, pedestrians, dogs and kids on bikes." Hudson resident

The current volume of truck traffic routed through the city of Hudson is unprecedented. Dump trucks hauling heavy crushed stone currently make hundreds of roundtrips each week via Green, Columbia and Front streets.

The truck traffic is a threat to the general safety and welfare, as well as the structural integrity of the City of Hudson.

This extraordinary traffic has numerous adverse impacts on residents and business community, alike, most notably:

Excessive noise and vibration

The noise level in a residential neighborhood, near a preschool facility on upper Columbia Street consistently measured 115 dB, the equivalent amount of noise generated by a subway train, a rock concert or a jet engine.

Continuous exposure to airborne toxins, including diesel soot

The fine particulate matter in diesel exhaust can bypass the body's natural defenses and penetrates deep into the lungs, to cause or exacerbate respiratory and cardiovascular illnesses. The lifetime cancer risk from diesel soot is high.

Public safety concerns

The current route sends trucks through 24 intersections. Under the alternative plan, trucks will traverse only two (2) intersections, away from children playing, and pedestrians – tourists and residents alike – walking on city sidewalks.

These trucks should not be allowed access to the most populated portion of Columbia County. They do not belong on a route through neighborhoods containing the city's most densely populated homes. Homes where low to moderate income people – including a large number of children, the elderly and the handicapped – are housed. People with limited resources, who have little or no opportunity to escape the noise and fumes, and who already shoulder the burden of an unfair amount of environmental pollution.

Therefore, we the undersigned RESIDENTS OF HUDSON, do hereby respectfully request the Greenport Town Planning Board give Hudson a break. We ask that the members of the board approve the pending application of O&G Industries to create an alternative truck route from Greenport to Hudson that will remove the trucks from our neighborhoods.

These trucks should not be allowed access to the most populated portion of Columbia County. They do not belong on a route through neighborhoods containing the city's most densely populated homes. Homes where low to moderate income people – including a large number of children, the elderly and the handicapped – are housed. People with limited resources, who have little or no opportunity to escape the noise and fumes, and who already shoulder the burden of an unfair amount of environmental pollution.

Therefore, we the undersigned RESIDENTS OF HUDSON, do hereby respectfully request the Greenport Town Planning Board give Hudson a break. We ask that the members of the board approve the pending application of O&G Industries to create an alternative truck route from Greenport to Hudson that will remove the trucks from our neighborhoods.

"These trucks are plowing through our residential streets, twisting around sharp curves and dodging parked cars, pedestrians, dogs and kids on bikes." Hudson resident

The current volume of truck traffic routed through the city of Hudson is unprecedented. Dump trucks hauling heavy crushed stone currently make hundreds of roundtrips each week via Green, Columbia and Front streets.

The truck traffic is a threat to the general safety and welfare, as well as the structural integrity of the City of Hudson.

This extraordinary traffic has numerous adverse impacts on residents and business community, alike, most notably:

Excessive noise and vibration

The noise level in a residential neighborhood, near a preschool facility on upper Columbia Street consistently measured 115 dB, the equivalent amount of noise generated by a subway train, a rock concert or a jet engine.

Continuous exposure to airborne toxins, including diesel soot

The fine particulate matter in diesel exhaust can bypass the body's natural defenses and penetrate deep into the lungs, to cause or exacerbate respiratory and cardiovascular illnesses. The lifetime cancer risk from diesel soot is high.

Public safety concerns

The current route sends trucks through 24 intersections. Under the alternative plan, trucks will traverse only two (2) intersections, away from children playing, and pedestrians – tourists and residents alike – walking on city sidewalks.

These trucks should not be allowed access to the most populated portion of Columbia County. They do not belong on a route through neighborhoods containing the city's most densely populated homes. Homes where low to moderate income people – including a large number of children, the elderly and the handicapped – are housed. People with limited resources, who have little or no opportunity to escape the noise and fumes, and who already shoulder the burden of an unfair amount of environmental pollution.

The noise level in a residential neighborhood, near a preschool facility on upper Columbia Street consistently measured 115 dB, the equivalent amount of noise generated by a subway train, a rock concert or a jet engine.

Continuous exposure to airborne toxins, including diesel soot

The fine particulate matter in diesel exhaust can bypass the body's natural defenses and penetrate deep into the lungs, to cause or exacerbate respiratory and cardiovascular illnesses. The lifetime cancer risk from diesel soot is high.

Public safety concerns

The current route sends trucks through 24 intersections. Under the alternative plan, trucks will traverse only two (2) intersections, away from children playing, and pedestrians – tourists and residents alike – walking on city sidewalks.

These trucks should not be allowed access to the most populated portion of Columbia County. They do not belong on a route through neighborhoods containing the city's most densely populated homes. Homes where low to moderate income people – including a large number of children, the elderly and the handicapped – are housed. People with limited resources, who have little or no opportunity to escape the noise and fumes, and who already shoulder the burden of an unfair amount of environmental pollution.

Therefore, we the undersigned **RESIDENTS OF HUDSON**, do hereby respectfully request the Greenport Town Planning Board give Hudson a break. We ask that the members of the board approve the pending application of O&G Industries to create an alternative truck route from Greenport to Hudson that will remove the trucks from our neighborhoods.

"These trucks are plowing through our residential streets, twisting around sharp curves and dodging parked cars, pedestrians, dogs and kids on bikes." Hudson resident

The current volume of truck traffic routed through the city of Hudson is unprecedented. Dump trucks hauling heavy crushed stone currently make hundreds of roundtrips each week via Green, Columbia and Front streets.

The truck traffic is a threat to the general safety and welfare, as well as the structural integrity of the City of Hudson.

This extraordinary traffic has numerous adverse impacts on residents and business community, alike, most notably:

Excessive noise and vibration

The noise level in a residential neighborhood, near a preschool facility on upper Columbia Street consistently measured 115 dB, the equivalent amount of noise generated by a subway train, a rock concert or a jet engine.

Continuous exposure to airborne toxins, including diesel soot

The fine particulate matter in diesel exhaust can bypass the body's natural defenses and penetrate deep into the lungs, to cause or exacerbate respiratory and cardiovascular illnesses. The lifetime cancer risk from diesel soot is high.

Public safety concerns

The current route sends trucks through 24 intersections. Under the alternative plan, trucks will traverse only two (2) intersections, away from children playing, and pedestrians – tourists and residents alike – walking on city sidewalks.

These trucks should not be allowed access to the most populated portion of Columbia County. They do not belong on a route through neighborhoods containing the city's most densely populated homes. Homes where low to moderate income people – including a large number of children, the elderly and the handicapped – are housed. People with limited resources, who have little or no opportunity to escape the noise and fumes, and who already shoulder the burden of an unfair amount of environmental pollution.

Therefore, we the undersigned **RESIDENTS OF HUDSON**, do hereby respectfully request the Greenport Town Planning Board give Hudson a break. We ask that the members of the board approve the pending application of O&G Industries to create an alternative truck route from Greenport to Hudson that will remove the trucks from our neighborhoods.

The current volume of truck traffic routed through the city of Hudson is unprecedented. O & G dump trucks, hauling heavy crushed stone, currently make 300 roundtrips each week via Green, Columbia and Front streets. By early 2009, that number will increase to 400 roundtrips per week.

This extraordinary traffic has numerous adverse impacts on Hudson's residents and business community, including:

- Excessive noise and vibration
- Toxic fumes and pollution
- City infrastructure damage
- Public safety
- Community character
- Diminished property values

These trucks should not be allowed access to the most populated portion of Columbia County. They do not belong on a route through neighborhoods containing the city's most densely populated homes. Homes where low to moderate income people — including a large number of children, the elderly and the handicapped — are housed. People with limited resources, who have little or no opportunity to escape the noise and fumes, and who already shoulder the burden of an unfair amount of environmental pollution.

The O & G truck traffic is a threat to our general safety and welfare, as well as the structural integrity of our city.

Therefore, we, the undersigned, do hereby request that all O & G truck traffic be removed from the city of Hudson immediately, and that an alternative route be created, away from our homes, schools and businesses.

Sincerely,
[NAME & ADDRESS]
