

Studying Tips for Middle School Students

Your child has a better chance of succeeding in college if he/she masters school survival skills now. Here's how you can help him/her get organized and learn to study effectively. While many teachers spend some class time teaching study skills, students often need more guidance than they get in the classroom. In middle school, there's more homework, it becomes more difficult and it requires analytical skills your child may not have developed yet.

Getting organized is crucial for your child, says Linda Winburn, a veteran South Carolina middle school teacher who became the state's 2005 Teacher of the Year. "And the key is parent involvement." Here are some tips to help your child get organized:

TIP # 1: PROVIDE A PLACE TO STUDY.

It doesn't have to be a desk, says Winburn. "A kitchen counter is a great place, especially if mom's in the kitchen cooking." The desk or table surface should be big enough so that your student can spread out papers and books. Make sure essential supplies such as pens, paper and calculator are close by. Have good lighting and a sturdy chair that's the right height available.

TIP # 2: HELP YOUR CHILD DEVELOP A SYSTEM TO KEEP TRACK OF IMPORTANT PAPERS.

If your child tends to forget to turn in homework or can't quite keep track of how he's doing in a class, it might help to get him/her a binder with a folder in the front for completed work ready to be turned in and a folder in the back for papers returned by the teacher. "For me, staying organized meant creating a system — any system — and sticking to it," says Gabriela Kipnis, now a student at the University of Pennsylvania. "I had fun color-coding, organizing and using dividers, but the truth is, all that mattered was that there was a method that I stuck with."

Studying Tips for Middle School Students

TIP # 3: MAKE SURE YOUR CHILD HAS — AND USES — A PLANNER TO KEEP TRACK OF ASSIGNMENTS.

Help your child get in the habit of writing down each daily assignment in each subject and checking it off when it's complete. Some schools provide these to students, and if not, you might want to work with your PTA or parent organization to provide planners at your school.

TIP # 4: ENCOURAGE YOUR CHILD TO ESTIMATE HOW LONG EACH ASSIGNMENT WILL TAKE.

Your child can then plan a realistic schedule, building in study breaks after subjects that are most challenging, and allowing for soccer games and band practice. Helping your child keep track of time spent studying — rather than staring at a blank page — will help him/her think about how he's/she's using his/her time. If he's/she's spending too much time on a subject that might be a signal that he/she needs extra help or tutoring.

TIP # 5: HELP YOUR CHILD BREAK BIG PROJECTS INTO SMALLER ONES.

A big research project will seem less overwhelming and will be less likely to be left until the last minute if it's done in manageable chunks, each with its own deadline.

TIP # 6: PEOPLE ARE PRODUCTIVE AT DIFFERENT TIMES OF DAY.

Some people focus better in the morning, others at night. Help your child find the times that his/her efforts will be most effective.

TIP # 7: COMMUNICATE WITH YOUR CHILD’S TEACHERS.

If your child is struggling with organizational skills, talk to the school counselor or teachers about what might be causing the problems and brainstorm approaches to solve them.

“Did You Do Your Homework?”

Parents need to ask more questions than this one, teachers advise. How much should you help with homework? Monitor homework but remember it’s your child’s homework, not yours. You can help by asking questions that help guide your child to his own solutions. Some examples:

- ⇒ What information do you need to do this assignment?
- ⇒ Where are you going to look for it?
- ⇒ Where do you think you should begin?
- ⇒ What do you need to do next?
- ⇒ Can you describe how you’re going to solve this problem?
- ⇒ How did you solve this problem?
- ⇒ What did you try that didn’t work?
- ⇒ Why does this answer seem right to you?
- ⇒ Tell me more about this part?

TIP # 8: REREADING ISN'T THE SAME AS LEARNING.

“Reviewing alone is not enough, says Kipnis, the UPenn student, reflecting on what she has learned along the way. “Thinking of potential essay questions and outlining them or working out the challenging math problems helps me learn how to apply the material so that I do not blank when I see the questions on the test.”

“For math and sciences, a big problem that I had was that I would spend a lot of time reviewing the concepts, but I wouldn’t learn them because I was not practicing applying the concepts,” she says. “I was the most productive when I created sheets with tons of practice problems and just practiced applying the concept in many different ways.”

There are other ways your student can practice this kind of active learning – highlighting notes, using Post-its to mark key textbook passages, making study cards, and mapping and diagramming concepts.

Studying Tips for Middle School Students

TIP # 9: SOMETIMES WE JUST HAVE TO MEMORIZE.

You may have used a mnemonic like Roy G. Biv to remember the colors of the rainbow (red, orange, yellow, green, blue, indigo, violet) or My Very Educated Mother Just Sent Us Nine Pizzas to remember the correct order of the planets, back when Pluto was still considered the ninth one. Inventing your own silly mnemonic together works just as well and can lighten up a study session.

TIP # 10: HELP YOUR CHILD MAKE THE MOST OF HIS/HER TIME.

If he/she carries a review sheet or book along with him/her, sitting in the doctor's waiting room or waiting out a traffic jam can be productive study time. That leaves more time for a basketball game after school.

TIP # 11: MAKE SURE YOUR CHILD KNOWS THE BASICS.

Find out the skills students at your child's grade level are expected to have. Middle school students are generally expected to have learned basic multiplication and division facts, for example. If your child can't quickly recall them, it is likely to hurt his/her scores on math tests.

TIP # 12: LOOK FOR OTHER SOURCES OF SUPPORT.

Find out the best way to reach your child's teachers and keep that contact information handy all year. Is there a college student in your neighborhood who can help with math, a relative who can tutor him in Spanish? Talk to your child about finding a "study buddy" or group. Study groups can be effective because students can fill in the gaps in each other's knowledge and test their understanding of the material by explaining it to others.

Studying Tips for Middle School Students

TIP # 13: REFLECT ON WHAT WORKS.

Some questions you can ask your child: How do you know when you've studied enough? How did you keep yourself focused? How much time did you plan to spend and how much did you actually spend? How would you do this differently next time?

TIP # 14: HELP YOUR CHILD DESTRESS.

Good study skills can help reduce anxiety, and so can relaxation exercises and regular physical activity. If your child seems unusually anxious about tests, talk to him/her about it. If the work seems too difficult for your child or the workload too great, contact the school.
