Violations:

Site ID: 13616
Site Name: Brittan Ave Shell #171
Violation Date: 12-17-2018
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173

Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.

Violation Notes: Returned to compliance on 12/17/2018. One 55-gallon drum used for accumulating the waste fuel/water mixture was open. The site manager closed this drum during the inspection and the minor violation was corrected.

Violation Division: San Mateo County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 13616
Site Name: Brittan Ave Shell #171
Violation Date: 01-12-2021
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)

Violation Description: Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.

Violation Notes: Returned to compliance on 01/22/2021. Several new employees were hired recently and documentation of hazardous materials safety and emergency procedures is not available for four new employees. Provide a record of this training for all new employees within 30 days and ensure new hire and annual training records are on-site or readily available.

Violation Division: San Mateo County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Site ID: 13616
Site Name: Brittan Ave Shell #171
Violation Date: 01-12-2021
Citation: HSC 6.7 25284.2 - California Health and Safety Code, Chapter 6.7, Section(s) 25284.2

Violation Description: "Failure to meet one or more of the following requirements: Install or maintain a liquid-tight spill container. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill container. Be resistant to galvanic corrosion. Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container. Tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Tested by a certified UST service technician. Maintain records of spill containment testing for 36 months. "

Violation Notes: Returned to compliance on 01/12/2021. The 91 UST overspill container did not pas a hydrostatic test due to a loose fitting. The fitting was tightened and the spill bucket was retested with a passing result correcting this violation.

Completed Info:

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 09/07/1983
Comments: Fifty-five gallon drums and 13 above-ground storage tanks were decontaminated, inspected, and removed from the facility as part of closure activities. GTE Lenkurt submitted a Closure Report dated September 7, 1983.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 11/01/2006
Comments: Site screening found that residual VOCs in groundwater and soil vapor on western half of property presented acceptable risk from potential groundwater extraction and soil vapor intrusion exposure pathways. No data was available for eastern half of property. Preliminary Endangerment Assessment recommended for site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Certification
Completed Date: 11/01/1983
Comments: Certified closure of the Site.

Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: Extracted from Toxichem's June 8, 2007 Sub-Slab Vapor Extraction Feasibility Testing Report, San Mateo County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report. The northern portion of the subject property, with a former address of 895 Brittan Avenue, was occupied by the South County Fire Department as a fire station from the early 1950's until the mid-1990's. In March 1993, Applied Science and Engineering (ASE) conducted a soil sampling investigation at the fire station property. The soil investigation was intended to determine the extent of soil impact at the location of a former diesel UST at the fire station that had been excavated in September 1992. Eight soil borings were hand augered to depths of two to seven feet below ground surface (bgs). One soil sample was collected from each boring at a depth of 3.5 to 4 feet bgs, just above the reported depth to groundwater. One boring, identified as B-3, encountered refusal at a depth of approximately

S103964371

two feet bgs. While soil samples were not collected at B-3, strong petroleum odors were noted in the sandy material encountered. The refusal at B-3 was interpreted as possible evidence of an abandoned UST. Laboratory analytical results and field observations indicated the extent of soil contamination appeared to be limited to the area around B-3. The South County Fire Authority contracted to conduct additional excavation. On October 5, 1993, BAI re-excavated a pit where a former unleaded gasoline UST had been located, at the location of B-3. The excavation was extended to remove visibly impacted soil. Laboratory analyses of the soil samples collected from the excavation bottom and side walls, and the excavated soil stock pile indicated that TPHg, TEPHd and BTEX were not detected in any of these soil samples. No groundwater was encountered and the excavation was backfilled with drain rock and aggregate. The SMCohSA granted closure for the two USTs on April 30, 1996. The southern portion of the subject property was occupied by a fuel service station and tire repair facility from approximately 1970 to 1985, operated by White Front Stores with an address of 1113 Industrial Road, San Carlos. Reportedly, three 10,000-gallon gasoline USTs and fuel dispenser pumps were removed from the subject property in 1985 by Oil Heat Engineering without soil sampling or analyses. HK2/Semco, who removed the tanks and fuel dispensers, verbally reported that the tanks did not appear to have leaked, but that the soil beneath the fuel dispensers may have been impacted by fuel. The excavations were subsequently backfilled with gravel and the surface was repaved. To evaluate the extent of groundwater impact, EMG installed three groundwater monitoring wells (MW-1, MW-2, MW-3) on property adjacent to the subject property in January 1995. MW-1 and MW-2 were drilled to twenty feet bgs and screened from fifteen to twenty feet bgs. MW-3 was drilled to eleven feet bgs and screened from six to eleven feet bgs. Groundwater was encountered at depths of approximately two to five feet bgs. EMG reported free product was not observed in any of the wells, but a strong gasoline odor was noted in MW-3. Soil and groundwater samples were collected from each boring. In February and March 1995, additional investigation activities were conducted. Levine-Fricke measured depths to groundwater in the three subject property groundwater monitoring wells and calculated a groundwater flow and gradient as easterly with a gradient of 0.01 feet per foot. In April 1998, a soil and groundwater investigation was completed on the southern portion of the subject property for The City of San Carlos, the property owner. The soil and groundwater investigation consisted of six borings (B1-B6) from which a total of eleven soil and five groundwater samples were collected. GEI/AES concluded: soil in the southwestern portion of the subject property was impacted with gasoline at detectable concentrations over 100 mg/kg to a depth of approximately 6.5 feet, except in and around the location of the three former USTs, where impacted soil appeared to extend to approximately ten feet; there was a moderate to high potential that gasoline releases from the former gasoline tanks and/or fuel dispensers impacted soils on the northern portion of the subject property, as well as soils south and west of the subject property; perched water in shallow fill soils on the southern portion of the subject property had been significantly impacted by petroleum hydrocarbons; and petroleum hydrocarbons may have impacted groundwater beyond subject property boundaries. In a letter dated May 20, 1998, SMCohSA informed the City of San Carlos that: (a) the subject property would be regulated as a LUST site, (b) the City of

San Carlos must determine the extent of soil and groundwater contamination, and (c) if soil remediation was included in redevelopment of the subject property, a work plan was required before soil remediation activities occurred. In June 1998, GEI completed a Soil & Groundwater Investigation and Human Health Risk Assessment for the City of San Carlos. The scope of work included seven soil borings (B-A through B-G), and the collection of thirteen soil samples, six grab groundwater samples and seven soil gas samples for chemical analyses. Four of the borings (B-A, B-B, B-F, B-G) were located on the subject property and three borings (B-C, B-D, B-E) were located on an adjacent property under an access agreement with the owner, the Dollar Company. A Human Health Risk Assessment (HHRA) was completed to calculate risks to construction workers and future commercial occupants. GEI/Toxichem concluded the following: soil remediation was not required on the subject property; the subject property should qualify as a low risk groundwater case; and groundwater monitoring would be necessary for at least one hydrologic cycle to determine plume stability and the effectiveness of passive bioremediation. GEI/Toxichem recommended the following: the construction of one onsite and two offsite groundwater monitoring wells screened in the confined water bearing zone; sampling of the three new wells and one existing offsite groundwater monitoring well on a quarterly basis for one year; an investigation to evaluate if utility lines on the east side of Industrial Road (adjacent and west of the subject property) were not preferential pathways for offsite migration of impacted perched water; an investigation to evaluate if water wells or other sensitive receptors are not likely to be impacted by groundwater migrating from the subject property; and a Health and Safety Plan to specify appropriate worker training and required health protection methods and procedures for subject property construction workers. In a letter dated October 26, 1998, SMCohSA requested Dollar Company, owner of the existing monitoring wells MW-1, MW-2 and MW-3, either properly destroy the wells or transfer ownership of the wells to the City of San Carlos. In a SMCohSA Official Inspection Report dated March 25, 1999, the SMCohSA stated MW-1 and MW-3 were destroyed by pressure grouting and that MW-2 was now the property of the City of San Carlos. In early April 1999, three hydraulic automobile lift cylinders and four fifty-gallon hydraulic oil reservoir USTs were discovered during site grading activities in the area of the former tire repair facility. The cylinders and USTs were initially excavated and removed by equipment operators without sampling. Subsequently, the two areas where the hydraulic lift cylinders and USTs were located were re-excavated, and soil samples identified as S-1 and S-2 were collected from the floors of the excavations at an approximate depth of five feet bgs. Perched groundwater with a visible sheen was noted in the eastern-most excavation and a grab groundwater sample (G-1) was collected. Excavated soil was temporarily placed back into the excavation. On April 8, 1999, an area fourteen feet by sixteen feet was excavated to a depth of eight feet bgs centered around the location of soil sample S-2. GEI collected four excavation soil confirmation samples (SW-1 from the south sidewall, SW-2 from the bottom of the excavation, SW-3 from the north sidewall and SW-4 from the east sidewall). A soil sample was not collected from the west sidewall due to no visible or olfactory indications of contamination. Groundwater did not collect in the excavation at a volume sufficient to permit sampling. On April 9, 1999, GEI collected four grab samples from the soil stockpile. On

April 13, 1999, surface water and groundwater that had entered the excavation was pumped into a 1,000 gallon portable tank. On April 14, 1999, groundwater had re-entered the excavation and GEI collected groundwater sample Excavation-1. Upon reviewing the analytical results, SMCoHSA verbally approved the backfilling of the excavation. On April 21, 1999, an equipment operator uncovered and excavated an additional 50 gallon hydraulic oil reservoir tank in the vicinity of the previously removed hydraulic oil tanks. On April 22, 1999, the equipment operator identified the area from which the tank had been excavated. GEI collected a soil sample (A-1) from the south sidewall of the excavation at approximately four feet bgs. On April 23, 1999, four soil samples were collected from the soil stockpile (samples Stockpile-6 through Stockpile-9). The over-excavation was initiated on April 28, 1999. During excavation, an active water line was severed and activities were halted. The water in the excavation was pumped out of the excavation and discharged into the sanitary sewer under a POTW permit. On April 29, 1999 the excavation was expanded to nine feet by sixteen feet to a depth of six to seven feet, and the excavated soil stockpiled. Soil samples were collected from three sidewalls and floor of the excavation. Sample MGWW was collected from the west sidewall, sample MGEW was collected from the east sidewall, sample MGSW was collected from the south side wall and sample MGBS was collected from the bottom of the excavation. The north side wall had been previously excavated on April 21, 1999 during initial excavation activities. Four soil samples were collected from the soil stockpile and labeled MGSS-1, MGSS-2, MGSS-3 and MGSS-4. The stockpile samples were composited into sample MGSS-1,2,3,4. On April 30, 1999 a sample of groundwater which had entered the excavation was collected and labeled Excavation Water-2. SMCoHSA subsequently verbally approved backfilling of the excavation. On May 12, 1999, GEI coordinated the disposal of the stockpiled soil, totaling 101 cubic yards, to the BFI Vasco Road Sanitary Landfill. On May 27, 1999, during site construction activities approximately eighty-one cubic yards of soil were excavated from the southern edge of the subject property and stockpiled because of a petroleum odor. The soil stockpile was sampled and the samples labeled J-1, J-2, J-3 and J-4. On June 4, 1999, the soil stockpile was transported to and disposed at the BFI Vasco Road Sanitary Landfill in Livermore, California. On June 8, 1999, thirty-five cubic yards of soil were excavated during foundation excavation activities in the central portion of the subject property and stockpiled. The soil stockpile was sampled and the soil samples were labeled K-1, K-2, K-3 and K-4. The 35 cubic yards of soil represented by sample K-(1,2,3,4) were reused onsite. In a letter dated September 29, 1999, GEI informed the SMCoHSA that additional soil samples were collected on the subject property to verify that elevated benzene concentrations in soil were limited in extent. GEI attempted to collect soil samples at two locations within the new building under construction at the site. The two locations were identified as F-1 and F-2, located approximately five feet and ten feet, respectively, southwest of the former hydraulic tank excavation sidewall sample (MGWW). Access holes were cut at both locations through the concrete floor. At location F-1, it was not possible to manually advance a soil auger past the large diameter aggregate base rock.. At location F-2, it was possible to collect a soil sample at 4.5 feet below the floor surface, which was dry and had a petroleum odor. At 6.5 feet below the floor surface at F-2, another soil sample was collected which was wet and also had a

S103964371

petroleum odor. Toxichem concluded in an updated HHRA that the additional data did not substantially alter their original conclusion that the risks to future commercial occupants were negligible and within acceptable levels. Redevelopment activities were completed on the subject property and the new commercial retail building occupied in October 1999 by Office Depot. In February 2000, three new groundwater monitoring wells (MW-4, MW-5 and MW-6) were installed on and off the subject property. Monitoring Well MW-4 was installed on the subject property, just southeast of the Office Depot Building. Monitoring Well MW-5 was installed off the subject property southwest of the Office Depot Building. Monitoring Well MW-6 was installed off the subject property, northeast of the Office Depot Building. The wells were placed in downgradient locations from former source areas. Each well casing was constructed to a total depth of 25 feet, with ten feet of screen with 0.020-inch machine slots placed between 15 and 25 feet bgs. The three new groundwater monitoring wells were developed and initially sampled with Monitoring Well MW-2 in February 2000. The groundwater flow direction, calculated from water levels in MW-4, MW-5 and MW-6 was in an easterly direction. GEI recommended the following: MW-2 not be included in subsequent monitoring events due to the absence of analytes being detected in MW-2 ; monitoring Wells MW-4, MW-5 and MW-6 be sampled on a quarterly basis for the next three quarters to cover a complete hydrologic cycle; and utility trenches adjacent to the west edge of the subject property be investigated to determine if the trenches were providing a preferential pathway for petroleum hydrocarbon migration from the site. On March 16, 2001, GEI manually augered three borings to first encountered groundwater at three locations along buried utility conduits adjacent to the northwest and southwest boundaries of the subject property. Boring B-1 was located outside of and just southwest of the subject property boundary, in a sidewalk that parallels the east side of Industrial Road. Boring B-2 was located outside of and just southwest of the subject property boundary, on Industrial Road to the southeast of the intersection of Industrial Road and Brittan Avenue. Boring B-3 was located on the northwest side of the subject property building, near Brittan Avenue. Grab groundwater samples were collected at each boring location at depths ranging from 4.5 to 12.7 feet bgs. GEI concluded the utility conduit trenches were not significant pollutant migration pathways. Groundwater monitoring wells MW-4, MW-5 and MW-6 were sampled on a quarterly basis from February 2000 through November 2001. Historic site groundwater level measurements have shown that the subject property groundwater flow varied significantly in direction. While the groundwater flow was generally easterly (east to southeast), it was also calculated at times to be to the northeast and northwest. On January 6, 2005, San Mateo County Groundwater Protection Program (SMCoGPP) issued a letter to the City of San Carlos requesting that the City of San Carlos prepare a written case closure argument justifying in detail that the subject property conditions meet the SMCoGPPs requirements for closure.

Registry ID: 110002955525

Click Here:

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Other Groundwater (uses other than drinking water), Soil
Diesel
The information below is from the 10/26/14 report prepared by Responsible Party's consultant. The San Mateo County Local Oversight Agency makes no representation as to the accuracy of the information. The Holly 76 gas station was previously operated as an ARCO/BP station. ARCADIS, consultant for ARCO/BP, is continuing an ongoing soil and groundwater investigation/monitoring of the site. On November 4, 2013, ARCADIS collected a sample of non-aqueous phase liquid (NAPL) from monitoring well MW-4. The laboratory reported the NAPL to be diesel fuel. The previous ARCO/BP station did not sell diesel fuel. Bay Petroleum, current owner of the station, began selling diesel fuel at the site in late 2010. On January 24, 2014 the station was notified by the San Mateo County, Groundwater Protection Program (GPP) that MW -4, located near dispenser 5/6, contained diesel fuel. The station voluntarily shut down the diesel fuel pumps at the site. On January 30, 2014, the system piping was tested and appeared to be functioning as designed, without leaks and was found to be in compliance by the San Mateo County representative. Based on this information, the San Mateo County GPP named Bay Petroleum as the responsible party to investigate the diesel fuel found in monitoring well MW -4. On March 4, 2014, Bay Petroleum met with Mr. Deno Milano of the County GPP to discuss the current site conditions. As a result of that meeting, GPP staff approved the removal of diesel fuel from the well and required periodic gauging of the well. Diesel fuel was to be measured and removed by Bay Petroleum during the months of April 2014, August 2014 and October 2014. ARCADIS was to gauge the fuel in the well during the months of June and December 2014. A report on the field activity is to be uploaded to the State GeoTracker database by December 31, 2014. During a site inspection, the GPP staff observed a crack in the concrete near the dispenser and monitoring well MW-4. According to GPP Staff, this crack could allow fuel from dispenser overfills to migrate to the soil and groundwater beneath the slab. Based on this the GPP requested a work plan to investigate the extent of diesel contamination in the soil and groundwater around monitoring well MW-4. On March 12, 2014, CCI met at the site with Mr. Vikram Singh of Bay Petroleum to evaluate the area around monitoring well MW-4. CCI observed some staining on the concrete around MW-4, which appeared to be petroleum related. There was a crack in the concrete a few feet southwest of the MW -4 well box. The crack appeared to be superficial and did not seem to extend all the way through the concrete. This was demonstrated by Mr. Singh who poured a little water on the crack. The water ponded but did not seep into crack. In addition, the flow of water on the concrete pad flowed toward monitoring well MW-4. This suggested that the diesel may have entered the well through the well box from an over-spill by a customer. On April 16, 2014, CCI went to the site to measure the amount of diesel fuel and remove the product from the well. Mr. Dino Milano from County GPP was present during the measuring of the well. Groundwater was measured at 4.20 feet below the top of the well casing. Total depth of the well was measured at 16.71 feet. Using an interphase probe, no free phase product was measured in the well. A stainless steel bailer was used to bring a sample of water to the surface and was placed in a clean 5-gallon bucket to observe for product sheen. No sheen was noted on the water surface. CCI returned to the site on August 13, 2014 to check monitoring well MW-4 for free

phase product a second time. Groundwater was measured at 4.75 feet below the top of the well casing. No free phase product was measured in the well.

Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: Extracted from Stantec's September 21, 2009 Quarterly Summary Report Fourth Quarter 2009, San Mateo County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report. The site is an active 76-branded gasoline retail outlet located at the western corner of Holly Street and Industrial Road in San Carlos, California. BP acquired the property from Mobil Oil Corporation (Mobil) in 1989. In 1994, BP transferred the property to TOSCO Marketing Company (TOSCO) and has not operated the facility since that time. The site is located in a mixed commercial and residential area. There is an active Holly Gas and Diesel-branded station located southeast of the site. A Shell-branded station was previously located east of the site. The former City of San Carlos pumping station property and Bills Mini-Storage are located northeast of the site. Surface structures at the site consist of a station building located in the west-central portion of the site and two dispenser islands, which are

covered by a canopy, in the east-central portion of the site. Two 10,000-gallon and one 12,000-gallon gasoline underground storage tanks (USTs) are located in a UST complex north of the dispenser islands. In response to a failed gasoline tank integrity test, the USTs located at the site were removed in March 1986. During the UST removal work, 17 inches of separate phase hydrocarbons (SPH) were observed on the groundwater surface in the excavation pit. Groundwater was encountered at approximately 3 to 4 feet below ground surface (bgs). Approximately 780 gallons of SPH were recovered from the tank pit and appropriately disposed offsite. The tank pit was dewatered to approximately 15 feet bgs to allow installation of new replacement USTs. More than 900 cubic yards of soil were excavated and disposed offsite at appropriate disposal facilities. Five exploratory borings (B-1 through B-4 and MW-1) were advanced to depths ranging between 11 to 30 feet bgs to assess the extent of contamination. Boring MW-1 was subsequently converted into a groundwater monitoring well. An additional soil sample (TankPit-2) was collected from the tank pit at 2 feet bgs and soil samples were also collected from MW-1 and B-3 at unreported depths. The analytical results of the soil sample from MW-1 reported 57 parts per million (ppm) total hydrocarbons and <1 ppm benzene. The analytical results of the soil sample from B-3 reported 50 parts per million (ppm) total hydrocarbons and <1 ppm benzene. In October 1986, five 2-inch diameter groundwater monitoring wells (MW-2 through MW-6) were installed onsite at total depths of 20 feet bgs and were screened between 7 and 20 feet bgs. Soil samples were not collected for analyses during the respective well installations. In August 1989, a shallow groundwater/soil gas investigation (SGI) was conducted to determine if petroleum hydrocarbons had migrated offsite and to assist in determining placement of offsite monitoring wells. The SGI revealed contaminant concentrations along the eastern edge of the site extending along Industrial Way. The highest concentrations were detected in the northeastern corner of the site. In February 1990, two 4-inch diameter monitoring wells (MW-7 and MW-8) and one 6-inch diameter recovery well (RW-1) were installed. The wells were installed to total depths of approximately 20.5 to 21.5 feet bgs (MW-7 and MW-8) and approximately 26.5 feet bgs (RW-1). Based on a soil and groundwater investigation report by Exceltech, Inc. (Exceltech) dated August 1990, three groundwater monitoring wells (SC-1 through SC-3) were installed on the neighboring City of San Carlos property across from Industrial Way, as part of a separate environmental investigation. Upon permission from the City of San Carlos, the three monitoring wells SC-1 through SC-3 were incorporated into the investigation being conducted at the site. In May 1990, Exceltech performed an aquifer test at the site involving wells MW-1 through MW-5, RW-1, SC-1 and SC-2. A 4-hour step-drawdown pump test and a 54.5 hour constant discharge pump test were conducted on well RW-1. Drawdown in adjacent wells varied from 1.43 feet in MW-2 (17 feet southeast of RW-1) to 0.10 foot in MW-3 (60 feet southwest of RW-1). The hydraulic conductivity reported for wells MW-2 and RW-1 was 34.5 and 4.48 gallons per day per square foot, respectively. Exceltech estimated a pumping rate of 1.49 gallons per minute (gpm) could be sustained at the site. Approximately 6,000 gallons of groundwater generated during the pump test was appropriately disposed offsite. In February 1991, an interim groundwater extraction and carbon-based treatment system was installed onsite. The treatment system was permitted to discharge a

S101303207

maximum of 1,350 gallons per day of treated groundwater to the sanitary sewer. During operation between February 1991 and November 1992, the groundwater extraction and treatment system removed and treated a total of 245,000 gallons of groundwater and an estimated 300 gallons of SPH from the site. In November 1991, six exploratory soil borings (MB-1 through MB-6) were advanced onsite to the capillary fringe depth of 8.5 feet bgs. SPH was encountered at 2 to 6 feet bgs in MB-1 and at 4 to 5 feet bgs in boring MB-3. In January 1992, during the course of fuel line and dispenser island replacement work at the site, four soil samples (S-1 through S-4) were collected from shallow soils beneath the former dispenser locations, which coincide with the current dispenser locations. In November 1994, soil borings MW-9 and SP-1 were advanced onsite to depths of 21.5 feet bgs, and subsequently converted to a 2-inch groundwater monitoring well and a 2-inch air sparging point, respectively. On December 29, 1994, an air sparging (AS) test was conducted at the site using air sparge point SP-1 as the air injection point and wells MW-1 through MW-3 and RW-1 as the observation wells. Air sparging was performed for 135 minutes on SP-1, and yielded a maximum injection rate 4.5 standard cubic feet per minute (scfm) and maximum pressure of 15 pounds per square inch (psi). The AS test results indicated that an effective radius of influence of approximately 25 feet could be achieved at the site using an air injection rate of at least 5 standard cubic feet per minute (scfm) at 15 pounds per square inch (psi) at each point, with a recommended injection depth of approximately 18 to 20 feet bgs. In December 1995, one 550-gallon waste-oil UST, two hydraulic hoists and one oil-water separator (OWS) were removed from the site. No holes were noted in the removed UST; however, product sheen and odor were noted in the groundwater encountered at approximately 5 feet bgs in the UST excavation. Soil samples were collected at 5 feet bgs from the UST excavation, 4 feet bgs from the base of the OWS excavation, and at 5 feet bgs from the base of each hydraulic hoist excavation. Total petroleum recoverable hydrocarbons (TPRH) and total petroleum hydrocarbons as gasoline (TPHg) were reported at maximum concentrations of 21,000 and 3,300 milligrams per kilogram (mg/kg), respectively, in the hoist soil samples. Between February 4 and April 28, 2000, approximately 62,125 gallons of groundwater was extracted during 13 weekly events from a tank backfill well using a vacuum truck. In addition, approximately 875 gallons of groundwater was extracted from wells MW-1, MW-2, MW-3, MW-4, SP-1 and RW-1 using a vacuum truck. The vacuum truck filled to capacity, typically 5,000 gallons, in 30 to 45 minutes when extracting from the tank backfill well, equivalent to a maximum 170 gpm. The remaining wells dewatered during 10 to 45 minutes of pumping, yielding 50 to 200 gallons of water. No SPH were encountered during groundwater extraction from the tank backfill well. Residual SPH have been intermittently observed within monitoring wells MW-1 through MW-5 and RW-1, and were noted to correspond with low water levels, which cause SPH to preferentially drain to monitoring wells. The absence of observed SPH in the tank backfill well and intermittent observation of SPH in monitoring wells near the onsite UST complex was noted to be indicative of the limited volume of SPH remaining at the site. As of December 2001, remedial activities reportedly removed over 1,000 gallons of SPH from the site. Batch groundwater extraction was discontinued in June 2002 after a total of approximately 316,500 gallons of groundwater had been removed (Cambria). Overall, a total of approximately 561,500 gallons of

HOLLY 76 (Continued)

S101303207

groundwater has been removed from the site through the interim groundwater extraction system installed at the site in 1991 and the batch extraction program conducted at the site. In February 2001, two offsite monitoring wells (MW-10 and MW-11) were installed to depths of 20 feet bgs. In May 2002, four multi-level vapor probes (VP-1 through VP-4) were installed onsite to approximately 5 feet bgs. The probes were used to evaluate hydrocarbon inhalation exposures via indoor air. Probe VP-1 is located near the northern property boundary and probes VP-2 through VP-4 are located near the USTs and/or dispensers. The vapor probe clusters consist of three six-inch long screened intervals connected to the surface using 3/8-inch diameter plastic tubing. Each vapor probe cluster is screened from 1.5 to 2.0 feet bgs, from 3.0 to 3.5 feet bgs and from 4.5 to 5.0 feet bgs. Soil vapor samples were collected from vapor probes VP-1 through VP-4 in June 2002, August 2003, and April 2004. On January 18, 2007, Green Environment, Inc. (GEI) submitted a Well Decommissioning Report for wells owned by the City of San Carlos. The report stated that wells SC-2 through SC-4 were destroyed on November 22, 2006. Well SC-1 could not be located for destruction and has been missing since 1994. Several attempts were made to find the well between August and November of 2006, but were unsuccessful. In a letter dated June 16, 2006, GPP requested submittal of a Corrective Action Plan (CAP) to address petroleum hydrocarbons in soil and groundwater at the site. In response to the GPP request, SECOR submitted a Corrective Action Plan and Site Conceptual Model dated November 21, 2006. GPP reviewed the November 21, 2006 CAP/SCM and, in a letter dated November 29, 2007, directed submittal of a work plan for additional assessment to determine the targeted zone of contamination prior to approval of a CAP. Additionally, GPP required submittal of an updated SCM to identify potential data gaps with recommendations to address any identified data gaps. In accordance with GPP directives, SECOR submitted a 2005/2006 Annual Status Report, Updated Site Conceptual Model, and Work Plan for Additional Site Assessment dated February 15, 2008. In the letter dated November 20, 2008, the GPP requested an addendum to SECOR's report that addressed the following topics: h Extent of Dissolved Phase Groundwater Contamination; h Hydrogeology and Subsurface Lithology; h Targeted Remediation Zones V Used Oil Tank and Hydraulic Hoist Area; and h Feasibility Studies V Groundwater Extraction and Soil Vapor Extraction. Stantec submitted Addendum to Work Plan for Additional Site Assessment, dated January 23, 2009. The addendum was approved by the GPP in a letter dated April 15, 2009. Per SWRCB Resolution 2009-0042, Stantec submitted a Proposed Groundwater Monitoring and Sampling Schedule to the GPP, dated July 28, 2009. The proposal recommended groundwater monitoring and sampling on a quarterly basis of newly installed wells MW-12 through MW-15 through the third quarter of 2010, and all previously existing wells on a semi-annual basis during the months of May and November. SPH recovery will continue on a monthly basis. Based on discussions with the GPP, this reduction to the monitoring and sampling schedule will be implemented during the fourth quarter.

Violation Notes: Returned to compliance on 07/24/2020. It does not appear that the 2019 test results were ever submitted to SMCUPA. Provide the test results from 2019, and the test results from today within 30 days, and ensure copies are kept on site at the facility.

Violation Division: San Mateo County Environmental Health
Violation Program: UST
Violation Source: CERS

Site ID: 122957
Site Name: HOLLY 76
Violation Date: 07-24-2019
Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)

Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,- 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes: Returned to compliance on 10/17/2019. Overfill testing has yet to be completed at this site for any of the tanks. All buckets are contained within sumps. Schedule Overfill testing within 30 days and notify SMCUPA at least 48 hours prior to testing. Overfill test was supposed to have been completed by October 13, 2018, and facility is now over 9 months overdue for this requirement. DO reports have been documenting that overfill testing has not been completed.

prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, - 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes: Returned to compliance on 10/17/2019. Overfill testing has yet to be completed at this site for any of the tanks. All buckets are contained within sumps. Schedule Overfill testing within 30 days and notify SMCUPA at least 48 hours prior to testing. Overfill test was supposed to have been completed by October 13, 2018, and facility is now over 9 months overdue for this requirement. DO reports have been documenting that overfill testing has not been completed.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 07-24-2020
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On site to witness annual monitoring certification for 3 fuel tanks.
All testing passed during the onsite inspection. Records were reviewed outside facility. Due to COVID-19 concerns, SMCUPA did not enter the building and did not witness the audible/visual alarms on the Veeder Root panel, however, Jeff Conger from confirmed the alarms and provided the printout showing that each alarm had been activated.

Hazardous Waste Summary:

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: D006
Waste Description: CADMIUM

Waste Code: D007
Waste Description: CHROMIUM

Waste Code: D008
Waste Description: LEAD

Waste Code: D011
Waste Description: SILVER

Waste Code: F006
Waste Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Waste Code: F019
Waste Description: WASTEWATER TREATMENT SLUDGES FROM THE CHEMICAL CONVERSION COATING OF ALUMINUM, EXCEPT FROM ZIRCONIUM PHOSPHATING IN ALUMINUM CAN WASHING WHEN SUCH PHOSPHATING IS AN EXCLUSIVE CONVERSION COATING PROCESS.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

**HAZARDOUS WASTE BIENNIAL REPORTER
STATE MASTER**

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

WDS:

Name: HYTECH PLATING INC
Address: 1014 Center St
City: SAN CARLOS
Facility ID: San Francisco Bay 41I010263
Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
Subregion: 2
Facility Telephone: 6505934566
Facility Contact: RIGO SANTOS
Agency Name: WENDEL WESSBECHER
Agency Address: 1011 American St
Agency City,St,Zip: San Carlos 940705303

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RISK AND TECHNOLOGY REVIEW

HAZARDOUS AIR POLLUTANT MAJOR

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

STATE MASTER

HAZARDOUS WASTE BIENNIAL REPORTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F006
Waste Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Waste Code: F007
Waste Description: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

Waste Code: P106
Waste Description: SODIUM CYANIDE (OR) SODIUM CYANIDE NA(CN)

Waste Code: D008
Waste Description: LEAD

Waste Code: D009
Waste Description: MERCURY

Waste Code: D011
Waste Description: SILVER

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F006
Waste Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Waste Code: F007
Waste Description: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

Waste Code: P106
Waste Description: SODIUM CYANIDE (OR) SODIUM CYANIDE NA(CN)

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 01/31/1991
Comments: Completed Removal Action. Approximately 800 cubic yards of PCB impacted soil were excavated to a depth of 12-30 inches and disposed at an offsite landfill. Excavated soil was replaced with compacted clean fill at four separate areas around the plant. In addition, approximately fifty 55-gallon drums of miscellaneous wastes (vacuumed fluids, etc.) and fifteen 55-gallon drums of decontaminated storm sewer system were removed from the site. Removal activities were under the oversight of DTSC and San Mateo County Environmental Health. Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Assessment Report
Completed Date: 08/31/1989
Comments: Completed Preliminary Assessment identifying PCBs as the contaminant of concern. The State Department of Health Services (DHS) also conducted an investigation in 1982 and sewer drain sediment samples detected up to 4.9 mg/L PCBs. Environmental investigations detected PCB in soil (up to 3000 parts per million (ppm) and asphalt (up to 1200 ppm) along the northwest side of the manufacturing building.

Completed Document Type: Operation and Maintenance Report

Completed Date: 02/18/2014

Comments: The Site owner performed an inspection on February 17, 2014 to verify compliance with the Land Use Covenant that is in place for the Site. There has been no change in land use and no evidence of cap disturbance was observed during the inspection. The inspection report documented that the all uses and activities on the Site were in compliance with the restrictions and requirements of the Land Use Covenant.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 02/04/2016
Comments: Ben Magana, the facility manager for Delta Star, performed an annual inspection on February 1, 2016 and noted in the inspection report that there has been no change in land use and no evidence of cap disturbance was observed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 05/08/2013
Comments: The purpose of this letter is to offer the owner/RP the opportunity to perform the annual inspections and to submit a report of the inspection to DTSC. Otherwise, DTSC would continue to perform the inspections and in the future the owner will be sent an invoice for the cost to perform this activity.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 12/22/2008
Comments: It was observed that no apparent cracking appeared in the capped area. Additionally, a sign was posted in the vicinity of the cap, as specified in the Deed Restriction.

grading, excavation or building activity can occur near the cap. Last year's inspection noted that no sign was posted as described in the Deed Restriction.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 02/17/2012
Comments: Delta Star, the Site owner and responsible party, performed an annual site inspection on March 10, 2015 to verify compliance with the Land Use Covenant restrictions and submitted to DTSC a report documenting the inspection. The inspection report indicated that the Site conditions have not changed and the PCB-contaminated soils remain covered by the cap. No activities prohibited by the Land Use Covenant were observed. DTSC prepared a Five-Year Review Report and, based on the results of the inspection, concluded that the remedy selected for the Site continues to be protective of human health and the environment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 01/26/2010
Comments: No apparent cracks appeared in the capped area. However, no sign was posted in the vicinity of the capped area. The sign should state that no grading, excavation or building activity can occur near the capped area. The General Manager will post a sign and notify DTSC when the task is completed.

Background Info:	The 5.6-acre facility has been used since 1961 to manufacture, test, and repair electrical power supply transformers and mobile substations. H.K. Porter Company, Inc. manufactured electrical transformers filled with polychlorinated byphenyl (PCB)-based oils and coolants between 1962 and 1974. PCBs were introduced to onsite soils from periodic spills and improper handling. Based on available records, the last PCB containing transformers were shipped from the facility in 1974 and the use of PCBs was discontinued. The State Department of Health Services (DHS) conducted an investigation in 1982 and sewer drain sediment samples detected up to 4.9 mg/L PCBs. Environmental investigations detected PCB in soil (up to 440 parts per million (ppm) and asphalt (up to 1200 ppm) along the northwest side of the manufacturing building.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/20/2021	Source: EPA
Date Data Arrived at EDR: 11/05/2021	Telephone: N/A
Date Made Active in Reports: 11/29/2021	Last EDR Contact: 12/29/2021
Number of Days to Update: 24	Next Scheduled EDR Contact: 04/11/2022
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/20/2021

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 10/20/2021	Source: EPA
Date Data Arrived at EDR: 11/05/2021	Telephone: 800-424-9346

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 09/13/2021	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/15/2021	Telephone: (415) 495-8895
Date Made Active in Reports: 10/12/2021	Last EDR Contact: 12/17/2021

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 09/13/2021	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/15/2021	Telephone: (415) 495-8895
Date Made Active in Reports: 10/12/2021	Last EDR Contact: 12/17/2021

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 09/13/2021	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/15/2021	Telephone: (415) 495-8895

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

US INST CONTROLS: Institutional Controls Sites List

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/23/2021
Date Data Arrived at EDR: 08/10/2021
Date Made Active in Reports: 11/08/2021
Number of Days to Update: 90

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ENE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
SAN MATEO	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data:*

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	5 inches		Not reported	Not reported	Max: 0.01 Min: 0	Max: Min:

Soil Map ID: 2

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program

State Water Resources Control Board

Telephone: 916-341-5577

The GAMA Program is California's comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Health Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations

Source: Dept of Conservation, Geologic Energy Management Division

Telephone: 916-323-1779

Oil and Gas well locations in the state.

California Earthquake Fault Lines

Source: California Division of Mines and Geology

The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United States Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon

Source: Department of Public Health

Telephone: 916-210-8558

Radon Database for California

PHYSICAL SETTING SOURCE RECORDS SEARCHED

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRRA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Ramboll were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Ramboll were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquiries (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

EDR Property Tax Map Report

Environmental Data Resources, Inc.'s EDR Property Tax Map Report is designed to assist environmental professionals in evaluating potential environmental conditions on a target property by understanding property boundaries and other characteristics. The report includes a search of available property tax maps, which include information on boundaries for the target property and neighboring properties, addresses, parcel identification numbers, as well as other data typically used in property location and identification.

Thank you for your business.

Please contact EDR at 1-800-352-0050
with any questions or comments.

EDR Environmental Lien and AUL Search

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.

Please contact EDR at 1-800-352-0050
with any questions or comments.

EDR NEPASearch DESCRIPTION

The National Environmental Policy Act of 1969 (NEPA) requires that Federal agencies include in their decision-making processes appropriate and careful consideration of all environmental effects and actions, analyze potential environmental effects of proposed actions and their alternatives for public understanding and scrutiny, avoid or minimize adverse effects of proposed actions, and restore and enhance environmental quality as much as possible.

The EDR NEPASearch Map Report provides information which may be used, in conjunction with additional research, to determine whether a proposed site or action will have significant environmental effect.

TARGET PROPERTY ADDRESS

1026 BRANSTEN ROAD
1026 BRANSTEN RD
SAN CARLOS, CA 94070

Inquiry #: 06812423.14r
Date: 1/7/22

TARGET PROPERTY COORDINATES

Latitude (North):	37.505630 - 37° 30' 20.3"
Longitude (West):	122.255112 - 122° 15' 18.4"
Universal Transverse Mercator:	Zone 10
UTM X (Meters):	565837.9
UTM Y (Meters):	4151022.0

The report provides maps and data for the following items (where available). Search results are provided in the Map Findings Summary on page 2 of this report.

NATURAL AREAS MAP FINDINGS

Federal Endangered Species from the U.S. Fish and Wildlife for SAN MATEO County

Group:Amphibians

Common Name: California red-legged frog
Status: Threatened

Scientific Name: *Rana draytonii*

Common Name: California tiger Salamander
Status: Threatened

Scientific Name: *Ambystoma californiense*

Group:Birds

Common Name: California least tern
Status: Endangered

Scientific Name: *Sterna antillarum browni*

Common Name: Marbled murrelet
Status: Threatened

Scientific Name: *Brachyramphus marmoratus*

Common Name: Western snowy plover
Status: Threatened

Scientific Name: *Charadrius alexandrinus nivosus*

Common Name: California clapper rail
Status: Endangered

Scientific Name: *Rallus longirostris obsoletus*

Common Name: Yellow-billed Cuckoo
Status: Threatened

Scientific Name: *Coccyzus americanus*

Common Name: Short-tailed albatross
Status: Endangered

Scientific Name: *Phoebastria (=Diomedea) albatrus*

Group:Conifers and Cycads

Common Name: Santa Cruz cypress
Status: Endangered

Scientific Name: *Cupressus abramsiana*

Group:Crustaceans

Common Name: Vernal pool tadpole shrimp
Status: Endangered

Scientific Name: *Lepidurus packardii*

Common Name: Vernal pool fairy shrimp
Status: Threatened

Scientific Name: *Branchinecta lynchi*

Group:Fishes

Common Name: Tidewater goby
Status: Endangered

Scientific Name: *Eucyclogobius newberryi*

Common Name: Delta smelt
Status: Threatened

Scientific Name: *Hypomesus transpacificus*

Common Name: green sturgeon
Status: Threatened

Scientific Name: *Acipenser medirostris*

Group:Flowering Plants

Common Name: Fountain thistle
Status: Endangered

Scientific Name: *Cirsium fontinale* var. *fontinale*

Common Name: Showy Indian clover

Scientific Name: *Trifolium amoenum*

NATURAL AREAS MAP FINDINGS

Federal Endangered Species from the U.S. Fish and Wildlife for SAN MATEO County (Continued...)

Status: Endangered

Common Name: Presidio Manzanita

Status: Endangered

Scientific Name: *Arctostaphylos hookeri* var. *ravenii*

Common Name: Hickman's potentilla

Status: Endangered

Scientific Name: *Potentilla hickmanii*

Common Name: Contra Costa goldfields

Status: Endangered

Scientific Name: *Lasthenia conjugens*

Common Name: Marin dwarf-flax

Status: Threatened

Scientific Name: *Hesperolinon congestum*

Common Name: Franciscan manzanita

Status: Endangered

Scientific Name: *Arctostaphylos franciscana*

Common Name: White-rayed pentachaeta

Status: Endangered

Scientific Name: *Pentachaeta bellidiflora*

Common Name: San Mateo woolly sunflower

Status: Endangered

Scientific Name: *Eriophyllum latilobum*

Common Name: San Francisco lessingia

Status: Endangered

Scientific Name: *Lessingia germanorum* (=L.g. var. *germanorum*)

Common Name: California seablite

Status: Endangered

Scientific Name: *Suaeda californica*

Common Name: Robust spineflower

Status: Endangered

Scientific Name: *Chorizanthe robusta* var. *robusta*

Group: Insects

Common Name: Myrtle's silverspot butterfly

Status: Endangered

Scientific Name: *Speyeria zerene myrtleae*

Common Name: San Bruno elfin butterfly

Status: Endangered

Scientific Name: *Callophrys mossii bayensis*

Common Name: Mission blue butterfly

Status: Endangered

Scientific Name: *Icaricia icarioides missionensis*

Common Name: Bay checkerspot butterfly

Status: Threatened

Scientific Name: *Euphydryas editha bayensis*

Common Name: Callippe silverspot butterfly

Status: Endangered

Scientific Name: *Speyeria callippe callippe*

Group: Mammals

Common Name: Guadalupe fur seal

Status: Threatened

Scientific Name: *Arctocephalus townsendi*

Common Name: Salt marsh harvest mouse

Status: Endangered

Scientific Name: *Reithrodontomys raviventris*

NATURAL AREAS MAP FINDINGS

Federal Endangered Species from the U.S. Fish and Wildlife for SAN MATEO County (Continued...)

Common Name: Southern sea otter	Scientific Name: <i>Enhydra lutris nereis</i>
Status: Threatened	

Group:Reptiles

Common Name: Olive ridley sea turtle	Scientific Name: <i>Lepidochelys olivacea</i>
Status: Threatened	

Common Name: Green sea turtle	Scientific Name: <i>Chelonia mydas</i>
Status: Threatened	

Common Name: San Francisco garter snake	Scientific Name: <i>Thamnophis sirtalis tetrataenia</i>
Status: Endangered	

Common Name: Alameda whipsnake (=striped racer)	Scientific Name: <i>Masticophis lateralis euryxanthus</i>
Status: Threatened	

Common Name: Leatherback sea turtle	Scientific Name: <i>Dermochelys coriacea</i>
Status: Endangered	

Group:Snails

Common Name: White Abalone	Scientific Name: <i>Haliotis sorenseni</i>
Status: Endangered	

Federal Endangered Species from the U.S. Fish and Wildlife for CA State

Group:Amphibians

Common Name: Black toad	Scientific Name: <i>Bufo exsul</i>
Status: Species of Concern	

Common Name: Limestone salamander	Scientific Name: <i>Hydromantes brunus</i>
Status: Under Review	

Common Name: Lesser slender salamander	Scientific Name: <i>Batrachoseps minor</i>
Status: Under Review	

Common Name: Kern Plateau salamander	Scientific Name: <i>Batrachoseps robustus</i>
Status: Under Review	

Common Name: California tiger Salamander	Scientific Name: <i>Ambystoma californiense</i>
Status: Endangered	

Common Name: Large-blotched ensatina	Scientific Name: <i>Ensatina eschscholtzii klauberi</i>
Status: Species of Concern	

Common Name: Oregon spotted frog	Scientific Name: <i>Rana pretiosa</i>
Status: Threatened	

Common Name: Lowland leopard (=San Felipe leopard) frog	Scientific Name: <i>Rana yavapaiensis</i>
Status: Species of Concern	

Common Name: Del Norte salamander	Scientific Name: <i>Plethodon elongatus</i>
Status: Species of Concern	

NATURAL AREAS MAP FINDINGS

Federal Endangered Species from the U.S. Fish and Wildlife for CA State (Continued...)

Common Name: Owens Valley web-toes salamander Status: Species of Concern	Scientific Name: Hydromantes sp.
Common Name: Mount Lyell salamander Status: Species of Concern	Scientific Name: Hydromantes platycephalus
Common Name: Foothill yellow-legged frog Status: Under Review	Scientific Name: Rana boylei
Common Name: Breckenridge Mountain slender salamander Status: Species of Concern	Scientific Name: Batrachoseps sp.
Common Name: Tailed frog Status: Species of Concern	Scientific Name: Ascaphus truei
Common Name: Channel Islands slender salamander Status: Species of Concern	Scientific Name: Batrachoseps pacificus pacificus
Common Name: Yellow-blotched ensatina Status: Species of Concern	Scientific Name: Ensatina eschscholtzii croceator
Common Name: Western spadefoot Status: Under Review	Scientific Name: Spea hammondi
Common Name: Northern red-legged frog Status: Species of Concern	Scientific Name: Rana aurora aurora
Common Name: Relictual slender salamander Status: Under Review	Scientific Name: Batrachoseps relictus
Common Name: Cascades frog Status: Under Review	Scientific Name: Rana cascadae
Common Name: Inyo Mountains slender salamander Status: Under Review	Scientific Name: Batrachoseps campi
Common Name: Shasta salamander Status: Under Review	Scientific Name: Hydromantes shastae
Common Name: Arizona toad Status: Under Review	Scientific Name: Bufo microscaphus microscaphus
Common Name: Kern Canyon slender salamander Status: Under Review	Scientific Name: Batrachoseps simatus

Group: Arachnids

Common Name: Lee's micro-blind harvestman Status: Species of Concern	Scientific Name: Microcina leei
Common Name: Jung's micro-blind harvestman Status: Under Review	Scientific Name: Microcina jungi
Common Name: Carlow's Cave pseudoscorpion Status: Species of Concern	Scientific Name: Aphrastochthonius similis

NATURAL AREAS MAP FINDINGS

Federal Endangered Species from the U.S. Fish and Wildlife for CA State (Continued...)

Common Name: Empire Cave pseudoscorpion Scientific Name: Microcreagris imperialis
Status: Species of Concern

Common Name: Santa Cruz telemid spider Scientific Name: Telema sp.
Status: Species of Concern

Common Name: Tiburon micro-blind harvestman Scientific Name: Microcina tiburona
Status: Species of Concern

Common Name: Hom's micro-blind harvestman Scientific Name: Microcina homi
Status: Species of Concern

Common Name: Aalbu's cave pseudoscorpion Scientific Name: Archeolarca aalbui
Status: Species of Concern

Common Name: Music Hall Cave pseudoscorpion Scientific Name: Pseudogarypus orpheus
Status: Species of Concern

Common Name: Grubbs' cave pseudoscorpion Scientific Name: Aphrastochthonius grubbsi
Status: Species of Concern

Common Name: Lum's micro-blind harvestman Scientific Name: Microcina lumi
Status: Species of Concern

Common Name: Edgewood blind harvestman Scientific Name: Calcina minor
Status: Species of Concern

Common Name: Lacey's cave pseudoscorpion Scientific Name: Larca laceyi
Status: Species of Concern

Common Name: Monterey Dunes scorpion Scientific Name: Pauroctonus maritimus
Status: Species of Concern

Group: Birds

Common Name: Belding's savannah sparrow Scientific Name: Passerculus sandwichensis beldingi
Status: Species of Concern

Common Name: Spotted Towhee Scientific Name: Pipilo maculatus clementae
Status: Species of Concern

Common Name: Xantus's Murrelet Scientific Name: Synthliboramphus hypoleucus
Status: Candidate

Common Name: Bell's sage sparrow Scientific Name: Amphispiza belli belli
Status: Species of Concern

Common Name: Cooper's hawk Scientific Name: Accipiter cooperii
Status: Species of Concern

Common Name: Grasshopper sparrow Scientific Name: Ammodramus savannarum ssp. perpallidus
Status: Species of Concern

Common Name: Black-backed woodpecker Scientific Name: picoides arcticus
Status: Under Review

NATURAL AREAS MAP FINDINGS

Federal Endangered Species from the U.S. Fish and Wildlife for CA State (Continued...)

Common Name: Tufted Puffin Status: Under Review	Scientific Name: <i>Fratercula cirrhata</i>
Common Name: Sharp shinned hawk Status: Species of Concern	Scientific Name: <i>Accipiter striatus</i>
Common Name: Southern California rufous-crowned sparrow Status: Species of Concern	Scientific Name: <i>Aimophila ruficeps canescens</i>
Common Name: California spotted Owl Status: Under Review	Scientific Name: <i>Strix occidentalis occidentalis</i>
Common Name: Tricolored blackbird Status: Under Review	Scientific Name: <i>Agelaius tricolor</i>
Common Name: San Joaquin LeConte's thrasher Status: Species of Concern	Scientific Name: <i>Toxostoma lecontei macmillanorum</i>
Common Name: Eagle Mountain scrub jay Status: Species of Concern	Scientific Name: <i>Aphelocoma coerulescens cana</i>
Common Name: Elegant tern Status: Species of Concern	Scientific Name: <i>Sterna elegans</i>
Common Name: Least bittern Status: Species of Concern	Scientific Name: <i>Ixobrychus exilis hesperis</i>
Common Name: Song Sparrow Status: Species of Concern	Scientific Name: <i>Melospiza melodia pusillula</i>
Common Name: Little willow flycatcher Status: Species of Concern	Scientific Name: <i>Empidonax traillii brewsteri</i>
Common Name: Song Sparrow Status: Species of Concern	Scientific Name: <i>Melospiza melodia samuelis</i>
Common Name: Yuma clapper rail Status: Endangered	Scientific Name: <i>Rallus longirostris yumanensis</i>
Common Name: Southwestern willow flycatcher Status: Endangered	Scientific Name: <i>Empidonax traillii extimus</i>
Common Name: Large-billed savannah sparrow Status: Species of Concern	Scientific Name: <i>Passerculus sandwichensis rostratus</i>
Common Name: Common Yellowthroat Status: Species of Concern	Scientific Name: <i>Geothlypis trichas sinuosa</i>
Common Name: Black tern Status: Species of Concern	Scientific Name: <i>Chlidonias niger</i>
Common Name: Song Sparrow Status: Species of Concern	Scientific Name: <i>Melospiza melodia maxillaris</i>
Common Name: Fulvous whistling duck	Scientific Name: <i>Dendrocygna bicolor</i>

NATURAL AREAS MAP FINDINGS

Federal Endangered Species from the U.S. Fish and Wildlife for CA State (Continued...)

Status: Species of Concern

Group:Conifers and Cycads

Common Name: Monterey pine
Status: Species of Concern

Scientific Name: *Pinus radiata*

Common Name: Monterey cypress
Status: Species of Concern

Scientific Name: *Cupressus macrocarpa*

Common Name: Torrey Island pine
Status: Species of Concern

Scientific Name: *Pinus torreyana insularis*

Common Name: Bolander's beach pine
Status: Species of Concern

Scientific Name: *Pinus contorta bolanderi*

Common Name: Yellow cedar
Status: Under Review

Scientific Name: *Calliptropis nootkatensis*

Common Name: Mendocino cypress
Status: Species of Concern

Scientific Name: *Cupressus goveniana pigmaea*

Common Name: Torrey, Del Mar pine
Status: Species of Concern

Scientific Name: *Pinus torreyana torreyana*

Common Name: Tecate cypress
Status: Species of Concern

Scientific Name: *Cupressus forbesii*

Group:Crustaceans

Common Name: Longhorn fairy shrimp
Status: Endangered

Scientific Name: *Branchinecta longiantenna*

Common Name: Conservancy fairy shrimp
Status: Endangered

Scientific Name: *Branchinecta conservatio*

Common Name: [Unnamed] isopod
Status: Species of Concern

Scientific Name: *Caecidotea tomalensis*

Common Name: Mono Lake brine shrimp
Status: Species of Concern

Scientific Name: *Artemia monica*

Common Name: Vernal pool tadpole shrimp
Status: Endangered

Scientific Name: *Lepidurus packardii*

Common Name: California freshwater shrimp
Status: Endangered

Scientific Name: *Syncaris pacifica*

Group:Ferns and Allies

Common Name: No common name
Status: Species of Concern

Scientific Name: *Botrychium crenulatum*

Common Name: Crater Lake grape fern
Status: Species of Concern

Scientific Name: *Botrychium pumicola nealleyi*

NATURAL AREAS MAP FINDINGS

Federal Endangered Species from the U.S. Fish and Wildlife for CA State (Continued...)

Group: Fishes

Common Name: Klamath largescale sucker Status: Species of Concern	Scientific Name: <i>Catostomus snyderi</i>
Common Name: Goose Lake sucker Status: Species of Concern	Scientific Name: <i>Catostomus occidentalis lacusanserinus</i>
Common Name: Sacramento perch Status: Species of Concern	Scientific Name: <i>Archoplites interruptus</i>
Common Name: green sturgeon Status: Threatened	Scientific Name: <i>Acipenser medirostris</i>
Common Name: Pit roach Status: Species of Concern	Scientific Name: <i>Lavinia symmetricus mitrulus</i>
Common Name: longfin smelt Status: Candidate	Scientific Name: <i>Spirinchus thaleichthys</i>
Common Name: Warner Valley redband trout Status: Species of Concern	Scientific Name: <i>Oncorhynchus mykiss</i> ssp.
Common Name: Amargosa Canyon speckled dace Status: Species of Concern	Scientific Name: <i>Rhinichthys osculus</i> ssp.
Common Name: Russian River tule perch Status: Species of Concern	Scientific Name: <i>Hysterocarpus traskii</i> pomo
Common Name: Benton Valley speckled dace Status: Species of Concern	Scientific Name: <i>Rhinichthys osculus</i> ssp.
Common Name: Long Valley speckled dace Status: Species of Concern	Scientific Name: <i>Rhinichthys osculus</i> ssp.
Common Name: Shoshone pupfish Status: Species of Concern	Scientific Name: <i>Cyprinodon nevadensis shoshone</i>
Common Name: Santa Ana speckled dace Status: Species of Concern	Scientific Name: <i>Rhinichthys osculus</i> ssp.
Common Name: Red Hills roach Status: Species of Concern	Scientific Name: <i>Lavinia symmetricus</i> ssp.
Common Name: Owens speckled dace Status: Species of Concern	Scientific Name: <i>Rhinichthys osculus</i> ssp.
Common Name: Steelhead Status: Threatened	Scientific Name: <i>Oncorhynchus</i> (=Salmo) <i>mykiss</i>
Common Name: Arroyo chub Status: Species of Concern	Scientific Name: <i>Gila orcuttii</i>
Common Name: Jenny Creek sucker Status: Species of Concern	Scientific Name: <i>Catostomus rimiculus</i> ssp.

NATURAL AREAS MAP FINDINGS

Federal Endangered Species from the U.S. Fish and Wildlife for CA State (Continued...)

Common Name: Steelhead	Scientific Name: <i>Oncorhynchus</i> (=Salmo) mykiss
Status: Under Review

Endangered Species Codes

Global Imperilment Rank Codes - GRANK: Priority rank (1-5) based on number of occurrences through element's range.

G1 - Critically imperiled globally because of extreme rarity (5 or fewer occurrences or very few remaining individuals or acres) or because of some factor(s) making it especially vulnerable to extinction.

G2 - Imperiled globally because of rarity (6-20 occurrences or few remaining individuals or acres) or because of some factor(s) making it especially vulnerable to extinction.

G3 - Vulnerable. Either very rare and local throughout its range or found locally (even abundantly at some of its locations) in a restricted range. (e.g., a single western state, a physiographic region in the East) or because of other factors making it vulnerable to extinction throughout its range; in terms of occurrences, in the range of 21 - 100.

G4 - Apparently secure globally, though it may be quite rare in parts of its range, especially at the periphery.

G5 - Demonstrably secure globally, though it may be quite rare in parts of its range, especially at the periphery.

GH - Possibly extinct or eliminated. Of historical occurrence throughout its range, i.e., formerly part of the established biota, with the expectation that it may be rediscovered (e.g., Bachman's Warbler). For historic and ecological communities, no likelihood for rediscovery, but possibility of restoration (e.g., American Chestnut Forest).

GNA - Not applicable to the element at a global level. Includes Hybrids, Invasive species, species of Domestic Origin, Cultural communities, and communities that have been managed.

GNR - Rank not assigned.

GU - Unrankable. Possibly in peril range-wide but status uncertain; more information is needed.

GX - Believed to be extinct throughout range (e.g., Passenger Pigeon) with virtually no likelihood that it will be rediscovered. For an ecological community, no restoration potential.

G#G# - Rank with a range. Used to show the range of uncertainty, will not skip more than 1 rank.

T-RANKS - T subranks are given to global ranks when a subspecies, variety, or race is considered at the state level. The subrank is made up of a "T" plus a number or letter (1, 2, 3, 4, 5, H, U, X) with the same ranking rules as a full species.

State Rank Codes - SRANK: Priority rank (1-5) based on number of occurrences through element's range.

S1 - Critically imperiled, Extremely rare. Typically 5 or fewer estimated occurrences in the state, or only a few remaining individuals, may be especially vulnerable to extirpation.

S2 - Imperiled, very rare. Typically between 5 and 20 estimated occurrences or with many individuals in fewer occurrences, often susceptible to becoming extirpated.

S3 - Vulnerable, rare to uncommon. Typically between 21 and 100 estimated occurrences, may have fewer occurrences but with large number of individuals in some populations, may be susceptible to large-scale disturbances.

S4 - Common, apparently secure under present conditions. Typically 100 or more estimated occurrences, but may be fewer with many large populations, may be restricted to only a portion of the state, usually not susceptible to immediate threats.

S5 - Demonstrably widespread, common, and secure in the state and essentially ineradicable under present conditions.

SA - Accidental.

SH - Historically known from the state, but not verified for an extended period, usually 15 years.

SU - Unrankable, not assessed. Possibly in peril in the state, but status uncertain, more information is needed. When possible, the most likely rank is assigned and a question mark is added to show uncertainty.

SX - Apparently extirpated from state.

SNR - Unranked. The state rank not yet assessed.

SRF - Reported falsely in the state.

SE - Exotic for local area.

SZ - Birds that migrate through the state but have no identifiable location.

S#S# - State level of G#G#.

Endangered Species Codes, (Continued...)

General Ranking Notes

Q - A "Q" in the global rank indicates the element's taxonomic classification as a species is a matter of conjecture among scientists.

A - Accidental - far outside usual range

C - Captive or Cultivated only

HYB - Element represents an interspecific hybrid, not a species

R - Reported but not confirmed

Z - Zero Occurrences

Breeding Status Qualifiers (animals only)

B - Breeding population of the element

N - Nonbreeding population of the element

M - Migrant population

WETLANDS CLASSIFICATION SYSTEM

National Wetland Inventory Maps are produced by the U.S. Fish and Wildlife Service, a sub-department of the U.S. Department of the Interior. In 1974, the U.S. Fish and Wildlife Service developed a criteria for wetland classification with four long range objectives:

- to describe ecological units that have certain homogeneous natural attributes,
- to arrange these units in a system that will aid decisions about resource management,
- to furnish units for inventory and mapping, and
- to provide uniformity in concepts and terminology throughout the U.S.

High altitude infrared photographs, soil maps, topographic maps and site visits are the methods used to gather data for the productions of these maps. In the infrared photos, wetlands appear as different colors and these wetlands are then classified by type. Using a hierarchical classification, the maps identify wetland and deepwater habitats according to:

- system
- subsystem
- class
- subclass
- modifiers

(as defined by Cowardin, et al. U.S. Fish and Wildlife Service FWS/OBS 79/31. 1979.)

The classification system consists of five systems:

1. marine
2. estuarine
3. riverine
4. lacustrine
5. palustrine

The marine system consists of deep water tidal habitats and adjacent tidal wetlands. The riverine system consists of all wetlands contained within a channel. The lacustrine systems includes all nontidal wetlands related to swamps, bogs & marshes. The estuarine system consists of deepwater tidal habitats and where ocean water is diluted by fresh water. The palustrine system includes nontidal wetlands dominated by trees and shrubs and where salinity is below .5% in tidal areas. All of these systems are divided in subsystems and then further divided into class.

National Wetland Inventory Maps are produced by transferring gathered data on a standard 7.5 minute U.S.G.S. topographic map. Approximately 52 square miles are covered on a National Wetland Inventory map at a scale of 1:24,000. Electronic data is compiled by digitizing these National Wetland Inventory Maps.

MODIFIERS

In order to more adequately describe wetland and deepwater habitats one or more of the water regime, water chemistry, soil, or special modifiers may be applied at the class or lower level in the hierarchy. The farmed modifier may also be applied to the ecological system.

WATER REGIME				WATER CHEMISTRY			SOIL	SPECIAL MODIFIERS
Non-Tidal	Tidal	Coastal	HalinityInlandSalinitypHModifiersfor	all Fresh Water				
A Temporarily Flooded	H Permanently Flooded	K Artificially Flooded	*S Temporary-Tidal	1 Hyperhaline	7 Hypersaline		g Organic	b Beaver
B Saturated	J Intermittently Flooded	L Subtidal	*R Seasonal-Tidal	2 Euhaline	8 Eusaline	a Acid	n Mineral	d Partially Drained/Ditched
C Seasonally Flooded	K Artificially Flooded	M Irregularly Exposed	*T Semipermanent -Tidal	3 Mixohaline (Brackish)	9 Mixosaline	t Circumneutral		f Farmed
D Seasonally Flooded/ Well Drained	W Intermittently Flooded/Temporary	N Regularly Flooded	V Permanent -Tidal	4 Polyhaline	0 Fresh	i Alkaline		h Diked/Impounded
E Seasonally Flooded/ Saturated	Y Saturated/Semipermanent/ Seasonal	P Irregularly Flooded	U Unknown	5 Mesohaline				r Artificial Substrate
F Semipermanently Flooded	Z Intermittently Exposed/Permanent	*These water regimes are only used in tidally influenced, freshwater systems.		6 Oligohaline				s Spoil
G Intermittently Exposed	U Unknown			0 Fresh				x Excavated

KEY CONTACTS & GOVERNMENT RECORDS SEARCHED

Various Federal laws and executive orders address specific environmental concerns. NEPA requires the responsible offices to integrate to the greatest practical extent the applicable procedures required by these laws and executive orders. EDR provides key contacts at agencies charged with implementing these laws and executive orders to supplement the information contained in this report.

National Register of Historic Places:

The National Register of Historic Places is the official federal list of districts, sites, buildings, structures, and objects significant in American history, architecture, archeology, engineering, and culture. These contribute to an understanding of the historical and cultural foundations of the nation.

The National Register includes:

- All prehistoric and historic units of the National Park System;
- National Historic Landmarks, which are properties recognized by the Secretary of the Interior as possessing national significance; and
- Properties significant in American, state, or local prehistory and history that have been nominated by State Historic Preservation Officers, federal agencies, and others, and have been approved for listing by the National Park Service.

TANK REMOVAL REPORT

RMC Lonestar Plant 207
1026 Bransten Road
San Carlos, California

Prepared by:

HK2, Inc./SEMCO
70 Chemical Way
Redwood City, California 94063
(650) 261-1968 Phone
(650) 261-0735 Fax

Project No. 98-0161

November 1998

INTRODUCTION

RMC Lonestar contracted HK2, Inc./SEMCO to remove one 6,000 gallon underground diesel storage tank (UST) from their facility at 1026 Bransten Road in San Carlos, California. The site location is shown in Figure 1. Figure 2 is a site plan and Figure 3 is a detail map of the UST area. Regulatory permits are in Appendix A.

FIELD ACTIVITIES

On August 28, 1998, HK2 removed the fuel dispenser and concrete above the UST, excavated and stockpiled the soil surrounding the tank, removed product piping, and pumped approximately 10 gallons of residual product from the tank into a 55 gallon storage drum. HK2 then rinsed the interior of the tank with a high-pressure hot water detergent and pumped the rinse water (approximately 25 gallons) into the storage drum.

On August 29, 1998, HK2 added dry ice to the tank and directed Bay Crane, Inc. to remove the UST under the supervision of Ms. Sandra Estrin of the San Mateo County Health Services Agency (SMCHSA) and Mr. Mike Leong of the South County Fire Department. A copy of Ms. Estrin's Inspection Form and the UST Unauthorized Release Report is in Appendix A.

HK2 sampled the groundwater entering the excavation and collected two soil samples from the excavation and four samples from the soil stockpile. The samples from the excavation were collected adjacent to each end of the UST at approximately 6.5 feet below grade (fbg). The location of these samples is shown in Figure 3. The samples were labeled, placed in an iced cooler, and submitted under chain of custody to the state-certified North State Environmental (NSE) laboratory. NSE composited the soil stockpile samples and analyzed the composite sample and the excavation soil samples for total petroleum hydrocarbons (TPH) as diesel (TPH-D; EPA Methods 3550/Modified 8015) and benzene, toluene, ethylbenzene, and total xylenes (BTEX; EPA Method 8020). The stockpile composite sample was additionally analyzed for reactivity, corrosivity, and ignitability (RCI; EPA SW846). NSE analyzed the groundwater sample for TPH-D (EPA Methods 3510/Modified 8015) and BTEX. Tables 1 and 2 summarize the laboratory results of these analyses. The laboratory report and chain of custody record is in Appendix B.

HK2 backfilled the excavation up to approximately 1.5 fbg with imported crushed rock. The balance of the excavation was backfilled with imported silty, gravelly sand on August 31, 1998. The concrete surface will be replaced in November 1998.

WASTE DISPOSAL

The tank and product piping were transported by Ecology Control Industries to the Erickson disposal facility in Richmond, California. On October 1, 1998, Touchatt Trucking transported the soil stockpile to the Vasco Road Sanitary Landfill in Livermore, California. Clearwater Environmental Management transported the drum of liquid waste to the Alviso Independent Oil facility in Alviso, California on October 23, 1998. A copy of the waste manifests and certificate of tank destruction is in Appendix B.

FINDINGS

- No holes were observed in the product piping or in the UST which was a single-walled steel tank with a capacity of 6,000 gallons.
- The texture of the native soil beneath the tank was sand. Discolored soil was observed on the sidewalls of the excavation.
- Depth to groundwater in the excavation following UST removal was approximately 6.5 fbg. A sheen of product was observed on the surface of the groundwater.
- The soil sample collected from the north sidewall of the excavation contained 10 mg/kg TPH-D and 0.007 mg/kg benzene. The TPH-D and BTEX concentrations in the sample collected from the south sidewall were below the laboratory reporting limits (1.0 mg/kg for TPH-D and ≤ 0.01 mg/kg for BTEX).
- The soil stockpile composite sample contained 82 mg/kg TPH-D. The benzene concentration in this sample was below the laboratory reporting limit (0.02 mg/kg). The RCI results for this sample indicate the soil stockpile is non-hazardous with respect to these characteristics.
- The groundwater sample collected from the tank excavation contained ~~11.20~~ 20 mg/l TPH-D. The benzene concentration in this sample was below the laboratory reporting limit (0.0005 mg/l).

CONCLUSION

Soil and groundwater in the vicinity of the former UST have been affected by diesel range hydrocarbons based on the laboratory results of soil and groundwater sample analysis. The lateral and vertical extent of these hydrocarbons has not been assessed.

**APPLICATION FOR PERMIT TO CLOSE UNDERGROUND
HAZARDOUS MATERIAL STORAGE TANK
VALID FOR 90 DAYS AFTER APPROVED**

1. Facility Information

Name of Facility <i>RMC Lonestar</i>	Type of Business	
Street Address <i>1026 Granter Road</i>	City <i>San Carlos</i>	Zip Code
Contact Person <i>Bradd Statley</i>	Title	Telephone <i>510 426-2279</i>
Owner Name (Corporation, Agency, or Individual) <i>RMC Lonestar</i>		Telephone <i>510 426-2279</i>
Street Address <i>PO Box 5252</i>	City <i>Pleasanton</i>	Zip Code <i>94566</i>
Generator EPA ID # <i>CAL 000 043 203</i>		

2. Contractor Removing Tank

Company Name and State License # <i>HK2, Inc. / SEMCO 719103</i>	Contact Person <i>Chuck Kiper</i>	Telephone <i>650 261-1968</i>
Street Address <i>70 Chemical Way</i>	City <i>Redwood City</i>	Zip Code <i>94063</i>

3. Soil/Water Analysis Laboratory and Sampler

Company Name (LAB), State Certified # <i>No. State Environmental #1753</i>	Contact Person <i>John Murphy</i>	Telephone <i>650 588-2838</i>
Street Address <i>90 So. Spruce St.</i>	City <i>San Francisco</i>	Zip Code <i>94080</i>
Company Name (SAMPLER) <i>HK2, Inc. / SEMCO</i>	Contact Person <i>Chuck Kiper</i>	Telephone <i>261-1968</i>
Street Address <i>70 Chemical Way</i>	City <i>Redwood City</i>	Zip Code <i>94063</i>

4. Hazardous Waste Hauler (Tank and/or Rinsate)

Company Name <i>RHT</i>	Contact Person <i>Scott Miller</i>	Telephone <i>209 578-4100</i>
Street Address <i>1336 Pauline Avenue</i>	City <i>Modesto</i>	Zip Code <i>95358</i>

1. Will tank(s) be cleaned on site? (yes or no) _____.

If "yes", the effluent is classified as a hazardous waste and must be transported by a registered hazardous waste hauler to a licensed treatment, storage, or disposal (TSD) Facility. Transporter EPA ID # Cleanwater CAR 000 007 013

Please explain cleaning procedure (refer to item 8 on page 4). High pressure hot water detergent wash, 20k psi, 1000 gallon capacity, sponge w/air

If "no", the tank is classified as a hazardous waste and must be transported by a registered hazardous waste hauler to a licensed treatment, storage, and disposal (TSD) Facility. Transporter EPA ID # _____

Destination of Tank(s) <u>ECT</u>			
Company Name, EPA ID # <u>ECT CAD009466392</u>		Contact Person <u>Karen Ruffin</u>	Telephone <u>910 235-1393</u>
Street Address <u>255 Para Blvd.</u>		City <u>Richmond</u>	Zip Code <u>94801</u>

6. Tank Identification & Construction

Tank # <u>UNK</u>	Year Tank Installed <u>UNK</u>	Volume of Tank (Gallons) <u>6,000</u>	☐ Cathodic Protection?
☒ Single-wall or ☐ Double-wall? Primary Containment - ☒ Steel ☐ Fiberglass ☐ Concrete ☐ Other? _____			

7. Chemical Composition of Materials Currently or Previously Stored in Tank.

☐ Unleaded	☐ Super Unleaded	☐ Regular	☐ Premium	☒ Diesel	☐ Waste Oil
☐ Other? _____					

8. Reason for Removal

☐ Tank leak	☐ System Upgrade	☒ Discontinued use	☐ Other? _____

9. Certification by Applicant

I hereby certify that I have read and will follow the "Procedure for the Removal of Underground Storage Tanks" printed on the attached page.

10. Name of Applicant (Owner or Owner's Representative)

Signature R. P. Ruffin agent for Owner Date 7/13/98

11. Approved Permit # _____ Returned for Correction _____

Inspector _____ Date _____

**PROCEDURE FOR THE REMOVAL
OF UNDERGROUND STORAGE TANKS**

Complete the "Application for Permit to Close Underground Hazardous Materials Storage Tank" (pages 1&2). Please complete one application per tank.

Contact the Local Fire and Building Agency for their policy regarding closure of underground storage tanks.

Submit the completed application, designated fee, written workmen's compensation insurance verification and plot plan drawing to the San Mateo County Environmental Health Services Division. The drawing should consist of an aerial view of the facility at which the tank(s) are located and should include the following information:

- a. Scale
- b. North arrow
- c. Property line
- d. Location of structures near the tank(s)
- e. Location of relevant existing equipment, including the tank(s) to be removed, associated piping, and fuel dispensers.
- f. Area roadways

Also, submit State Water resources Control Board Part A form for the facility, and Part B form for each tank closed. These forms are available from the Environmental Health Services Division.

In order to determine the extent of any contamination, soil and/or water samples must be taken from the excavation pit after the tank(s) are removed. Soil samples must also be taken every twenty (20) feet along piping runs at the interface of backfill material and native soil. Soil samples will be required to be taken from the excavation spoils pile (approximately one discrete sample per 20 cubic yards). The samples must be collected by a qualified, independent third party. All samples shall be protected against contamination and/or degradation during their collection, transport, and analysis. A written analysis report, including chain of custody documentation, and sample location map with measurements including depth, must be submitted to the Environmental Health Services Division within twenty (20) working days following removal of the tank(s). This report is subject to review and must be approved in order to be recognized as valid.

A groundwater investigation will be required if any of the following conditions exist or if a representative of the Environmental Health Services Division deems one necessary to assure that the public health and safety is protected:

- a. Soil contamination concentrations exceeding 100 ppm total petroleum hydrocarbons (TPH) or total oil and grease (TOG) within two feet of native soil beneath the tank.
- b. Detectable concentrations of petroleum hydrocarbon are found in soil at or below the seasonable high groundwater level.
- c. Detectable levels of any petroleum hydrocarbon in soil below the tank and the soil contains layers of sand, gravel and/or other high permeability material.
- d. Ground water in excavation pit has detectable levels of any petroleum hydrocarbon. (Pit may be pumped and allowed to recharge).
- e. Site has history of leaks or tanks are in poor condition upon removal.

6. It must be demonstrated to a representative of the Environmental Health Services Division that residual product and any associated waste (i.e. sludge) have been removed from the interior of the tank(s) prior to purging. Documentation of proper disposal of residual product and associated waste using an Uniform Hazardous Waste Manifest (UHW) must be submitted to the Environmental Health Services Division within twenty (20) working days following removal of the tank(s).
7. It must be demonstrated to a representative of the Environmental Health Services Division that tank(s) have been adequately pruged and that no explosive hazard exists at the time of tank(s) removal i.e. 10% of lower Explosive Limit (% LEL) or 5% oxygen.
8. Underground tank(s) and associated piping removed from excavations must be shipped under UHW to a permitted treatment, storage and disposal (TSD) facility or Class I landfill. Underground tanks may be cleaned using a high-pressure washer to reduce the % LEL. This process does not render these tank(s) non-hazardous and these tank(s) must be hauled under a hazardous waste manifest. Only tank(s) cleaned by a State Department of Health Services (DOHS) permitted tank cleaner may be disposed of as non-hazardous waste. Copies of all UHW must be submitted to the Environmental Health Services Division within twenty (20) working days following removal of the tank(s).
9. Any piping associated with the tank(s) which is to remain underground must be flushed of all residual product and capped or sealed to the satisfaction of the Environmental Health Services Division.
10. Transported tanks must have all opening sealed, except for opening atop the tank fitted for ventilation with "T" or other device which will preclude rain entering a stored tank.
11. The Environmental Health Services Division must be notified a minimum of seven days(7) prior to commencement of work to schedule an inspection. Please note that the inspection must be confirmed with the district inspector. A representative of this office must be present at the time of removal.
12. An additional hourly fee will be charged for inspection time exceeding three hours.
13. Site safety plan must be available for review at job site.

THE ABOVE ARE GENERAL PROCEDURES-MODIFICATIONS MAY BE NECESSARY IN CERTAIN CASES. IF YOU HAVE ANY QUESTIONS, OR OTHERWISE NEED ASSISTANCE, PLEASE CALL THE SAN MATEO COUNTY ENVIRONMENTAL HEALTH SERVICES DIVISION AT (415) 363-4305.

I hereby certify that I have read and will follow the "Procedures for the Removal of Underground Storage Tanks"

TEST METHOD VISUAL GASTECH/1314 SMPN LAST PRODUCT DIESEL

This is to certify that I have personally determined that this tank is in accordance with the American Petroleum Institute and have found the condition to be in accordance with its assigned designation: This certificate is based on conditions existing at the time the inspection herein set forth was completed and is issued subject to compliance with all qualifications and instructions.

TANK SIZE 6,000 GALLON TANK CONDITION SAFE FOR FIRE

REMARKS: OXYGEN 20.9% LOWER EXPLOSIVE LIMIT LESS THAN 0.1% ERICKSON, INC. HERBY CERTIFIES THAT THE
ABOVE NUMBERED TANK HAS BEEN CUT OPEN, PROCESSED, AND THEREFORE DESTROYED AT OUR
PERMITTED HAZARDOUS WASTE FACILITY.
ERICKSON, INC. HAS THE APROPRIATE PERMITS FOR, AND HAS ACCEPTED THE TANK SHIPPED TO US
FOR PROCESSING.

In the event of any physical or atmospheric changes affecting the gas-free conditions of the above tanks, or if in any doubt, immediately stop all hot work and contact the undersigned. This permit is valid for 24 hours if no physical or atmospheric changes occur.

STANDARD SAFETY DESIGNATION

SAFE FOR MEN: Means that in the compartment or space so designated (a) The oxygen content of the atmosphere is at least 19.5 percent by volume; and that (b) Toxic materials in the atmosphere are within permissible concentrations; and (c) In the judgment of the Inspector, the residues are not capable of producing toxic materials under existing atmospheric conditions while maintained as directed on the Inspector's certificate.

SAFE FOR FIRE: Means that in the compartment so designated (a) The concentration of flammable materials in the atmosphere is below 10 percent of the lower explosive limit; and that (b) In the judgment of the Inspector, the residues are not capable of producing a higher concentration than permitted under existing atmospheric conditions in the presence of fire and while maintained as directed on the Inspector's certificate, and further, (c) All adjacent spaces have either been cleaned sufficiently to prevent the spread of fire, are satisfactorily inerted, or in the case of fuel tanks, have been treated as deemed necessary by the Inspector.

The undersigned representative acknowledges receipt of this certificate and understands the conditions and limitations under which it was issued.

Subsurface Investigation

**1026 Bransten Road
San Carlos, California**

I. EXECUTIVE SUMMARY

AllWest completed a subsurface investigation program at a former diesel underground storage tank (UST) site at the RMC Lonestar facility located at 1026 Bransten Road, San Carlos, California between June and August, 1999. The program included the advancement of five Geoprobe borings for soil and groundwater samples, the installation of temporary piezometers in the borings for groundwater flow direction calculation, the installation of a two-inch diameter groundwater monitoring well at a down-gradient location of the former UST, the development and sampling of the newly constructed well, and the chemical analyses of selected soil and all groundwater samples. The purpose of this subsurface investigation program was to comply with the requirements of San Mateo County Environmental Health Services Division (SMCEHSD) for investigating and monitoring the shallow groundwater quality at this former diesel UST site.

A workplan outlining the investigation process was prepared and submitted to SMCEHSD in June 1999. Subsequent to agency approval of the workplan, five Geoprobe borings (P-1 through P-5) were advanced around the former UST site to collect soil and groundwater samples, and to install temporary piezometers in July 1999. Casing elevations and groundwater depth measurements taken from the temporary piezometers indicate the site-specific groundwater flow direction was to the east-southeast. Based on this, one groundwater monitoring well (MW-1) was installed east (down-gradient) of the former diesel UST site in August 1999. The well was developed and sampled in late August 1999 according to standard well development and sampling procedures.

One groundwater sample and two soil samples from each Geoprobe boring were selected for chemical analyses in a state certified laboratory. The analyses included diesel range hydrocarbons (TPH-d), fuel related volatile compounds (BTEX), and a fuel oxygenate (MTBE). In addition, one soil and one groundwater sample from the monitoring well were also analyzed for the same target contaminants. The analytical results indicate BTEX and MTBE were not detected in the tested samples except for two groundwater samples. TPH-d were detected in five soil and all six groundwater samples. The benzene and toluene concentrations in one groundwater sample exceeded the maximum contaminant levels (MCL) for drinking water. TPH-d concentrations detected in soil samples all significantly below the traditional soil cleanup level of 100 ppm. There is no MCL established for TPH-d.

The data gathered during this investigation indicates that no significant residual soil contamination remain in the vicinity of the former UST site. The elevated concentrations of TPH-d and BTEX in one groundwater sample adjacent to the former UST site indicate a dissolved phase plume at the site. Since the contaminant concentrations decreased substantially in short distances (generally less than 10 feet) away from this sampling point, the lateral extent of the plume appeared to be limited.

Considering that TPH-d and BTEX contaminants are bio-degradable and that the extent of the groundwater plume appeared to be limited, monitored natural attenuation (MNA) is the most cost efficient action for the subject site. AllWest recommends periodic (quarterly) monitoring of the site groundwater quality through the newly installed monitoring well to document the natural degradation and attenuation process. AllWest also recommends that a copy of this report be submitted to SMCEHSD to fulfill agency reporting requirements.

II. INTRODUCTION

This report presents the results of a subsurface investigation program conducted at the former diesel UST site located at 1026 Bransten Road, in San Carlos, California. Included in this report is an abbreviated site history, a description of field activities, a summary of analytical results, our interpretation of the data, and a recommended course of action. Supporting information such as site figures, sampling logs, and laboratory reports are included as appendices.

A. Site Background

The subject property lies in an industrial area in the eastern part of San Carlos, California. The facility is located on the north side of Bransten Road, between El Camino Real (Highway 82) and Bay Shore Freeway (Highway 101). The property is currently a RMC Lonestar concrete mixing plant. A site location map and a generalized site plan are presented in Figures 1 and 2. Available geologic literature indicate the subject site is underlain by layers of sandy clay and silty sand. The anticipated groundwater depth is 6 to 8 feet below the ground surface.

According to documents provided to AllWest by RMC Lonestar, a 6,000-gallon diesel UST was removed from the subject property on August 29, 1998. The verification soil and groundwater samples collected from the tank excavation detected the presence of diesel range hydrocarbons (TPH-d) at 82 mg/kg and 120 mg/l, respectively. On January 24, 1999, the San Mateo County Environmental Health Services Division (SMCEHSD) directed RMC Lonestar to submit a workplan to investigate the extent of subsurface contamination at the former tank site. Consequently, RMC Lonestar submitted a workplan to the SMCEHSD on March 31, 1999.

On April 23, 1999, after reviewing the workplan, SMCEHSD requested that RMC Lonestar to revise the workplan to include the following elements: install five direct push borings along the perimeter and within 10 feet of the former tank excavation for soil and groundwater sampling; install temporary casings in the boring to determine groundwater flow direction and gradient; and install one permanent well in the source area (former tank site) and another well in the verified down-gradient location for groundwater monitoring. Since RMC Lonestar plans to install an above ground fuel tank at the source area, the SMCEHSD required permanent monitoring well within the former tank pit will be inaccessible for future sampling. Therefore, only the down-gradient monitoring well was planned by RMC Lonestar.

B. Purpose and Scope of Work

The purpose of this groundwater monitoring well installation and sampling program was to comply with the requirements of SMCEHSD for monitoring the shallow groundwater quality at the former UST site.

The scope of work, as defined by a June 14, 1999 workplan prepared by AllWest and approved by SMCEHSD, included the following tasks:

1. Prepare a workplan according to SMCEHSD requirements that outlined sampling strategies, analytical methods, and QA/QC protocols. Submit the workplan to SMCEHSD for agency approval. Obtain a drilling permit from SMCEHSD and scheduled agency inspection. Arrange for underground utility clearing;
2. Retain a licensed well driller to advance five Geoprobe borings into the first groundwater table around the former UST site. Collect soil and groundwater samples from the Geoprobe borings for chemical analyses. Install temporary piezometers in the borings to determine groundwater flow direction. Advance one auger boring in the verified down-gradient direction of the former UST. Install a two-inch diameter groundwater monitoring well in the auger boring. Develop and sample the newly installed well;
3. Submit the collected soil and groundwater samples to a state certified laboratory for chemical analyses to detect the presence of total petroleum hydrocarbons in the diesel range (TPH-d) by modified EPA method 8015, fuel related volatile organic compounds benzene, toluene, ethylbenzene, and xylene (BTEX) by EPA method 8020, and fuel oxygenate methyl tert-butyl ether (MTBE) by EPA method 8020; and
4. Prepare this written report to describe the field investigation, summarize the analytical results and field measurements, and provide recommendations as appropriate.

III. PROJECT INITIATION

A. Workplan Preparation

A written workplan that outlined the sampling strategy, locations, and procedures, and described the analytical methods, the quality control protocols, and the project schedule was prepared by AllWest and submitted to SMCEHSD for review on June 14, 1999. The work plan included all the investigation elements required by SMCEHSD with one revision, i.e. only one down-gradient groundwater monitoring well. An approval to proceed with the workplan was received from Mr. Paresh Khatri of SMCEHSD on June 21, 1999 with the addition of MTBE analysis to all the samples to be analyzed during this investigation program.

B. Well Permit Application

After SMCEHSD approved the work plan, AllWest prepared and submitted a well permit application to SMCEHSD on June 24, 1999, for the proposed five Geoprobe borings and one groundwater monitoring well. SMCEHSD approved the permit application on July 6, 1999. A copy of the drilling permit is included as Appendix A in the APPENDICES section of this report. As per the permit requirements, SMCEHSD was notified of all planned dates of field activities in advance to allow agency inspection.

IV. FIELD ACTIVITIES

A. Underground Utility Clearing

To avoid damaging the underground utilities during the course of subsurface investigation, AllWest contacted Underground Service Alert (USA), an organization for public utility information, on July 16, 1999 of the pending subsurface investigation. USA then notified each of the public and private entities that maintained underground utilities at the site to locate and mark their installations for field identification. An USA notification number 529902 was assigned to the project.

In addition to notifying USA, a private underground utility locator, California Utility Survey (CUS) of San Ramon, California, was also retained by AllWest to conduct a magnetometer sweep of the proposed sampling area to detect undocumented underground utilities. CUS conducted the underground utility sweep on July 8, 1999. An AllWest engineer was also present to identify proposed sampling points. The final proposed sampling location was cleared of known underground utilities.

B. Geoprobe Soil Sampling

A total of five Geoprobe borings, numbered P-1 through P-5, were advanced during this investigation. The borings were located along the east, south, and west perimeters of the former diesel UST and within 10 feet of the UST site. The north end of the former UST site is inaccessible due to the existing cement silo and no boring was advanced in that direction. The locations of all Geoprobe borings are graphically depicted on Figure 2.

The Geoprobe soil sampling process involves the driving into the subsurface a decontaminated four-foot Geoprobe Macro soil sampler connected to 4-foot Geoprobe extension rods. The sampler is an 2-inch outside-diameter (O.D.) stainless steel pipe that can accommodate a 4-foot long acetate soil liner to retain subsurface soils. The sampler is open at the bottom end to allow a continuous soil core to enter into the sample liner and be contained by the liner.

The entire sampling assembly, the sampler and the steel extension rods, is driven into the subsurface by a truck-mounted hydraulic percussion hammer. After each 4-foot sampling run, the sampler is retrieved and the sample liner containing the soil core samples is removed. By adding sections of the extension rods, and repeating the driving process, soil cores are generated from the desired depths.

Geoprobe boring advancement was performed by Bay Area Exploration of Cordelia, California, a drilling contractor with a current C-57 license on July 29, 1999. During the drilling operation, a field engineer from AllWest was present to collect samples and maintain boring logs. Mr. Khatri of SMCEHSD was also onsite to inspect the drilling process. The boring logs containing all pertinent information on drilling and soil conditions. A copy of the field boring logs, the boring log legends, and the Unified Soil Classification System (USCS) is included in Appendix B.

At each sampling interval, a decontaminated sampler and new sample liners were used to avoid cross contamination. The soils contained in the sample liners were classified according to the Uniform Soil Classification System and recorded on the soil boring logs. Each sample liner section selected for laboratory analyses were sealed with Teflon sheets, plastic end caps, and silicon tape. The sealed sample liner was labeled and placed in an ice chest cooled to 4°C with crushed ice for temporary field storage and transportation. The standard chain-of-custody protocol was maintained for all soil samples from the time of collection to arrival at the laboratory.

All borings were extended into the groundwater table and terminate at approximately 12 feet below the ground surface. A total of 15 soil samples, three from each boring, were collected during this investigation. The borings were backfilled with neat cement grout on August 3, 1999, after the completion of groundwater sampling and groundwater depth/elevation measurements.

C. Geoprobe Groundwater Sampling

After the completion of Geoprobe soil sampling, a temporary well casing was installed in each of the Geoprobe boring. The temporary well casing consisted of 1-inch diameter schedule-40 PVC casing with factory-perforated slots. The perforation allowed groundwater to accumulate inside the well casing for sampling. To collect a groundwater sample through the well casing, a 0.75-inch diameter and 2-foot long decontaminated stainless steel bailer was lowered into the casing to bring the accumulated groundwater to the ground surface.

After the retrieval of the bailer, groundwater samples contained in the bailer was decanted into laboratory provided containers. The containers were then sealed with Teflon coated caps with no headspace, labeled, and placed in an ice chest for field storage and transportation to a state certified analytical laboratory. The standard chain-of-custody protocols were followed from sample collection to delivery to the laboratory. The bailer was decontaminated by a detergent wash and a double rinse prior to each groundwater sampling to avoid cross contamination. A total of five Geoprobe groundwater samples, one sample from each Geoprobe boring, were collected during this investigation.

D. Groundwater Elevation Measurement

After the completion of Geoprobe groundwater sampling, the well casings were left in-place to act as temporary piezometers to allow the measurement of depth to groundwater table and the determination of groundwater flow direction. Groundwater level measurement was conducted on August 2, 1999, more than 72 hours after casing installation to allow stabilization of the groundwater table. The depth to groundwater table was measured with an electric sounder to the nearest one-one hundredth of a foot. The elevation of each temporary well casing was surveyed with an optical level to the nearest one-one hundredth of a foot base on an assumed datum of +100 feet at the instrument height. Groundwater gradient and flow direction were calculated based on groundwater depth and casing elevation measurements. A summary of the groundwater elevation measurement is presented on Table 1 in the TABLES section of this report.

Based on the results of groundwater elevation measurement, the site-specific groundwater flow direction during this investigation was determined in the east-southeast direction. The temporary well casings was removed and the borings backfilled by Bay Area Exploration after the completion of the down-gradient groundwater monitoring well on August 3, 1999.

E. Groundwater Monitoring Well Installation and Development

One groundwater monitoring wells was installed on August 3, 1999, after the completion of groundwater elevation measurements. The well installation was also performed by Bay Area Exploration. The groundwater monitoring well was installed inside a soil boring advanced by a CME-75 truck-mounted drilling rig with 8-inch O.D. continuous flight hollow-stem augers. As required by SMCEHSD, the well was located in the verified down-gradient (east) direction of the

former UST site. However, due to the physical limitations of the site (utility lines and access road) the well was located approximately 13 feet from the former UST pit, slightly exceeding the 10 feet requirement by SMCEHSD. This condition was verbally transmitted to Mr. Khatri of SMCEHSD on August 4, 1999. The well location is graphically depicted on Figure 2 of this report.

During the boring advancement, a field engineer from AllWest was present to collect soil samples, to conduct field screening, and to maintain a log of the drilling activities. A copy of the well boring log is also included in Appendix B. Three soil samples were collected from the boring at intervals of 5 feet using a modified California sampler. The soil samples were field screened for classification purposes and then preserved for possible chemical analyses in the same manner as Geoprobe soil sampling. The soil boring was terminated at 15 feet below the ground surface (BGS).

After the soil boring advancement was complete, the well casing was lowered into the borehole through the center of the hollow stem augers. The augers were then removed one section at a time while the filter pack was being placed around the well casing. The well casing was constructed to a depth of 15 feet BGS. Well casing was composed of 2-inch diameter, schedule-40, PVC pipes. The screen section of the casing had factory-slotted 0.02-inch perforations and extended from a depth of 5 feet BGS to 15 feet BGS. The blank (non-perforated) section was then added to the screen section to complete the well casing to a few inches BGS.

Pre-washed #3 Monterey sands were placed around the screen section of the well casing to form a filter pack. The filter pack was placed from the bottom of the well up to one half foot above the screen section. A one-foot bentonite seal was then placed above the filter pack to prevent surface water infiltration. The remaining length of the annular space in the borehole was backfilled with neat cement grout up to a foot below the ground surface. The uppermost foot of the well casing was protected by a traffic-rated well vault set in concrete. A water-tight locking end-cap was placed on top of the well casing to prevent surface water intrusion and unauthorized access. Soil cuttings generated during the well installation were contained on a concrete slab, covered with plastic sheeting, and stored onsite for future disposal.

The well was developed on August 9, 1999, after sufficient time (generally more than 72 hours) had passed after well installation to allow proper curing of the well material. Well development was accomplished by repeated bailing and surging. Well development was considered completed when the physical properties (temperature, pH, conductivity) of the groundwater were stabilized (consecutive readings within 10% of each other) and the pumped groundwater was relatively sediment free. Approximately 35 gallons of groundwater, equivalent to 14 well volumes, were removed from the well during the well development. Groundwater generated from the well development process was contained in a Department of Transportation (DOT) approved 55-gallon steel drum. The drum was stored on-site for future disposal.

F. Groundwater Sampling

A representative groundwater sample was collected by AllWest from the groundwater monitoring well on August 25, 1999, after proper well purging. Prior to well purging, an electric water level sounder was lowered into the well casing to measure the depth to the water to the nearest 0.01 feet. A clear poly bailer was then lowered into the well casing and partially submerged. Upon retrieval of the clear bailer, the surface of the water column retained in the bailer was examined for any floating product or product sheen. No floating product or visible product sheen was observed on the surface of water retained in the bailer. However, a slight hydrocarbon odor from the retained groundwater was noted.

After initial measurements were completed and recorded, the well was purged by a disposal bailer. Approximately 3 well volumes of groundwater was purged. During the purging process, the groundwater physical property indicators (temperature, pH, and conductivity) were monitored periodically with a combination meter. Purging was considered complete when indicators were stabilized (consecutive readings within 10% of each other) and the purged water was free of sediments.

Groundwater sampling was conducted after the water level recovered to at least 80% of the initial level, recorded prior to purging. The groundwater sample was collected by using a disposable bailer that was discarded after the sampling event to avoid cross-contamination. Upon retrieval of the disposable bailer, the retained water was carefully transferred to appropriate pre-cleaned glassware furnished by the analytical laboratory. A special adapter fitted to the bottom end of the bailer was used to minimize the loss of volatile organics during transfer. All sample containers were fitted with a Teflon lined septum/cap and filled such that no headspace was present. After the water sample was properly transferred to the appropriate container, the container was labeled and immediately placed on ice to preserve its chemical characteristics. A well sampling log was maintained during the sampling event and a copy of the log is included in Appendix B.

Samples were field stored and transported in an insulated cooler filled with crushed ice. After the samples arrived at AllWest's office, they were rechecked and then placed in a refrigerator awaiting transportation to the analytical laboratory. The samples were delivered to the analytical laboratory by a courier of the laboratory. All samples were transported to the laboratory under proper chain of custody documentation from the time of collection to the time of arrival at the laboratory.

To avoid cross-contamination, all groundwater sampling equipment that came in contact with the groundwater was thoroughly cleansed by washing it in Alconox (a non-phosphor detergent) solution and rinsed with distilled water prior to each well sampling event. Sample collection was by a disposable bailer which was discarded after each well sampling event. The purged water was temporarily stored on-site in a labeled DOT-approved 55-gallon steel drum awaiting test results to determine the proper disposal method.

V. INVESTIGATION FINDINGS

A. Subsurface Conditions

Subsurface soils encountered within the soil borings generally consisted of a very dark brown sandy silty clay to approximately 4 feet below ground surface (BGS). The clayey soil then graded into grayish brown to olive brown clayey sand to depths between 10 and 12 feet BGS. Underlying the clayey sand was a light brown to yellowish brown sandy and gravelly strata that extended to the maximum drilled depth of 15 feet BGS.

Free groundwater was first encountered within the soil borings at approximately 7 to 8 feet BGS. Groundwater level stabilized at approximately 4.5 to 5 feet BGS during elevation measurement and well sampling. Groundwater flow direction, based on elevation measurements during this investigation, was toward the east-southeast.

B. Laboratory Analyses

The collected soil and groundwater samples were forwarded to Chromalab of Pleasanton, California, a state certified analytical laboratory, for chemical analyses. Analyses performed on selected soil samples and all groundwater samples included total petroleum hydrocarbons in the diesel range (TPH-d) by gas chromatography (modified EPA method 8015), fuel related volatile organic compounds: benzene, toluene, ethylbenzene, and xylenes (BTEX) by gas chromatography (EPA method 8020), and the fuel oxygenate methyl tert-butyl ether (MTBE) also by EPA method 8020.

Analytical results indicate no BTEX or MTBE were detected in any of the soil samples. Low levels of TPH-d, between 1.2 mg/kg (equivalent to 1.2 parts per million [ppm]) and 7.4 ppm, were detected in five of the 11 tested soil samples. No BTEX or MTBE were detected in the groundwater samples except for low levels of benzene, toluene, and xylene, between 1.4 µg/L (equivalents to 1.4 parts per billion [ppb]) and 530 ppb. TPH-d were detected in all groundwater samples at concentrations between 74 and 250,000 ppb.

A review of laboratory internal quality assurance/quality control (QA/QC) report indicates the method blank and sample spike data are within the laboratory recovery limits. The laboratory QA/QC report indicated that the samples were analyzed within the acceptable EPA holding time. Based on the laboratory QA/QC report, the data from Chromalab are considered to be of good quality. A copy of the laboratory analytical reports and chain-of-custody records are presented in Appendix C of this report.

C. Discussion of Findings

The analytical data indicates that no detectable concentrations of BTEX or MTBE in any of the tested soil samples. Furthermore, TPH-d was detected only in five out of 11 tested soil samples and

in low concentrations, between 1.4 and 7.2 ppm. Considering that the typical soil clean-up level for diesel is 100 ppm and all Geoprobe borings were located within 10 feet of the former tank pit, this soil result indicates that no significant residual soil contamination remain at the former UST site and no further soil remedial action is necessary.

The elevated TPH-d and BTEX concentrations detected in groundwater sample P-2-W indicate a dissolved phase groundwater contamination plume at the former UST site. Based on the rapid decrease of contaminant concentrations in other sampling points at a short distance (generally less than 10 feet) away from this sampling location, the lateral extent of the groundwater plume appears to be limited. Although the vertical extent of the plume cannot be assessed based on single groundwater depth data at each sampling location, petroleum product and its dissolved components generally float at the top of groundwater table with limited vertical extent. Therefore, the groundwater sampling results suggest a small groundwater plume centered near the southeast corner of the former UST site.

There is no general clean-up level established for TPH-d in groundwater and most of the groundwater remediation sites were reviewed by the agencies in a case by case basis. Although the TPH-d concentrations detected in P-2-W (250,000 ppb) are considered elevated, the contaminant concentrations decrease rapidly with distance away from the center of the plume. Therefore, the total mass contained in the plume is relatively small.

Similar to TPH-d, the BTEX concentrations in the groundwater samples were only considered elevated in sample P-2-W. Furthermore, only benzene and toluene concentrations in P-2-W exceeded their respective MCL of 1 ppb and 150 ppb. Again, the rapid decrease of BTEX concentrations with distance away from P-2-W indicates the limited lateral extent of the plume and the smaller contaminant mass contained within the plume.

The appropriate course of action for this former diesel UST site is to demonstrate the occurrence of biodegradation and/or natural attenuation of the target contaminants by conducting periodic monitoring of the site groundwater quality through the newly installed groundwater monitoring well. This is based on the following rationales: 1) no significant source area (impacted soil) remains at the site, 2) the areal extent of the plume is limited (approximately 30 feet in diameter), 3) TPH-d and BTEX naturally bio-degradable, 4) the plume is entirely contained within the site boundary with low potential to migrate off the site (nearest property line is more than 50 feet away), 5) the near surface site soils are relatively clayey that generally impeded contaminant migration, 6) the site and adjacent properties are all in industrial use with no sensitive receptors, and 7) there is no planned site usage change or beneficial use of site shallow groundwater in the near future.

VI. CONCLUSIONS AND RECOMMENDATIONS

The results of this subsurface investigation indicate no significant residual soil contaminants exist in the vicinity of the former diesel UST site. Although a dissolved phase diesel groundwater contamination plume was found to exist at the former diesel tank area, the plume appeared to be limited in areal extent and contained relatively smaller mass of the contaminants. Monitored natural attenuation is considered the most cost effective action for this groundwater contamination plume.

AllWest recommends periodic (quarterly) monitoring of the site groundwater through the newly installed groundwater monitoring well to document the occurrence of biodegradation and/or natural attenuation. AllWest also recommends that a copy of this report be submitted to the San Mateo County Environmental Health Services Division to fulfill the agency reporting requirements.

VII. REPORT LIMITATIONS

The work described in this report is performed in accordance with the Environmental Consulting Agreement between RMC Lonestar and AllWest Environmental, dated May 12, 1999. AllWest has prepared this report for the exclusive use of RMC Lonestar for this particular project and in accordance with generally accepted practices at the time of the work. No other warranties, certifications or representation, either expressed or implied are made as to the professional advice offered. The services provided for RMC Lonestar were limited to their specific requirements; the limited scope allows for AllWest to form no more than an opinion of the actual site conditions. No matter how much research and sampling may be performed the only way to know about the actual composition and condition of the subsurface of a site is through excavation.

The conclusions and recommendations contained in this report are made based on observed conditions existing at the site, laboratory test results of the submitted samples, and interpretation of a limited data set. It must be recognized that changes can occur in subsurface conditions due to site use or other reasons. Furthermore, the distribution of chemical concentrations in the subsurface can vary spatially and over time. The results of chemical analysis are valid as of the date and at the sampling location only. AllWest cannot be held accountable for the accuracy of the test data from an independent laboratories nor for any analyte quantities falling below the recognized standard detection limits for the method utilized by the independent laboratories.

Dear Mr. Mullaney:

On behalf of CEMEX, SOMA has prepared the "First Semi-Annum 2013 Groundwater Monitoring Report" for the subject site and it has been uploaded to the State's GeoTracker database for your review.

Thank you for your time in reviewing our report. Please do not hesitate to call me at (925) 734-6400, if you have any questions or comments.

Sincerely,

Mansour Sepehr, Ph.D, PE
Principal Hydrogeologist

1.0 INTRODUCTION

1.1 Overview

SOMA Environmental Engineering, Inc. (SOMA) has prepared this monitoring report on behalf of CEMEX for the ready-mix concrete plant located at 1026 Bransten Road in San Carlos, California (Figure 1).

This report summarizes results of the First Semi-Annum 2013 groundwater monitoring event conducted at the site on May 6, 2013, and includes laboratory analytical results for groundwater samples.

1.2 Field Activities and Laboratory Analysis

1.2.1 Field Activities

On May 6, 2013, SOMA conducted a quarterly groundwater monitoring event in accordance with procedures and guidelines of California Regional Water Quality Control Board (CRWQCB) and San Mateo County Health System (SMCHS) Groundwater Protection Program. Depths to groundwater and additional field parameters including pH, temperature, and electrical conductivity were measured for two wells, MW-1 and MW-1A, and grab groundwater samples were collected from these wells (locations in Figure 2).

Appendix A details groundwater monitoring procedures followed during this monitoring event. Appendix B contains details of measurements of physical and chemical properties of groundwater samples.

1.2.2 Laboratory Analysis

Curtis & Tompkins, Ltd, a state-certified laboratory in Berkeley, California, analyzed groundwater samples for the following: total petroleum hydrocarbons as gasoline (TPH-g) and as diesel (TPH-d); benzene, toluene, ethylbenzene, and total xylenes (collectively termed BTEX).

TPH-g and BTEX, were prepared using EPA Method 5030B and analyzed using EPA Method 8260B. TPH-d was prepared using EPA Method 3520C (Cleanup Method EPA 3630C) and analyzed using EPA Method 8015B.

2. RESULTS

Following are results of field measurements and laboratory analyses for the May 6, 2013 groundwater monitoring event.

2.1 Field Measurements

Table 1 presents depths to groundwater for monitoring wells. Depths to groundwater in MW-1 and MW-1A were 5.00 feet and 4.77 feet, respectively. Groundwater elevations in MW-1 and MW-1A were 7.76 feet and 9.07 feet, respectively. Figure 3 shows groundwater elevations at the site during this monitoring event.

No free/floating product was detected during sampling of groundwater in the two monitoring wells. Groundwater removed during sampling appeared cloudy and brown in color in MW-1 and colorless in MW-1A. No odor or sheen was observed in MW-1 or MW-1A.

Field notes in Appendix B show detailed measurements of physical and chemical parameters of groundwater for each well sampled during this monitoring event.

2.2 Laboratory Analyses

Table 1 presents results of the current quarter groundwater laboratory analyses of TPH-g, TPH-d, and BTEX.

TPH-g was detected in MW-1 at 120 µg/L and below the laboratory-reporting limit in MW-1A. Since the previous monitoring event (August 2012), TPH-g has increased in MW-1.

TPH-d was detected in MW-1 and MW-1A at 200 µg/L and 290 µg/L, respectively. Figure 4 displays the map of TPH-d concentrations in groundwater. Since the previous monitoring event (August 2012), TPH-d has decreased in MW-1 and increased in MW-1A.

Similar to the previous monitoring event (August 2012), BTEX analytes were below laboratory-reporting limits in both wells.

Appendix C contains the laboratory report and chain of custody form for this monitoring event.

3. DISCUSSION OF FINDINGS AND RECOMMENDATIONS

Findings of the First Semi-Annum 2013 groundwater monitoring event are summarized below.

According to the most recent analyses, TPH-g and TPH-d contamination remains at the site. Analytical results show the level of gasoline-range organics in site

groundwater and diesel-range organics to be above, the 100 µg/L Environmental Screening Levels (ESLs). As mentioned before, gasoline-range organics have increased from below laboratory-reporting limit to 120µg/L in western portion of the site around MW-1, since August 2012 and diesel-range organics have increased, from 240µg/L to 290µg/L in MW-1A. However, diesel-range organics have decreased from 300µg/L to 200µg/L in MW-1 since August 2012.

SOMA recommends continued semi-annum sampling of the two groundwater monitoring wells during the Fourth Quarter in 2013 and Second Quarter in 2014, based on the SMCHS directive dated July 13, 2012

SOMA has recently submitted the 'Results of Further Soil and Groundwater Investigation' report dated March 4, 2013. Based on results of the investigation, SOMA recommended installation of one groundwater monitoring well east of the Plant Office building in order to establish groundwater flow direction and two borings between P-2 and the eastern corner of the Plant Office building in order to delineate the groundwater chemical plume.

4. REPORT LIMITATIONS

This report is the summary of work done by SOMA, including observations and descriptions of site conditions. It includes analytical results produced by Curtis & Tompkins, Ltd. for the current groundwater monitoring event. Quantities and locations of wells were selected to provide the required information, but may not be completely representative of entire site conditions. All conclusions and recommendations are based on results of laboratory analysis. Conclusions beyond those specifically stated in this document should not be inferred from this report.

SOMA warrants that services were provided in accordance with generally accepted practices in the environmental engineering and consulting field at the time of this sampling.

El Dorado Hills, California 95762-9608

SUBJECT: CASE CLOSURE, REMEDIAL ACTION OVERSIGHT, CEMEX (formerly RMC LONESTAR) FACILITY LOCATED AT 1026 BRANSTEN, SAN CARLOS, CALIFORNIA

Dear Mr. Aldenhuysen,

This letter confirms the completion of a site investigation and corrective action for the underground storage tank(s) formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tank(s) are greatly appreciated.

Based on information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground storage tank(s) site is in compliance with the requirements of subdivisions (a) and (b) of Section 25296.10 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.3 of the Health and Safety Code and that no further action related to the petroleum release(s) at the site is required.

This notice is issued pursuant to subdivision (g) of Section 25296.10 of the Health and Safety Code.

Claims for reimbursement of corrective action costs submitted to the Underground Storage Tank Cleanup Fund more than 365 days after the date of this letter or issuance or activation of the Fund's Letter of Commitment, whichever occurs later, will not be reimbursed unless one of the following exceptions applies:

- Claims are submitted pursuant to Section 25299.57, subdivision (k) (reopened UST case); or
- Submission within the timeframe was beyond the claimant's reasonable control, ongoing work is required for closure that will result in the submission of claims beyond that time period, or that under the circumstances of the case, it would be unreasonable or inequitable to impose the 365-day time period.

San Carlos, CA 94070

SUBJECT: RESIDUAL CONTAMINANTS AT IMPACTED 1026 BRANSTEN, SAN CARLOS, CALIFORNIA

Dear Ms. Porras and Mr. Valley:

The attached case closure letter was prepared by the San Mateo County Environmental Health Department Groundwater Protection Program (GPP) with the tacit approval of the California Regional Water Quality Control Board (CRWQCB). Although site closure was granted, a small amount of petroleum-affected soil and groundwater may exist near the former aspect of facility (see attached Figure). Although these contaminants do not appear to pose a risk to public health and the environment under existing land use conditions, changes in land use or removal of soil and groundwater from the affected area may create a risk. Therefore, any proposed change in land use or proposed soil or groundwater removal activity at or in close proximity to the subject site must be submitted to the GPP for our review under government code section 65850.2 so we can evaluate whether the residual contaminates will likely pose a risk to public health and the environment if the proposed activities are implemented. The costs to evaluate the potential public health or environmental impacts of the proposed land use or construction activity in relation to the residual contaminants will be billed directly to the entity initiating the activity requiring our review.

Please call me at (650) 372-6295 if you have any questions. Thank you for your cooperation.

Sincerely,

Charles Ice
Hazardous Materials Specialist

San Mateo County Health Department Groundwater Protection
2000 Alameda de las Pulgas, Suite 100, San Mateo, CA 94403
County Project Manager: Marc Mullaney
Title: Hazardous Materials Specialist III
Telephone Number: (650) 372 - 6289

II. CASE INFORMATION

Site Name: RMC Lonestar

Site Address: 1026 Bransten, San Carlos, CA APN: 046-131-580

RB LUSTIS Case #: 41-1071	Local Case #: 770063	LOP Case #: 770063
URF Filing Date: 12/9/1997	Record ID #: RO0001611	SWEEPS No.

Responsible Party Information

Name	Address	Phone #
Cemex (formerly RMC Lonestar)	5180 Golden Foothill Parkway, El Dorado Hills, California 95762-9608	

Tank Information

Tank #	Size in Gallons	Contents	Closed-In Place/ Removed	Date
1	7,500	gasoline	Removed	Dec 1997
2	6,000	diesel	Removed	Aug 1998

III. RELEASE AND SITE CHARACTERIZATION INFORMATION

Cause and Type of Release: UNKNOWN

Site Characterization Complete? Yes

Date Approved by Oversight Agency: August 2013

Number of Monitoring wells installed: 2 Proper screened interval? yes

Highest GW depth BGS: 3.66 ft. Lowest GW depth BGS: 5.29 ft.

Flow Direction: northeast

Most sensitive current use: recharge

Are Drinking Water affected? NO Aquifer Name: San Mateo Plain

Is Surface Water Affected? NO Nearest SW name: Pulgas Creek

Off-Site Beneficial use Impacts (Location): None

Report(s) on File? Yes Where is it filed? SMCo

Treatment and Disposal of Affected Material

<i>Material</i>	<i>Amount (Include units)</i>	<i>Action (Treatment or disposal w/destination)</i>	<i>Date</i>
Tank	7,500 gallon 6,000 gallon	Disposal/recycling, Richmond, CA	1997/1998
Piping	Unknown	Disposal/recycling, Richmond, CA	
Free Product	Trace with GW	Recycling, Alviso, CA	1997/1998
Soil	116 cubic yards	Vasco Road Landfill	1997
Groundwater	8,100 gallons	Recycling, Alviso, CA	1997

Maximum Documented Contaminant Concentrations - Before and After Cleanup

<i>Contaminant</i>	SOIL (PPM)		GROUNDWATER (PPB)	
	<i>Before</i>	<i>After</i>	<i>Before</i>	<i>After</i>
TPH-gasoline	1.8	ND	5,900	120
TPH-diesel	82	ND	250,000	290
MtBE	0.17	ND	300	ND
Benzene	0.007	ND	530	ND
Toluene	ND	ND	450	ND
Ethylbenzene	0.01	ND	230	ND
Xylenes	0.05	ND	300	ND

IV. CLOSURE

Does completed corrective action protect existing beneficial uses per the Regional Board Basin Plan? <i>Yes</i>
Does completed corrective action protect potential beneficial uses per the Regional Board Basin Plan? <i>Yes</i>
Does corrective action protect public health for current land use? <i>Yes</i>
Site Management Requirements: <i>Yes, see Comments below</i>
Should corrective action be reviewed if land use changes? <i>No</i>
Monitoring Wells Decommissioned? <i>Yes</i> Number Decommissioned: 2 Number Retained: 0
List Enforcement Actions Taken: <i>None</i>
List Enforcement Action Rescinded: <i>None</i>

V. RWQCB Notification

<i>Date Submitted to RB:</i> SEP 18 2013	<i>RB Response:</i>
<i>RB Staff:</i> Cheryl Prowell	<i>Title:</i> Water Resources Control Engineer

Comments:

An unknown amount of hydrocarbon impacted soil, as shown in Figure 2, as well as impacted groundwater, Figure 3, remains in the subsurface at the site. City of San Carlos Building Department has been notified that should excavation or development of the property be proposed that may encounter impacted soil or groundwater, San Mateo County Environmental Health Division must be notified as required by Government Code Section 65850.2.

APPENDIX H

QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

NICK WALCHUK

Principal

Nick Walchuk has 24 years of due diligence and site assessment experience in support of a diverse array of clients, including attorneys and financial institutions, small businesses and multinational corporations, as well as developers and private property owners. His broad range of experience includes the design and implementation of site characterization and remedial activities, development and evaluation of remedial cost estimates, performance of facility closure and similar evaluations, and strategic client support during negotiation with regulators, buyers/sellers, and/or third parties. He collaborates with Ramboll colleagues to evaluate vapor intrusion concerns, indoor and ambient air quality issues, address waste management issues, and perform human health risk assessments. Nick is registered as a professional geologist in California.

YEARS IN RAMBOLL

16

EDUCATION

1996

BA, Geology

University of California, Berkeley, California

COURSES/CERTIFICATIONS

Professional Geologist – California (No. 8040)

Legacy ENVIRON Global Leadership Development Program

OSHA 40-hour Hazardous Waste Operations and Emergency Response Standard (HAZWOPER)

PROJECTS

- Serves as a regional manager of an environmental risk management program developed by Ramboll for a major real estate investment trust (REIT) containing more than 100 properties with 200 tenants throughout the western and eastern United States. Various services are provided under the umbrella of the program, including: 1) environmental site assessments; 2) soil, soil gas, and groundwater investigations conducted pursuant to property acquisition, financing, development, or divestiture; negotiations and correspondence regarding environmental matters with regulatory agencies on behalf of the client; 3) tenant environmental audits to evaluate biotechnology tenant operations and facility closure/decommissioning procedures; and 4) providing general consulting services to assist the client's risk management and construction groups regarding environmental, waste management, and site development matters. [2005-current]

Ramboll
2200 Powell Street
Suite 700
Emeryville, CA 94608
United States of America

- Assisted several confidential clients in the telecommunications and retail industries with waste characterization and survey of waste streams generated at facilities throughout California. Sometimes conducted in response to consent decree/judgments, these audits typically have included review of client and facility documentation, development of standardized audit protocols, coordination and implementation of solid waste audits and production of deliverables used by clients and counsel to demonstrate compliance and progress toward required and/or regulatory targets, improvements in relation to the Consent Judgment, and also to guide client planning, development, and refinement of client-internal training programs. [2014-current]
- Provided advisory and environmental due diligence services for a confidential academic institution. Environmental consulting and technical services were in support of potential acquisition of a property with known contamination that was undergoing redevelopment. Environmental risks were evaluated with respect to potential future uses. Specific tasks involved a third party review of site investigation and remediation reports as well as vapor mitigation system designs. [2020]
- Mr. Walchuk serves in a director role in North America for Ramboll's programmatic support of a major confidential client in the datacenter industry. Ramboll's support for this client includes the performance of multidisciplinary due diligence screening evaluations as part of the site selection process, and includes topic areas such as permitting, entitlement and development, typical environmental due diligence, air quality, geotechnical, traffic, noise, water infrastructure, flood risk, and other elements. These fast-paced projects are typically delivered in accelerated timeframes and on budget in support of client decision-making strategies. [2019-current]
- For numerous projects in California, Mr. Walchuk performs, manages, and coordinates support for developer clients at all stages of site redevelopment:
 - Pre-acquisition: preliminary information review, environmental due diligence including Phase I and Phase II assessments, strategic planning support in relation to potential future environmental costs relative to potential or proposed future site use (e.g., entitlement or environmental review concerns, regulatory oversight and/or environmental matters for construction);
 - Entitlement, redevelopment, and construction planning: evaluating mitigation requirements or conditions of approval placed on the project by local authorities, subsurface sampling in support of budget development for costs related to soil excavation/disposal and dewatering, asbestos and lead paint surveys, air quality investigations and other risk evaluations, development of soil management and dust control plans;
 - During construction: assistance with soil sampling and/or data evaluation for soil disposal profiling, working with the client and/or owner's representative as liaison with the excavation and grading contractor, noise evaluation, construction emissions tracking, support for meeting other mitigation requirements;
 - Post-construction: development of project completion summaries related to environmental matters – these can be completed to fulfil requirements under environmental regulatory oversight, and/or for client recordkeeping purposes to provide comprehensive documentation in the event of a future sale of the property.
- Conducted or directed hundreds of environmental site assessments, numerous site investigations, and provided strategic support for implementation of remediation (where warranted) in combination with proposed redevelopment plans. Such projects often include considerable interaction and negotiation with local and/or state environmental regulatory agencies, and required the navigation of local regulatory programs such as the Maher Ordinance (San Francisco), voluntary cleanup programs (Santa Clara and San Mateo counties), the San Francisco Regional Water Quality Control Board's (RWQCB) Low-Threat Chlorinated Solvent Site guidance, and the state California Land Re-use and Revitalization Act (CLRRRA). As a result of work on such projects, Mr. Walchuk has established strong relationships with local city, county, and state regulators. [1997-current]

- Assisted with the “Mission Rock” development in San Francisco, located along the shoreline of San Francisco Bay and under the oversight of the Department of Toxic Substances Control (DTSC) and the San Francisco Department of Public Health. Historical operations resulted in the presence of metals, chlorinated solvents, polyaromatic hydrocarbons, and petroleum hydrocarbons in subsurface media, which required management to allow for construction to take place. Work involved preparation of an Updated Human Health Risk Assessment (HHRA) to modify an existing land use covenant (LUC) for select portions of the site, preparation implementation of a Soil Management Plan (SMP) and a Dust Control Plan (DCP) to satisfy requirements of the San Francisco Department of Public Health (SFDPH) and DTSC as well as an Asbestos Dust Mitigation Plan (ADMP) to satisfy requirements of the Bay Area Air Quality Management District (BAAQMD), as well as evaluation of potential impacts of certain aspects of the project to ecological receptors. Support during redevelopment on our client’s behalf included interaction and coordination with multiple general contractors tasked with construction on different areas of the site. [2017-current]
- Following management and completion of several ESAs for a prospective purchaser of properties within an area of commingled ground water contamination (chlorinated solvents) emanating from the subject site and two NPL (Superfund) sites, conducted soil, ground water, and soil gas data collection and associated evaluation and report preparation. Nick coordinated a subsequent human health risk assessment, and participated in calls and meetings between regulators, and sellers’ and buyers’ counsel to facilitate the implementation of land use restrictions at the sites, allowing Ramboll’s client to proceed with the purchase of the site. Several years later, Mr. Walchuk assisted the same client with the sale of the property, a process which encompassed two years of strategic negotiation support involving the buyer, a third party responsible party, and state and federal environmental regulators regarding an appropriate investigative and remedial approach that could be implemented in conjunction with planned redevelopment of the site. [2006-2015]
- Mr. Walchuk directed facility closure activities related to the closure of a former recycled paperboard mill and an adjacent paper packaging manufacturing facility. The client terminated operations at each site separately, followed by separate real estate transactions. Ramboll performed facility closure activities at each, including closure work plan preparation, environmental sampling in compliance with agency requirements and as part of seller due diligence, oversight of contractors during implementation of closure activities, interacted with regulatory agencies on the client’s behalf, and prepared final completion reports for agency approval. Ramboll’s work facilitated an efficient completion of the client’s sale of each site soon after completion of facility closure. [2011 and 2017]
- For a site impacted with chlorinated solvents that were discovered during acquisition due diligence, Mr. Walchuk directed the investigation, delineation, risk evaluation, and long term groundwater monitoring of the plume underlying the site. Following the sale of the property to a new owner that opted for a more active approach to resolving the matter, Nick directed the design and implementation of further delineation and remediation that included confirmation of plume definition to the satisfaction of the local oversight agency. Investigation methodologies included the use of membrane interface probe (MIP) technology and groundwater sampling from multiple groundwater bearing zones, and remediation included the installation of horizontal wells beneath an existing building and active soil vapor extraction to reduce contamination concentrations and risks related to vapor intrusion. [2008-2018]
- For a multinational corporation at an orphan site in the San Francisco Bay Area, provided investigative and consulting services in support of regulatory case closure under the San Francisco Regional Water Quality Control Board’s (RWQCB) Low-Threat Chlorinated Solvent Site guidance. The site was in long-term post-remedial monitoring status when the client took active responsibility for the site. Following development and implementation of soil gas and indoor air quality investigations and an evaluation of potential human health risks, the RWQCB rescinded the cleanup order for the site and issued case closure. [2005-2009]
- Provided due diligence and related support to a San Francisco Bay Area auto maker with respect to local facilities as well elements of site selection for major new facilities. Local projects have included review of remedial activities to address legacy contamination issues under a Corrective Action

Consent Agreement with the California Department of Toxic Substances Control (DTSC). [2012-2015]

- Provided assistance to Habitat for Humanity and other non-profit organizations in support of site redevelopment for affordable housing and schools, including engagements on a pro bono basis. These projects have included environmental site assessment and reviews of historical information, evaluation of known and potential contamination concerns, site characterization and investigation including soil, soil gas, and groundwater sampling, design and implementation of remedial activities, and strategic support for state and local agency interaction prior to and during redevelopment. [2009-2019]
- Developed a scope of work and directed site characterization activities at a former pesticide mixing facility in Pearl Harbor, Hawaii, pursuant to a Unilateral Administrative Order issued by USEPA to conduct site cleanup as a Non-Time-Critical Removal Action under CERCLA. Subsequent work has included the preparation of an Engineering Evaluation and Cost Analysis (EE/CA) Work Plan, including evaluation of human health and ecological risks, and implementation preparations are underway. This project has involved significant negotiation and interaction with three regulatory entities, including USEPA, the US Navy, and the state of Hawaii. [2009-current]
- For a large developer and landowner, provided oversight of a major remediation project in the Mission Bay Redevelopment Area along the southern waterfront of San Francisco, California. Project oversight included the active supervision of contaminated soil and ground water removal operations performed by the responsible party, participation in weekly stakeholder meetings, and interacting with local regulatory agencies and the responsible party on behalf of the property owner. [2005-2007]
- Assisted a major real estate investment trust with unique issues arising during site redevelopment at a San Francisco Bay Area site. An abandoned oil pipeline was discovered during site construction, and the resulting project required researching the history and ownership of the pipeline, as well as its removal from the property and associated soil sampling. Subsequent tasks included additional site characterization to delineate potential soil and groundwater impacts to support negotiations with the local oversight agency regarding a low-risk approach to site closure. [2009-2011]

negotiation with local and/or state environmental regulatory agencies, and required the navigation of local regulatory programs such as voluntary cleanup programs (Santa Clara and San Mateo counties), the San Francisco Regional Water Quality Control Board's (RWQCB) Low-Threat Chlorinated Solvent Site guidance, and the State's California Water Boards Underground Storage Tank (UST) Program under the Low-Threat UST Case Closure Policy. [2006-current]

- Provide expert technical services in the classification of environmental cost recovery disputes for cases related to industrial facilities, manufactured gas plants and sediment remediation sites. Reviewed investigation and remediation activities and the associated costs related to sites contaminated with petroleum products, chlorinated solvents, polychlorinated bi-phenyls (PCBs), and heavy metals. Technical work supported clients in cost allocation and recovery cases. Provided analysis of both incurred and future costs. Other tasks include evaluating the nature and extent, and timing of releases. [2016-2019]
- Managed a large-scale (5.5 million dollar) remediation project with volatile organic compound (VOC) impacts to soil and multiple aquifers. Responsibilities included ensuring all regulatory and client specific requirements were met. Specific tasks at the former chemical manufacturing facility included a residential soil vapor intrusion investigation, operation of a groundwater extraction treatment system, phytoremediation pilot study, soil excavation and associated well abandonment and replacement activities, lower water bearing zone pilot test, and semiannual groundwater and soil vapor monitoring. Responsibilities also included implementation of an enhanced in-situ bioremediation (EISB) pilot test for the shallow water bearing zone and subsequent full-scale implementation that involved installation of two transects of 30 injection wells each and injection of emulsified vegetable oil (EVO) into each transect of wells. Subsequent evaluation of EISB activities through periodic performance monitoring indicated biodegradation of tetrachloroethylene (PCE) and trichloroethylene (TCE). [2013-2016]
- Managing a 20-acre development site, which was formerly a portion of a US Steel factory. Site structures were previously removed and lead, hydrocarbon, and PCB impacted material had been placed and covered with an engineered cap over a majority of the Site. Specific tasks included: conducting regulatory agency required cap inspections; consulting with management, design, and construction team members to help minimize the hazardous materials exposure and costs; overseeing mitigation measures during redevelopment; and ensuring project compliance with applicable permits and regulations. [2016-2019]
- Managed industrial site, which was formerly a portion of the Benicia Arsenal, with both hydrocarbon and VOC impacts to environmental media. Specific tasks included: leading the remediation effort for TPH impacted soil and groundwater from a former diesel UST through excavation and addition of chemical oxidants; investing soil gas and indoor air VOC impacts; preparing a request for closure for both TPH and VOC impacted media; and corresponding with stakeholders. [2016-2019]
- Field task lead for a site with metals contamination to soil, several creeks, and multiple aquifers. Tasks included leading field teams; preparation of field paperwork and guidance documents; geomorphologic and soil mapping floodplains along four tributaries; and sediment and soil sampling within and along creeks. Determined soil classification groups based on geomorphic surface, pedological properties, mineralogical properties, and particle size. [2013-2016]
- Managed and performed routine groundwater monitoring and other site investigations at an active lead smelting facility with 28 operable units, 2 post-closure units, 25 solid waste management units and 4 areas of concern as required under a RCRA Equivalent Waste Facility Operations and Post-Closure Permit (Part B Permit). Additional responsibilities including leading inspection efforts for facility underground piping, sumps, and tanks, and subsequent sampling beneath these components for collection of soil, soil vapor, and soil-pore-liquid. [2007-2012]
