SIGNATURE AND ENVIRONMENTAL PROFESSIONAL STATEMENT

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

We have the specific qualifications based on education, training, and experience to assess a site of the nature, history and setting of the subject site. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

1. SUMMARY

Ramboll US Consulting, Inc. (Ramboll) was retained by The Minkoff Group (Minkoff) to perform a Phase I Environmental Site Assessment (ESA) of the site located at 1026 Bransten Road in San Carlos, California (herein referred to as the "facility" or the "site"). Ramboll's assessment was conducted in connection with a potential financial transaction. The objective of the Phase I ESA, which was conducted in conformance with the scope and limitations of ASTM International's *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* E1527-13 (the "ASTM Standard"), was to identify Recognized Environmental Conditions (RECs), as defined in the ASTM Standard. At the request of Minkoff and its capital partner J.P. Morgan Investment Management, Inc. (JPMIM), Ramboll has completed the additional Non-ASTM Standard services as outlined in JPMIM's standard Phase I ESA Scope of Work.

Tables 1 and 2 provide the project information and summary of findings, respectively. Table 2 includes applicable ASTM findings, which are categorized as RECs, historical RECs (HRECs), controlled RECs (CRECs), and potential Vapor Intrusion Concerns (pVICs).

Table 1: Project Information			
Client Name:	The Minkoff Group and J.P. Morgan Investment Management Inc.	Site Visit Date:	January 13, 2022

Email:	nwalchuk@ramboll.com lbenitez@ramboll.com	Building Square Footage (Total):	Approximately 300 square feet
Site Name:	N/A	Site Acreage:	Approximately 2.4 acres
Site Address:	1026 Bransten Road	Foundation(s):	N/A
Site City, County, State:	San Carlos, San Mateo County, California	Site Use:	Occupied by CEMEX, a cement and concrete manufacturing and distributing company.

Table 1: Project Information

Assessor's Parcel Number (APN)	046-131-630	Site History:	The site was developed with several small structures prior to the 1940s. The site was occupied by a feed and fuel company in 1950, and a batch concrete/ready-mix plant was constructed in the 1950s. Cement and concrete operations have continued since that time, and include cement manufacturing, vehicle parking and maintenance, sand and rock aggregate storage, and chemical storage. The original batch plant is present but currently inactive, and the centrally located and currently operating batch plant was constructed in 2015. Site operations also include a reclamation pond where process waste and stormwater is collected and re-used in facility processes.

Notes: Parenthetical numbers correspond to conclusions discussed in Sections 1.1 and 8 below.								

Ramboll identified the following Recognized Environmental Condition (REC), as defined by the ASTM Standard:

- (1) Chlorinated VOCs in Groundwater Beneath the Site.** Concurrent to this Phase I ESA, Ramboll conducted a soil, soil vapor, and groundwater investigation at the site to evaluate site conditions in relation to the long-time industrial use and known contamination sources in the vicinity of the property, and the former USTs located on site (discussed below). Sampling locations were selected to assess subsurface conditions in the vicinity of the former USTs and historical auto repair and based on the long time industrial use of the surrounding area and known groundwater impacts in the vicinity, to evaluate site-wide groundwater for the presence of VOCs. A separate Phase II report will be issued; findings are summarized herein.

Field work was conducted on February 21 and 22, 2022. Soil samples were analyzed for metals, organochlorine pesticides (OCPs), total petroleum hydrocarbons as gasoline (TPH-g), diesel (TPH-d) and motor oil (TPH-mo), and volatile organic compounds (VOCs), groundwater samples were analyzed for TPH-g/d/mo and VOCs, and soil vapor samples were analyzed for VOCs. Findings of the investigation indicate the following: (1) soil samples did not contain any analyzed constituents above commercial screening criteria; (2) groundwater samples contained several VOCs above applicable screening criteria and TPH concentrations were generally not detected nor above applicable screening criteria; and (3) the soil vapor sample collected and analyzed for VOCs did not contain any constituents above commercial screening criteria (i.e., the San Francisco Regional Water Quality Control Board [SFRWQCB] Environmental Screening Levels [ESLs]). PCE concentrations in groundwater samples were detected above the ESL based on potential vapor intrusion concerns (2.8 micrograms per liter [$\mu\text{g/L}$]) in seven of nine groundwater samples collected and ranged from 2.8 to 32 $\mu\text{g/L}$, with maximum concentrations observed in two locations along the site boundary at Bransten Road (REH-GW07 and REH-GW08 contained PCE at concentrations of 20 $\mu\text{g/L}$ and 32 $\mu\text{g/L}$, respectively). The same two samples contained TCE above the vapor intrusion-based ESL (7.5 $\mu\text{g/L}$) at 8.7 $\mu\text{g/L}$ and 43 $\mu\text{g/L}$, respectively.

The source of the VOC concentrations identified in groundwater are not clear; there is no known historical use of chlorinated VOCs at the site, and there appears to be some level of contribution from upgradient, off-site sources as well as the potential for impacts from other nearby (i.e., cross-gradient) properties. Based on the findings of the February 2022 investigation, Ramboll currently categorizes this matter as a REC, while also noting that adjacent properties in the cross- and downgradient directions are known sources of chlorinated VOCs in groundwater, at higher concentrations than those that have been detected on site.

Ramboll identified the following historical REC (HREC), as defined by the ASTM Standard:

(2) Residual Soil Contamination from an Underground Storage Tank (UST) Release. The site is listed with closed status on the California Recovered Archive Leaking Underground Storage Tank (CA RGA LUST), Leaking Underground Storage Tank (LUST) and Cortese databases for a release of petroleum hydrocarbons to the soil and groundwater. The site formerly operated two underground storage tanks (USTs): one 7,500-gallon gasoline UST (removed in December 1997) and one 6,000-gallon diesel UST (removed in August 1998). In December 1997, following removal of the 7,500-gallon gasoline UST, associated dispenser island and product piping, approximately 116 cubic yards of impacted soil and approximately 4,000 gallons of potentially impacted groundwater were removed and disposed off site. Similarly, in August 1998, following removal of the 6,000-gallon diesel UST, associated dispenser island and product piping, an unknown quantity of impacted soil was removed. Chemicals of concern at the site have been identified as total petroleum hydrocarbons (TPH) as gasoline (TPH-g) and diesel (TPH-d), and benzene, toluene, ethylbenzene, and xylenes (BTEX). Additional investigations have been performed from 1999 through 2013, including the installation of monitoring wells in 2000. On September 18, 2014, the San Mateo County Environmental Health Department (SMCEHD) Groundwater Protection Program (GPP) issued a Case Closure letter for the case based on anticipated continuing natural attenuation of residual contaminants left in place, which included maximum concentrations of 120 micrograms per liter ($\mu\text{g/L}$) TPH-g and 290 $\mu\text{g/L}$ TPH-d (these concentrations are marginally above the most conservative current ESLs based on drinking water use [groundwater is not used on site]). Concentrations of BTEX were not detected above laboratory reporting limits at

that time. Further, the results of Ramboll's recent investigation included analysis for TPH and BTEX compounds, and no exceedances of current ESLs were identified in any groundwater samples on site. The closure letter specified that any changes in land use, or activities that require the removal of soil or groundwater, must be approved by the SMCEHD. Based on the prior issuance of no further action by SMCEHD supplemented by the findings of the Ramboll's recent site investigation, Ramboll considers this matter to represent a HREC. Ramboll does not consider the presence of a HREC to represent an ongoing contamination concern to the site.

2. INTRODUCTION

2.1 Purpose

Ramboll was retained by Minkoff to conduct a Phase I ESA of the site. The purpose of the assessment was to identify RECs, which are defined in the ASTM Standard as:

“The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. *De minimis* conditions are not recognized environmental conditions.”

2.2 Detailed Scope of Services

Ramboll completed the following tasks, consistent with the ASTM Standard, during its Phase I ESA of the site:

- A visit to the site by Zoe Pfahler January 13, 2021 to observe the exterior and interior features of the site and to identify the uses and conditions specified in the ASTM Standard. In addition, Ramboll observed the adjoining properties from the site or adjacent public thoroughfares. Photographs taken during the site visit are presented in Appendix A.
- An interview during the site visit with Grant Cutts, the project manager of Bay Area maintenance at CEMEX. Mr. Cutts has been with the company for 3 years. The aforementioned individual is referred to herein as “facility personnel.” The facility personnel interviewed by Ramboll was identified by representatives of the site owner as having good knowledge of the uses and physical characteristics of the site.
- A review of information contained in federal and state environmental databases, as obtained from the sources noted below:
 - A radius report prepared by Environmental Data Resources, Inc. (EDR, see Appendix B), which presents the results of searches of federal and state databases for the site, as well as properties near the site (herein referred to as the “environmental database report”). The radius searched for each database, as well as the databases themselves, was selected in accordance with the ASTM Standard.
 - The United States Environmental Protection Agency’s (USEPA’s) Envirofacts database, which provides site information contained in multiple USEPA regulatory databases.
 - The Department of Toxic Substances Control (DTSC) EnviroStor database, which contains information about certain regulated facilities in California.
 - The State Water Resources Control Board (SWRCB) GeoTracker database, which contains information about groundwater contamination and clean-up sites in California.
 - The California Geologic Energy Management Division (CalGEM) Well Finder, which contains information regarding oil and gas wells on and in the site vicinity.
 - The California Environmental Protection Agency (CalEPA) Regulated Site Portal, which aggregates environmental compliance data.
 - The DTSC Hazardous Waste Tracking System (HWTS), which contains hazardous waste manifest information reported to CalEPA.

- A review of standard historical sources (included as Appendix C) and local agency inquiries, as defined in the ASTM Standard. The following resources were reviewed:
 - Readily available historical sources, including (where available) historical topographic maps and aerial photographs, city directories, fire insurance maps, and building permit history (including via the EDR Lightbox application) to develop a history of the previous uses of the site and surrounding area.
 - Historical and site-specific information obtained from the following local agencies: San Mateo County Assessor's Office, City of San Carlos Building Department (Building Department), San Carlos/Redwood City Fire Department, and San Mateo County Environmental Health Department (SMCEHD).
- A review of physical setting sources, as defined in the ASTM Standard, including:
 - The current United States Geological Survey (USGS) 7.5-minute topographic map that depicts the area on which the site is located.
 - Geologic, hydrogeologic, or hydrologic sources as provided in the environmental database report.
- A search for environmental liens or other activity and use limitations (AULs) for the site, provided by EDR (as shown in Appendix D). Ramboll ordered the lien search using the parcel number believed to be associated with the site, as obtained from the Assessor.
- A review of the following prior environmental reports, topographic surveys, and regulatory correspondence pertaining to the site, provided by the Client or obtained from the GeoTracker database (herein referred to as the "previous environmental reports"):
 - *Tank Removal Report, RMC Lonestar Plant 207, 1026 Bransten Road, San Carlos, California*, prepared by HK2, Inc./SEMCO, dated November 1998;
 - *Subsurface Investigation Report, 1026 Bransten Road, San Carlos, California*, prepared by AllWest Environmental, Inc., dated September 8, 1999;
 - *Results of Further Soil and Groundwater Investigation, 1026 Bransten Road, San Carlos, San Mateo County, California*, prepared by SOMA Environmental Engineering, Inc., dated March 4, 2013;
 - *First Semi-Annum 2013 Groundwater Monitoring Report, 1026 Bransten Road, San Carlos, California*, prepared by SOMA Environmental Engineering, Inc., dated May 22, 2013; and
 - *Case Closure Remedial Action Oversight for CEMEX (formerly RMC Lonestar) Facility Located at 1026 Bransten, San Carlos, California*, prepared by SMCEHD, dated September 18, 2014.

The Phase I ESA component of this review was conducted in accordance with the methodology specified in ASTM Standard E1527-13, as agreed upon by Ramboll and Minkoff in January 2022. The standard ASTM scope was expanded at the request of Minkoff to include the following non-scope tasks:

- A Tier I non-invasive vapor encroachment condition (VEC) screen in accordance with the methodology specified in ASTM International's Standard Practice for Vapor Encroachment Screening on Property Involved in Real Estate Transactions E2600-15.

- A review of information regarding the presence of asbestos, radon, and LBP.
- A review of information pertaining to the existence of wetlands on the site, including a NEPA Search report provided by EDR.
- A review of any available environmentally-related permits, licenses, and registrations.
- A review of the NEPA Search Report provided by EDR to assess the existence of cultural and historic resources (i.e., historic structures, significant archaeological sites, religious properties, other features of historic significance or known cultural resources in the vicinity of the site).
- A review of the NEPA Search report provided by EDR to assess the presence of endangered species in the vicinity of the site.
- A cursory inspection of the site for the presence of visually obvious mold growth within the envelope and the interior of the building and a review of documents provided by Minkoff pertaining to known water intrusion events (if any).
- Observations around the site for significant power transmission facilities on the site and/or adjacent properties.

2.3 Limitations and Exceptions

The report is considered current only for a period of 180 days from the site inspection in accordance with the ASTM Standard. The conclusions presented in this report represent Ramboll's professional judgment based upon the information available and conditions existing as of the date of the review. In performing its assignment, Ramboll must rely upon publicly available information, information provided by the client and information provided by third parties. Accordingly, the conclusions in this report are valid only to the extent that the information provided to Ramboll was accurate and complete. This review is not intended as legal advice, nor is it an exhaustive review of site conditions or facility compliance. Ramboll makes no representations or warranties, express or implied, about the conditions of the site.

Ramboll's scope of work for this assignment did not include collecting samples of any environmental media with the exception of drinking water samples for analysis for lead. As such, this review cannot rule out the existence of latent conditions, including contamination not identified and defined by the data and information available for Ramboll's review; however, this report is intended, consistent with normal standards of practice and care, to assist the client in identifying the risks of such latent conditions.

The scope of work for this assessment includes a review of additional non-ASTM scope considerations and other matters (see Section 2.2). A comprehensive survey or inspection for asbestos, LBP, mold, radon, and wetlands was not performed.

3. SITE DESCRIPTION

3.1 Site Location and Legal Description

The approximately 2.4-acre site is associated with the address 1026 Bransten Road and located within a single parcel, associated with the assessor's parcel number (APN) 046-131-630. The site is located in San Carlos, San Mateo County, California (Figure 1).¹ The APN associated with the site includes the target address (1026 Bransten Road), as well as a narrow corridor that includes a paved driveway in front of address 1008 Bransten Road and a landscaped strip in front of 1000 Bransten Road.

3.2 Site and Vicinity General Characteristics

The site consists of a paved yard with an industrial plant used to manufacture ready-mix cement. There are two batch plants on site, one that is inoperable and one that is actively used to create dry ready-mix cement product. There is one two-story "building" located along the northwestern border of the site, which consists of two stacked shipping containers. This building is approximately 300 square feet and is used as an office on the first floor and control room on the second floor. In addition, there are three shipping containers, two along the southeast site boundary that are used for dry materials and spare parts storage, and a third in the northern corner of the site that is used for pump storage. There is an above ground fuel storage tank (AST) on site in addition to seven above ground chemical storage tanks lined up along the northwestern site boundary. The site is fully paved and slopes gently towards a paved reclamation pond located in the eastern corner of the site, which stores all stormwater runoff and process wastewater generated on site. Dry storage of raw materials includes sand and aggregate rock in bins and piles along the southeastern site boundary. Several cement trucks and other machinery are present on site.

The site is accessible via a paved driveway along Bransten Road at the southeastern site boundary (Figure 2). There are several on-site water bodies. Table 3 provides an overview of utility information for the site.

Table 3: Site Utility Information		
Conditions	Source	Description
Heating and Cooling Equipment	Facility personnel	There is one air conditioning unit and one electric heating unit in the office building on site.
Electricity Supplier	Facility personnel	Pacific Gas and Electric (PG&E)
Natural Gas Supplier	Facility personnel	No gas supplied to the site
Use of Fuel Oil for Building Heat	Facility personnel	No reported historical use of heating oil by facility personnel.
Water Supplier	City personnel	California Water Service – Bayshore District
Sanitary Sewer	City personnel	City of San Carlos Public Works Department

¹ The legal description of the site is contained in Appendix E.

Table 3: Site Utility Information		
Conditions	Source	Description
Septic Systems	Visual observation	No reported historical use of a septic system by facility personnel.

3.3 Current Use of the Site

The site is currently occupied by CEMEX for use as a Ready-Mix concrete manufacturing plant. Dry Ready-Mix concrete is produced using by the on-site batch plant, and is emptied directly into a cement truck, where it is mixed with water and transported off site. Other operations included office use and minor vehicle maintenance.

The site is currently owned by the Lonestar California, Inc., which was acquired by CEMEX approximately seven years ago.

3.4 Current Uses of Adjoining Properties

The site is in a mixed commercial and industrial land use area in San Carlos. The nearest residential area is located approximately 400 feet northwest of (cross- to upgradient from) the site. Based on Ramboll's visual observations from the site boundary and public rights-of-way, and a limited review of publicly available information, a general determination of the current use of adjacent properties was developed, as described Table 4.

Table 4: Current Use of Adjacent Properties		
Direction	Property/Land Use	Ramboll’s Observations
Northwest	Broadway Auto (779 Old County Road), an autobody shop, D & J Tile Co. (1045 Terminal Way), a tile design center and warehouse, and Tanklage Construction Co. (1025 Tanklage Road), a construction company warehouse. Beyond those businesses is Terminal Road.	No apparent exterior manufacturing or chemical storage operations were observed. No concerns were noted.
Southwest	Morey Transport (781 Old County Road), a cargo truck business, beyond which is Old County Road.	
Northeast	Aim Sheet Metal (1008 Bransten Road), a metal warehouse, beyond which is the City of San Carlos Corporation Yard (1000 Bransten Road).	
Southeast	Bransten Road, beyond which is San Carlos Garden Supply center (821 Old County Road), Legarza Sports (1027 Bransten Road), a sports school, and Camco Furnace (1017 Bransten Road), a furnace retailer.	
Notes: During the site visit, Ramboll walked or drove by the borders of adjoining properties. Ramboll did not enter neighboring properties.		

4. USER PROVIDED INFORMATION

Ramboll provided Minkoff with a User Questionnaire (consistent with Appendix X3 of the ASTM Standard) that requested information relating to environmental liens, AULs, specialized knowledge of the site, property value diminution, chain-of-title, or any other commonly known or obvious indications of site contamination that was not otherwise provided to Ramboll. The user did not provide any information that was not otherwise obtained and reviewed by Ramboll.

4.1 Title Records

Ramboll requested a Chain of Title Report describing the past and present ownership of the site, extending a minimum of 50 years or beginning at the time when the site was undeveloped, whichever is greater. EDR searched public records of the San Mateo County Recorder's Office, from January 1, 1940 through January 12, 2022. The following table presents the history of the site's title deed, dating back to April 25, 1929.

Date	Title Received From	Title Vested In
August 12, 2004	Union Pacific Railroad Company (F/K/A Southern Pacific Transportation Company)	Lonestar California, Inc.*
December 31, 1999	RMC Lonestar F/K/A Lonestar California	Lonestar California, Inc.
December 15, 1987	Lonestar California, Inc. and New York Trap Rock Corporation	Lonestar California
December 15, 1987	Pacific Read-Mix Inc., F/K/A San Carlos Feed & Fuel Company F/K/A Pacific Ready Mix	Lonestar California, Inc. and New York Trap Rock Corporation
April 25, 1929	Charles Bransten, K.A. Winter and Grace Winter	San Carlos Feed and Fuel Company

*CEMEX acquired Lonestar California in approximately 2015.

The title received from Union Pacific Railroad Company on August 12, 2004, appears to be for only a portion of the site that was formerly occupied by a rail spur, located primarily along the Bransten Road frontage and curving to the north through the western side of the site.

4.2 Environmental Liens or Activity and Use Limitations

According to a lien and AULs search report provided by EDR, there are no environmental liens or AULs associated with the site parcel (specifically, APN 046-131-630).

4.3 Specialized Knowledge

Ramboll was provided with answers to the user questionnaire by Erin Loza, the Director of Environmental at Cemex.

4.4 Valuation Reduction for Environmental Issues

Ramboll was not provided with any specialized knowledge from the User.

4.5 Owner, Site Manager and Occupant Information

The current owner of the site is Lonestar California, Inc., which according to facility personnel was acquired by CEMEX around 2015.

4.6 Reasons for Performing Phase I

Ramboll prepared this Phase I ESA for Minkoff. Ramboll understands that the assessment was conducted in connection with a potential financial transaction.

5. RECORDS REVIEW

5.1 Standard Environmental Record Sources

Ramboll contracted with EDR in January 2022 to prepare of summary of listings in federal and state agency databases for the site and facilities within applicable radii of the site, as specified by the ASTM standard.² A copy of the EDR report is presented in Appendix B.

5.1.1 Database Review for Site

Ramboll reviewed the results of the state and federal environmental database searches performed by the third-party database provider (Appendix B) and reviewed information available in the GeoTracker and EnviroStor databases. The site is listed on several environmental databases, as discussed below. The site is also listed on the following databases related to regulatory compliance: San Mateo County Business Inventory (CA San Mateo Co. BI), California Hazardous Waste Tracking System (CA HWTS), Hazardous Waste Information System (HAZNET), Statewide Environmental Evaluation and Planning System (SWEEPS), Historical UST (HIST UST), California Emissions Inventory Data (CA EMI), Waste Discharge System (WDS), Enforcement and Compliance History Online (ECHO), California Environmental Reporting System (CA CERS), Hazardous Waste and Substance Site List (HIST CORTESE) Aboveground Petroleum Storage Tank Facilities (AST), Index System/Facility Registration System (FINDS), Toxic Chemical Release Inventory System (TRIS), National Pollutant Discharge Elimination System (NPDES), California Integrated Water Quality System (CIWQS), and Resource Conservation and Recovery Act (RCRA) Non-generators. Listings on these databases, by themselves, are not necessarily indicative of contamination.

- **RMC Lonestar.** The site is listed with closed status on the California Recovered Archive Leaking Underground Storage Tank (CA RGA LUST), Leaking Underground Storage Tank (LUST) and Cortese databases for a release of petroleum hydrocarbons to the soil and groundwater. Information obtained from the GeoTracker website³ indicates the site formerly operated two underground storage tanks (USTs): one 7,500-gallon gasoline UST (removed in December 1997) and one 6,000-gallon diesel UST (removed in August 1998). In December 1997, following removal of the 7,500-gallon gasoline UST, associated dispenser island and product piping, approximately 116 cubic yards of impacted soil and approximately 4,000 gallons of potentially impacted groundwater were removed and disposed off site. Similarly, in August 1998, following removal of the 6,000-gallon diesel UST, associated dispenser island and product piping, an unknown quantity of impacted soil was removed. Chemicals of concern at the site have been identified as total petroleum hydrocarbons (TPH) as gasoline (TPH-g) and diesel (TPH-d), and benzene, toluene, ethylbenzene, and xylenes (BTEX). Additional investigations have been performed from 1999 through 2013, including the installation of monitoring wells in 2000. On September 18, 2014, the San Mateo County Environmental Health Department (SMCEHD) Groundwater Protection Program (GPP) issued a Case Closure letter for the case based on anticipated continuing natural attenuation of residual contaminants left in place, which at the time included maximum groundwater concentrations of 120 micrograms per liter (µg/L) TPH-g and 290 µg/L TPH-d. BTEX concentrations were not detected above laboratory reporting limits at that time. The closure letter specified that any changes in land use, or activities that require the

² EDR uses the term "radii" to refer to the ASTM terminology "approximate minimum search distance" in the environmental database report.

³ Information obtained from GeoTracker database listing:
https://geotracker.waterboards.ca.gov/profile_report?global_id=T0608100982

removal of soil or groundwater, must be approved by the SMCEHD. This matter is further discussed in Section 8 of this report.

5.1.2 Database Review for Adjoining Properties

Based on a review of the environmental database search report,⁴ and supplementary information provided by the GeoTracker database, Ramboll identified the following adjoining properties on databases indicative of a potential contamination concern:

- **San Carlos Sheet Metal Work.** The property located at 779 Old County Road (adjacent to the northwest and upgradient from the site) is listed with closed status on the LUST database. Information on the GeoTracker⁵ website indicates that a leak was detected in a gasoline UST during a tank tightness test in 1987. The tank and approximately 50 cubic yards of contaminated soil were removed from the property in 2001. TPH-g, TPH-d, TPH-motor oil (TPH-mo) and BTEX were the primary contaminants identified in soil and groundwater. SMCEHD opened a case in 2001 and three monitoring wells were installed on the property to monitor cleanup progress. All concentrations of primary contaminants in groundwater at the time of closure were below laboratory detection limits with the exception of TPH-g at 120 micrograms per liter (µg/L). The case was granted closure in 2008. It is possible TPH-impacted groundwater from this property may have migrated to the site, though likely at levels below current screening criteria. Based on the most recent groundwater sample results, and the closed case status, the listing does not appear to represent a significant concern to the site.
- **RMC - Reed Roofing.** The property located at 789 Old County Road (adjacent to the west and upgradient from the site) is listed with closed status on the LUST database. In September 2001, a 1,500-gallon gasoline/diesel UST was removed from the property. The presence of TPH in soil and groundwater samples collected during the tank removal indicated that a release had occurred. SMCEHD opened a case in 2001 and recommended further investigation. According to information on GeoTracker⁶, the initial investigation completed in 2002 indicated that TPH-d was the primary contaminant of concern, and groundwater impacts appeared to be isolated to area of the former UST. Five groundwater monitoring wells were installed in 2005, results of which indicated low level gasoline and diesel impacts in groundwater. In 2010, a step-out investigation was implemented to determine the extent of the groundwater impacts to the south and east of the former UST, in the direction of the site. The boring closest to the site contained of 100 µg/L TPH-d and 55 µg/L TPH-g, both below current screening criteria. Groundwater monitoring in 2011 and 2012 indicated TPH concentrations were continuing to attenuate, and a soil vapor investigation in 2014 determined that low-level TPH concentrations in groundwater were not vapor intrusion risk for occupants at the property. Accordingly, the case was granted closure by SMCEHD in 2015. The closure summary notes that any proposed change in land use or proposed soil or groundwater removal activity "at or in close proximity to this facility" must be submitted to SMCEHD's for review and

⁴ Ramboll's analysis of adjoining properties was based on observations made during the site reconnaissance (as discussed in Table 2) and location information for off-site listings as presented in the database report. Also, for purposes of this analysis, Ramboll considers as "adjoining" properties that are adjacent, even if separated by a road or other physical barrier. Ramboll has not included a discussion of compliance-related databases, as Ramboll considers it unlikely that off-site properties listed on compliance-related databases without indication of a release or chemical mishandling represent a potential risk for contamination to the subject site.

⁵ Information obtained from GeoTracker database listing:
https://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0608191165

⁶ Information obtained from GeoTracker database listing:
https://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0608194228

evaluation of risk to public health and the environment. It is possible TPH impacted groundwater from this property may have migrated to the site, though likely at levels below current screening criteria. Based on groundwater sample results during the 2010 investigation and 2011 and 2012 groundwater monitoring events, and the closed case status, the listing does not appear to represent a significant concern to the site

- **Garden Supply.** The property located at 803 County Road (adjacent to the southwest and cross gradient from the site). Information on the GeoTracker⁷ website indicates that a 750-gallon gasoline UST was removed from the property in 1997. A subsurface investigation in 1999 indicated that groundwater in the vicinity of the former UST contained elevated concentrations of TPH-g and methyl tert-butyl ether (MTBE). Free product was identified in monitoring wells installed at the site in 2000. From 2002 to 2004 free product was removed from wells using multiple recovery methods. Groundwater monitoring efforts in 2004 indicated that free product removal was successful, although trace amounts were still present in the wells, and impacts appeared to be limited to the area immediately downgradient from the former UST. In 2001, a volatile organic compound (VOC) assessment was completed to evaluate groundwater. Results indicated tetrachloroethene (PCE), trichloroethene (TCE), and cis-1,2-dichloroethene (cis-1,2-DCE) were present in groundwater beneath the property at concentrations of 85 µg/L to 210 µg/L, 12 µg/L to 26 µg/L, and 6.9 µg/L to 13 µg/L, respectively. It was determined that VOCs detected in groundwater were from an off-property source. The case was granted closure by the SMCEHD in 2012. Based on the most recent groundwater analytical results, the limited extent of the plume, and the closed case status, the listing does not appear to represent a significant concern to the site.
- **Norman & Elaine Strom Property.** The property located at 1008 Bransten Road (adjacent to the northeast and downgradient from the site) is listed with closed status on the LUST database. Information on the GeoTracker⁸ website indicates that the facility is used as a wood workshop for making wooden boxes. In August 1991, evidence of a release was identified during the removal of a 500-gallon gasoline UST from the property. In 2000, a limited subsurface investigation revealed TPH-g and benzene were the primary contaminants of concern in groundwater. Three monitoring wells were installed in 2001, and a quarterly groundwater monitoring program was implemented at the property. By 2005 the extent of soil and groundwater contamination was determined to be adequately defined, residual contaminants were at or below laboratory detection limits, and remediation by natural attenuation was actively occurring. Soil vapor investigations conducted in 2005 and 2006 indicated that no measurable risk to occupants was present in indoor air, but that petroleum contamination was still present in the vicinity of the former UST. As an additional remedial measure, the soil in the area of the former UST was excavated in 2007. The case was granted closure by SMCEHD in 2008. Based on the most recent soil-vapor and groundwater results, the downgradient direction of the contamination source, and the closed case status, the listing does not appear to represent a significant concern to the site.
- **Spencer Kellogg/NL Industries.** The property located at 956 Bransten Road (adjacent to the east and downgradient of the site) is listed with a closed status on the LUST database. According

⁷ Information obtained from GeoTracker database listing:
https://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0608101017

⁸ Information obtained from GeoTracker database listing:
https://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0608185541

to information available on GeoTracker⁹, a leak was discovered during the closure of a gasoline UST in 1990. In an investigation conducted in 1997, toluene, ethylbenzene, and xylenes were detected at significant concentrations in soil. Benzene was below laboratory detection limits in analyzed soil samples. Subsequent investigations were conducted though the reports were not available on Geotracker. The case was granted closure by the SFRWQCB in 1997 since the source of contamination was removed, and remaining contaminants were not considered a risk to groundwater, human health, or environmental health. Closure documentation indicates VOCs (PCE, TCE and dichloroethane [DCA]) detected in groundwater at the property likely did not originate from the leaking UST, and potentially originated from the upgradient property, California Oil Recyclers, Inc. Due to the downgradient direction of this property, and the case closure status, this listing does not appear to represent a significant concern to the site.

- **California Oil Recyclers Inc. / G-C Lubricants Co.** The property located at 977 and 977A Bransten Street (adjacent to the southeast and downgradient of the site) is listed with an active status on the EnviroStor database under the names, G-C Lubricants Co. and California Oil Recyclers Inc. (CORI). According to information available on EnviroStor¹⁰, G-C Lubricants Co. currently operates a lubricating oil packaging facility at the property. A portion of the property was leased to California Oil Recyclers Inc. (CORI) from 1981-1987. Subsurface characterization revealed the presence of soils impacted with TPH, VOCs, and PCBs and shallow groundwater impacted with VOCs, PCBs, and metals. Several monitoring wells were installed between 2002 and 2007 to characterize the extent of the groundwater plume. Generally, the groundwater plume extends towards the east-southeast, in the direction of groundwater flow, away from the site. In 2017, impacted soil was excavated and removed from the property. Semi-annual groundwater monitoring is ongoing and a Corrective Measures Study is being prepared as of September 2021 to address residual subsurface impacts. Due to the downgradient direction of this property, and because Ramboll considers the plume to be adequately characterized in the direction of the site, this listing does not appear to represent a significant concern to the site.
- **Estate of Robert E. Frank.** The property located at 1007 Bransten (adjacent to the southeast and downgradient from the site) is listed with open status on the LUST and CPS-SLIC databases for impacts to soil and groundwater related to historical metal machining operations and storage and handling of petroleum-based oils, solvents and PCE. Environmental investigations began at the property in 2009 for due diligence purposes associated with a planned transaction. Various remediation efforts have been completed since that time and investigation is ongoing. Off-property impacts to groundwater are not well-delineated and the plume originating from this property may co-mingle with the plume from 977 Bransten Road. In 2021, a workplan proposing additional remedial measures, including excavation of residual impacted soil and installation of a permeable reactive barrier, was submitted for agency approval. Due to the downgradient direction of this property, and because Ramboll considers the plume to be adequately characterized in the direction of the site, this listing does not appear to represent a significant concern to the site.

https://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0608191606

¹⁰ Information obtained from the EnviroStor database listing:
https://www.envirostor.dtsc.ca.gov/public/profile_report?global_id=80001427
https://www.envirostor.dtsc.ca.gov/public/profile_report?global_id=80001743

5.1.3 Database Review for Other Surrounding Properties

Ramboll has identified several listings in the environmental database report for non-adjointing off-site properties within applicable ASTM search radii that represent a potential contamination concern to the subject site due to past releases on these sites and possible migration onto the subject site.¹¹

Table 5: Summary of Environmental Database Listings for Surrounding Sites that Represent a Potential Contamination Concern		
Listing Name or Address and Location Relative to the Subject Site	Summary of Information Contained in Database	Ramboll's Comments
Lovan Trust Property (672 Laurel Street) The property, located 0.2 miles west and upgradient from the site.	The property is listed on the LUST and CPS-SLIC databases for soil vapor impacts discovered in 2018.	The property was historically operated as a dry-cleaning business. According to information obtained from the GeoTracker ¹² website, a 2018 soil vapor investigation revealed the presence of VOCs, including PCE, in soil vapor above environmental screening levels (ESLs) for commercial land use at the property. Investigation is ongoing and under regulatory oversight by the SMCEHD. An August 2020 indicates minor PCE impacts are present in groundwater though they are at or close to the ESL for commercial land use. Based on recent groundwater sample results, this listing does not appear to represent a significant concern to the site.
G.N Renn Bulk Storage Tanks (833 Old County Road) The property, located 400 feet south and cross gradient from the site.	The property is listed on the CPS-SLIC database for soil and groundwater contamination.	G.N Renn operated a petroleum fueling facility that contained several ASTs that were removed from the property in 2002. Information on the GeoTracker ¹³ website indicates that soil and groundwater are largely impacted with gasoline and diesel. The degree and extent of groundwater contamination originating from the property is unknown. It appears the responsible party has not completed the agency requested investigation to evaluate potential offsite and downgradient impacts. Based on the cross gradient location of this property, this listing does not appear to represent a significant concern to the site.

¹¹ In its evaluation Ramboll considered only non-adjointing properties listed on databases indicative of contamination, with open status, located potentially upgradient or cross-gradient of the site to represent a potential risk for contamination to the site (as the issuance of regulatory closure suggests that impacts to the site from the noted off-site property are unlikely). Ramboll did not discuss any off-site non-adjointing property that is presumed to be downgradient of the site. This analysis was based on the assumption that a hazardous material released to the subsurface generally does not migrate laterally within the unsaturated soil for a significant distance, but a hazardous material can migrate in the groundwater in a generally downgradient direction; however, the direction of groundwater flow may be affected by localized topographic, hydraulic, and hydrogeologic conditions.

¹² Information obtained from GeoTracker database listing:
https://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T10000011444

¹³ Information obtained from GeoTracker database listing:
https://geotracker.waterboards.ca.gov/profile_report.asp?global_id=SL599992810

The database report indicates that poor or inadequate address information was available for several sites located in the vicinity of the subject site; therefore, these sites could not be readily mapped by the third-party provider. Because the location of these sites with respect to the subject site could not be evaluated, Ramboll is limited in its ability to express an opinion regarding the potential for impact to the subject site from these sites. It was beyond the scope of this review to accurately locate each of the unmapped sites identified by the third-party provider; however, Ramboll reviewed the list of unmapped sites and verified that none appeared to be adjacent to the subject site.

5.2 Additional Environmental Record Sources

Ramboll visited or otherwise contacted local governmental agencies and regulatory bodies for information relating to the site.

Table 6: Local Agency Information for the Site	
Agency Contacted / Document Reviewed	Information Obtained
Assessor	According to Assessor records available online, the site comprises one parcel identified as 1026 Bransten Road (046-131-630). The parcel extends in a narrow corridor in front of the two properties addressed 1008 and 1000 Bransten Road.
CalEPA Regulated Site Portal	According to the CalEPA Regulated Site Portal, the following regulated entities are associated with the site: A former site occupant, RMC Lonestar, is listed on GeoTracker as a LUST Cleanup site. The current site occupant, Cemex Construction Materials, is listed in the Storm Water Multiple Application Report and Tracking System (SMARTS) and the California Environmental Reporting System (CERS) for being a chemical storage facility and hazardous waste generator, and for performing required stormwater sampling and monitoring.
SMCEHD	SMCEHD oversees hazardous material and waste related (i.e., CUPA) matters and the Local Oversight Program (LOP) in San Carlos. The provided records included: permits for the existing AST, waste oil manifests (2006 and 2011), bills of lading (1997-1998), Hazardous Waste Generator Inspection Reports (1993-2013), Hazardous Materials Business Plan Inspection Reports (2011-2020), Hazardous Materials Business Plans (1991-2009), AST Inspection Reports (2011-2020), Spill Prevention, Control and Countermeasures Plans (2000-2014), Stormwater Inspection Reports (1995-2017), HazWaste Small Quantity Generator Inspection Reports (2015-2020), Emergency Action and Spill Prevention Plans (2013 to 2021), tank integrity testing reports (1986-1996), UST tank removal permitting and related documentation (1986 and 1998), geotechnical boring permit (2015), and reports related to a UST removal (1997), related investigation reports (1998-2001), and periodic groundwater monitoring reports (1999-2002). No concerns were noted. SMCEHD provided an incident report indicating that approximately 1,300-gallon release of WRDA 64, a cement additive, occurred in 2013. The release was fully contained within the site perimeter walls over a paved area and was washed into the site's process pond. No waterways were reportedly impacted. Cleanup was initiated the following day. As a preventive measure for future releases, CEMEX installed a concrete secondary containment around the mixture tanks from which the release occurred. Several waste manifests were provided for the site indicating that soil profiled as non-RCRA solid waste containing lead was removed from the property in 2017. No other information was provided.

Table 6: Local Agency Information for the Site

Agency Contacted / Document Reviewed	Information Obtained
Fire Department	Ramboll requested records associated with the site addresses from the San Carlos/Redwood City Fire Department. The provided records included Fire Safety Inspection Reports from 2015 and 2018, as well as a chemical inventory report from 2009 listing the following chemicals stored on site: acetylene, argon, truck cleaner, diesel, helium, propane, nitrogen, phosphoric acid, antifreeze, and oil.
Building Department	Ramboll requested building department records associated with the site address from the San Mateo Clerk's Office. Records included various permits from 1965 to 2015 related to the demolition of the office and a non-operative batch plant as well as other repairs and improvements. No concerns are noted.
SFRWQCB (via GeoTracker)	RMC Lonestar is listed on the GeoTracker database for a closed LUST incident. This matter is further discussed in Section 8 of this report.
DTSC (via EnviroStor)	Ramboll requested records associated with the site address from DTSC and was issued a response indicating that all records available pertaining to the site are accessible via the EnviroStor and HWTS databases. The site is not listed on the EnviroStor or HWTS databases.
CalGEM (via Well Finder)	No active or inactive oil and gas wells are located at the site or surrounding properties.

5.3 Physical Setting Sources

Table 7: Physical Setting

Conditions	Source	Description
Topography		
Elevation (above mean sea level)	USGS Topographic Map; Google Earth	Ranges from approximately 8 feet along near the eastern site boundary to 10 feet along the western site boundary.
Topographic Gradient	USGS Topographic Map; Visual observations	Relatively flat on site, with a gentle downward slope towards the eastern corner. Regional topography slopes gently downward to the northeast toward San Francisco Bay.
Hydrology		
Surface Water Runoff	Visual observations; Facility personnel	All surface runoff on the site is directly towards the reclamation pond in the eastern corner of the site. The site is completely paved, and no surface runoff leaves the site, enters municipal storm drains, or infiltrates into the ground surface.
Nearest Surface Water Body to the Site	USGS Topographic Map; Visual observations	Pulgas Creek, located approximately 0.3 miles southeast at its nearest point. The creek flows northeast to ultimately discharge to San Francisco Bay.

Table 7: Physical Setting		
Conditions	Source	Description
Flood Plain	FEMA*; Facility personnel	Facility personnel reported no known occurrences of flooding at the site. The site is not located within a 100- or 500-year flood zone.
Wetlands	NWI*; Visual observations	There are no federally-designated wetlands on site. Ramboll did not observe any obvious suspect wetlands during the site visit.
Geology and Hydrogeology		
Presumed Direction of Shallow Groundwater Flow	USGS Topographic Map; Visual observations; Geotracker	Based on the topographic gradient, the proximity of San Francisco Bay, and information from nearby properties, shallow groundwater beneath the site likely flows to the east-northeast.
Depth to Groundwater	GeoTracker	Based on reports available on GeoTracker, groundwater was typically encountered at approximately 10 to 13 feet bgs and equilibrated in groundwater monitoring wells at approximately 5 to 7.5 feet bgs.
On-site Wells	Visual observations; Facility personnel; CalGEM Well Finder; GeoTracker	There are no current production, monitoring, oil and gas, or injection wells on site. Historically there were two monitoring wells on site (MW-1 and MW-1A) that were decommissioned in 2014.
Nearest Groundwater Supply Wells	Environmental database report	One federally registered well, which is designated as a public supply well, is present between one-quarter mile and one half-mile west-northwest of the site.
Geologic Conditions	NCSS*; GeoTracker	According to reports available on GeoTracker, the soil on site consists of fill material to approximately 2 feet bgs, underlain by sandy clay and clay, followed by fine clayey sands. Regional soils are comprised of urban land.
Notes: FEMA = Federal Emergency Management Agency; NCSS = National Cooperative Soil Survey; NWI = National Wetlands Inventory * - Source was provided in the environmental database report.		

5.4 Historical Use Information on the Site and Adjoining Properties

To evaluate the historical uses of the site, Ramboll interviewed facility personnel and, where readily available, reviewed historical sources of information, as identified in Table 8.

Table 8: Historical Information Sources Reviewed	
Source	Historical Source Reference
Interview with current facility personnel	Conducted in 2022.
Interview with former facility personnel / site owner	Contact information for former site owners and occupants was not readily ascertainable.
Fire insurance maps	1950 and 1968, as provided by EDR
Topographic maps	1896, 1899, 1902, 1915, 1939/1940/1943, 1947/1948, 1949, 1953/1956, 1959/1961, 1968, 1973, 1980, 1993, 1997, 2012, 2015, and 2018 as provided by EDR.
Aerial photographs	1946, 1956, 1958, 1963, 1968, 1970, 1974, 1982, 1993, 1998, 2005, 2009, 2012 and 2016, as provided by EDR. Google Earth Imagery available to 2021.
City directory abstracts	1958 to 2017, as provided by EDR.
Building permit report	Coverage not available from EDR.

Based on Ramboll's review of the historical information sources described above, the site was developed with a few small structures and one building by 1946. A railroad line traversed the southwestern portion of the site in the 1947 topographic map. According to the 1950 Sanborn map, the site was occupied by San Carlos Feed and Fuel Co and consisted of three buildings which were used for auto repair, a metal warehouse, and fuel storage. Additional structures included a batch plant and gravel bunker, several storage sheds, a wash house and an oil house. Based on the city directory, Pacific Ready-Mix, Inc began operation at the site by at least 1963. In the 1968 Sanborn map, a second batch plant and a conveyor are present, in addition to a fourth building labeled on the map as metal window assemblage. From the early 1950s to 2016, the site configuration remains similar; the site is paved with four buildings and various structures present. In the 2016 aerial imagery, there are no longer buildings on site, however, the structures including the conveyor and plants remain the same. Aerial imagery from 2021 depicts the site with numerous structures for concrete manufacturing operations, piles of stored materials, and cement mixing trucks present on site. The adjoining and surrounding properties were beginning to be developed in the 1940s. By 1946, some of the adjoining industrial properties were developed with various buildings and the residential areas surrounding the site to the northwest were present as well.

Current and former tenants of the site have engaged in manufacturing of building materials, including concrete and cement manufacturing from the 1960s to present, and window and door manufacturing during the earliest known occupancy. Former occupants include RMC Lonestar (1992 to 2005), Pacific Ready Mix, Inc (1963-1986), Metal Products Inc. (1958) and San Carlos Feed and Fuel Co. (1950 to 1958).

5.5 Jurisdiction

The following agencies have jurisdiction over potential environmentally-related activities at the site, as necessary. Table 9 includes the agency, a point of contact for records requests, the agency address, and the agency telephone number.

Table 9: Jurisdiction			
Agency	Point of Contact	Phone Number	Address
SMCEHD	Jean DeTar	(650) 372-6263	2000 Alameda de las Pulgas, #100 San Mateo, CA 94403
San Carlos/Redwood City Fire Department	No specific point of contact.	(650) 802-4300	600 Elm Street San Carlos, CA 94070
San Carlos Building Department	No specific point of contact.	(650) 802-4261	600 Elm Street San Carlos, CA 94070
California Department of Toxic Substances Control, Berkeley Regional Office	Public Records Coordinator	(510) 540-2122	700 Heinz Avenue #200 Berkeley, CA 94710-2721
San Francisco Regional Water Quality Control Board	Melinda Wong	(510) 622-2430	1515 Clay Street, #1400, Oakland, CA 94612
USEPA, Region 9	Regional Freedom of Information Officer	(415) 947-4251	75 Hawthorne Street, OPA-2, San Francisco, CA 94105

5.6 Document Request

The seller did not provide any documents related to environmental assessments conducted at the site.

5.7 Knowledge of Environmental Proceedings

Ramboll requested information of representatives of the site owner and facility personnel of any proceedings involving the site, such as:

- Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the site.
- Any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the site.
- Any notices from any governmental entity regarding any possible violation of environmental laws or potential liability relating to hazardous substances or petroleum products.

Site representatives indicated that they were unaware of any litigation or open violations with any regulatory agency.

5.7.1 Direction of Groundwater Flow

Based on the topographic gradient, the proximity of San Francisco Bay, shallow groundwater beneath the site likely flows to the east-northeast, which is consistent with a review of properties listed in GeoTracker that are in the vicinity of the site.

5.8 Previous Environmental Assessments

Based on a review of historical site documents and interviews with facility personnel, prior environmental assessment, sampling and UST removal activities have been conducted at the site, as summarized below. Pertinent historical and site-related information contained in the prior reports has been incorporated into other sections of this report.

- **1997 Tank Removal.** In 1997, a 7,500-gallon gasoline UST was removed from the site. Verification soil samples collected from the sidewalls of the tank excavation did not contain detectable levels of target contaminants. Approximately 4,000 gallons of groundwater were pumped from the excavation and disposed off site. Following the tank removal, SMCDEH required RMC Lonestar to install a groundwater monitoring well downgradient of the former UST. The monitoring well was installed in 1998.
- **1998 Tank Removal.** In 1998, a 6,000-gallon diesel UST was removed from the site. The associated fuel dispenser and product piping were removed as well. Soil surrounding the UST was excavated and approximately 10 gallons of product from inside the tank was removed. Groundwater that accumulated within the excavation and two soil samples from the sidewalls of the excavation were collected and analyzed for TPH-d and BTEX. Soil from one of the two sidewalls contained 10 milligrams per kilogram (mg/kg) TPH-d and 0.0007 mg/kg benzene. The other sidewall sample did not contain detect any constituents above laboratory limits. The groundwater sample contained 120,000 µg/L TPH-d and 13 µg /L xylenes. No other analyzed constituents were detected. Following the tank removal, SMCEHD required RMC Lonestar install another groundwater monitoring well downgradient of the former UST. The monitoring well was installed in 1999.
- **1999 to 2013 Site Investigation.** A number of investigations and sampling events took place between 1999 through 2013 in relation to the UST removals described above. In 1999, a subsurface investigation was performed to evaluate residual impacts from the former diesel UST and to install a groundwater monitoring well downgradient of the former UST. The results of the investigation indicated no significant impacts to soil and dissolved phased diesel impacts in groundwater in the area of the former tank. The plume appeared to be limited in extent and TPH-d (4,100 µg /L) was the only detected constituent (BTEX constituents below laboratory detection limits) in the monitoring well that was installed downgradient of the tank. Groundwater monitoring was performed at two wells installed on the site from 2000 to 2013. Groundwater sampling results from the most recent groundwater monitoring report indicate that the well (MW-1) downgradient the former gasoline UST contained 200 µg/l TPH-d, and the well (MW-1A) downgradient the former diesel UST contained 290 µg/l TPH-d and 120 µg/l TPH-g. BTEX was not detected in either monitoring well. In 2013, several soil and groundwater samples were collected in the vicinity of the former gasoline and diesel USTs. Results of the investigation did not show significant petroleum hydrocarbon concentrations in soil and groundwater. Specifically, soil and groundwater samples did contain any analyzed constituents (TPH-g, TPH-d, and BTEX) above laboratory detection limits.
- **2014 Case Closure.** In September 2014, the SMCEHD) issued a case closure letter for the case based on anticipated continuing natural attenuation of residual contaminants left in place, which included maximum concentrations of 120 micrograms per liter (µg/L) TPH-g and 290 µg/L TPH-d.

Concentrations of BTEX were not detected above laboratory reporting limits at that time. The closure letter specified that any changes in land use, or activities that require the removal of soil or groundwater, must be approved by the SMCEHD.

- **February 2022 Site Investigation.** Concurrent to preparation of this Phase I ESA, Ramboll performed a subsurface investigation to evaluate current site conditions. Sampling included the collection of soil, soil vapor, and groundwater samples across the site, with locations selected to assess subsurface conditions in the vicinity of the former USTs and historical auto repair, and based on the long time industrial use of the surrounding area and known groundwater impacts in the vicinity, to evaluate site-wide groundwater for the presence of VOCs. In general, sample results were compared to SFRWQCB ESLs (and for soil, DTSC or USEPA RSLs, and typical background concentrations in the case of arsenic).

Field work was conducted on February 21 and 22, 2022. Soil samples were analyzed for metals, OCPs, TPH-g/d/mo and VOCs, groundwater samples were analyzed for TPH-g/d/mo and VOCs, and soil vapor samples were analyzed for VOCs. Findings of the investigation indicate the following: (1) soil samples did not contain any analyzed constituents above commercial screening criteria; (2) groundwater sample results identified several VOCs above commercial screening criteria based on potential vapor intrusion concerns, with maximum concentrations in two locations along Bransten Road, and no TPH detections above laboratory reporting limits except for low concentrations of TPH-d and TPH-mo at one location); and (3) the soil vapor sample collected and analyzed for VOCs did not contain any constituents above commercial ESLs. PCE concentrations in groundwater samples were detected above vapor intrusion-based ESL of 2.8 µg/L in seven of nine groundwater samples collected, at concentrations ranging from 2.8 to 32 µg/L. The two groundwater samples (REH-GW07 and REH-GW08) collected near Bransten Road contained 20 µg/L and 32 µg/L PCE, respectively. The same two samples contained TCE above the commercial ESL (7.5 µg/L) at 8.7 µg/L and 43 µg/L, respectively.

5.9 Environmental Site Setting

5.9.1 Groundwater Depth

Ramboll encountered first groundwater at approximately six feet bgs during the February 2022 site investigation, with groundwater elevations equilibrating at approximately 5.5 to 8 feet bgs. Based on information reviewed for the site and surrounding area, groundwater has typically been first encountered at approximately 7 to 13 feet bgs, equilibrating at approximately 4.5 to 8 feet bgs.

5.9.2 Potential Contamination

Issues relating to potential on- and off-site contamination are discussed in Section 5.1.

5.9.2.1 Potential On-Site Sources

Several potential on-site sources of impact to site soil and groundwater were identified, including historical industrial site usage and the closed on-site LUST cleanup case. This matter is further discussed in Section 8.

5.9.2.2 Potential Off-Site Sources

Ramboll identified several potential off-site sources including two adjoining properties with groundwater contamination that may have flowed beneath the site. This matter is further discussed in Section 8.

5.9.3 Existing Information Obtained from Reports

UST removal reports (1997 and 1998), investigative reports (1998 to 2001) and periodic groundwater monitoring reports (2001 to 2002) were completed for the site. The scope and results of the reports are addressed above in Section 5.8.

6. SITE RECONNAISSANCE

6.1 Methodology and Limiting Conditions

Ramboll conducted a visit to the site on January 13, 2022. During the site visit, observations of both the interior of the buildings and exterior portions of the site were made to evaluate if any RECs, as defined in Section 2, are present.

6.2 General Site Setting and Observations

Ramboll made observations concerning all the interior and exterior issues specified in Sections 9.4.2 through 9.4.4 of the ASTM E1527-13 Standard. The presence or absence of each issue of environmental interest or concern is noted in Table 10.

6.2.1 Areas Observed

During the site visit, Ramboll observed exterior areas at the site, including public rights-of-way and the exterior of the buildings. Ramboll additionally observed the interior of each building, including office, work, rooftop and storage areas. Summary of Interior and Exterior Observations

Table 10 summarizes Ramboll's observations of the interior and exterior portions of the building units.

Table 10: Summary of Site Reconnaissance Observations			
ASTM Section	Issue	Observation	Comment
Interior and Exterior Issues			
9.4.2.1	Current use(s) of the site.	See Section 3.3	See Section 3.3
9.4.2.2	Past use(s) of the site.	See Section 5.4	See Section 5.4
9.4.2.3	Hazardous substances and petroleum products used, treated, stored, disposed of, or generated on the site in connection with identified present or past uses.	Present	Ramboll observed the following hazardous substances and petroleum products at the site: • 55-gallon drums of used absorbent • 330-gallon tote of Hycrete W1001 waterproofing admixture

Table 10: Summary of Site Reconnaissance Observations

ASTM Section	Issue	Observation	Comment
9.4.2.7	Drums of hazardous substances or petroleum products (five-gallon, 55-gallon or totes).	Present	• 900-gallon tank of AEA-B Air Entraining agent • 1,500-gallon tank of Mid-Range Water Reducer (superplasticizer) • 1,500-gallon tank of High-Range Water Reducer (superplasticizer) • 1,500-gallon tank of Hydration Stabilizer admixture • 1,500-gallon tank of Shrinkage Reducer admixture • 1,500-gallon tank of Accelerator admixture • 1,500-gallon tank of Corrosion Inhibitor admixture • Several gallons of color solution for cement coloration All chemicals were labeled, stored in proper containers, and had secondary containment mechanisms. All chemicals were stored in outdoor areas.
N/A	Biological agents used or stored on site.	Absent	Ramboll did not observe any biological agents stored on site, facility personnel were unaware of any such storage.
9.4.2.9	Unidentified substance containers suspected of containing hazardous substances or petroleum products.	Absent	Ramboll did not observe any unidentified substances or product containers.
9.4.2.8	Hazardous substance and petroleum product containers (not necessarily in connection with identified uses).		
9.4.2.4	Storage tanks: USTs (fill ports, vent pipes, manholes).	Present	According to facility personnel, there was formerly a UST at the site. There was no observable evidence of any additional USTs at the site, nor was there evidence of such (e.g., vent pipes, fill ports, or dispensing equipment) observed by Ramboll during the site visit. According to the environmental database report, the site was on the LUST database. A discussion of the LUST is provided in Section 5.1.1.

Table 10: Summary of Site Reconnaissance Observations

ASTM Section	Issue	Observation	Comment
	Aboveground Storage Tanks (ASTs)	Present	Ramboll observed an 8,000-gallon AST of bio-diesel fuel currently on site. The site formerly operated one AST of unknown capacity containing waste-oil which was removed in 2009.
9.4.2.5	Odors (strong, pungent or noxious).	Absent	Ramboll did not note the presence of odors.
9.4.2.6	Pools of liquid, standing surface water or sumps.	Present	Ramboll observed a small swale filled with water in the western corner of the site, as well as a reclamation pond present in the eastern corner of the site. The swale reportedly fills with water on occasion and the water is pumped into the reclamation pond. The site is graded and designed to prevent stormwater from leaving the site or infiltrating into the subsurface.
9.4.2.10	Polychlorinated biphenyls (PCBs)	Absent	Ramboll observed two-pad mounted transformers and a switchgear present on site. One of the transformers was a dry-type transformer and the other operated using a biodegradable and non-PCB containing oil. No hydraulic equipment was present or reported to be historically present on site.
	Electrical equipment on-site (e.g., transformers, capacitors).		
	Electrical equipment known or likely to contain PCBs.		
	Hydraulic equipment on-site (e.g., elevators, truck dock lifts).		
	Hydraulic equipment known or likely to contain PCBs.		
Interior Issues			
9.4.3.1	Heating/cooling systems.	Present	Ramboll observed an HVAC system and electric heater located in the office building on site.
9.4.3.2	Stains or corrosion on interior floors, walls or ceilings (except for staining from water).	Absent	Ramboll did not observe any staining on the site.

Table 10: Summary of Site Reconnaissance Observations

ASTM Section	Issue	Observation	Comment
9.4.3.3	Floor drains and interior sumps.	Potentially Present	Ramboll observed a storm drain pump in the eastern corner of the site that reportedly is operated by the City of San Carlos. Facility personnel did not have knowledge of its use, and reported that is it not controlled or operated by CEMEX.
Exterior Issues			
9.4.4.1	Pits, ponds or lagoons on site or adjacent properties.	Present	Ramboll observed a reclamation pond in the eastern corner of the site. All runoff or process water on site flows towards the pond, since the site is sloped gently towards the eastern corner. The pond consists of a 4-pond weir system which filters out larger particulate matter in each pond until the water ends up in final pond, where it is pumped out to be reused for cement manufacturing. The pond is paved and impermeable.
9.4.4.2	Stained soil or pavement.	Absent	Ramboll did not observe any staining on pavement or soil.
9.4.4.3	Stressed vegetation (from other than insufficient water).	Absent	Ramboll did not observe evidence of stressed vegetation.
9.4.4.4	On-site solid waste disposal; areas apparently filled or graded by non-natural causes; or mounds or depressions suggesting solid waste disposal.	Present	Ramboll observed piles of aggregate and rock material used for cement manufacturing. Facility personnel reported that the site was graded and paved in 2019 and 2020.
9.4.4.5	Wastewater or other liquid (including storm water) or any discharge into a drain, ditch, underground injection system or stream on or adjacent to the site.	Absent	All process and wastewater is directed into the reclamation pond on site. No water from on site ends up in municipal sewer system.
9.4.4.6	Wells (including dry wells, irrigation wells, injection wells, abandoned wells, or other wells).	Present	No production, oil, or injection wells are present at the site. Historically, two monitoring wells were present on site. Since the site has been paved since the decommissioning of the on-site wells in 2014, there was no surficial evidence of the wells on site.

Table 10: Summary of Site Reconnaissance Observations

ASTM Section	Issue	Observation	Comment
9.4.4.7	Septic systems or cesspools.	Absent	Ramboll did not identify evidence of current or former septic systems or cesspools on site.
Notes: Observations noted in this table and discussed further below are based on information obtained during the site visit and from a review of the sources summarized in Section 4. See the ASTM Standard for a detailed description of the issues included in each referenced ASTM section. Per the ASTM Standard, fluorescent light ballasts likely to contain PCBs are not considered. N/A – Not applicable			

6.3 Compliance Observations

Table 11: Summary of Compliance Observations

Issue	ASTM Section	Observation	Comment
Interior and Exterior Issues			
Current Regulations	N/A	Present	CEMEX stores and generates hazardous substances and waste and are regulated by local regulatory agencies. Facility personnel were unaware of any outstanding regulatory violations, investigations, claims, actions, notifications, or litigation, regarding environmental concerns pertaining to the site.
Leaks/Spills and Potential for Future Leaks/Spills	N/A	Absent	
Storage method and secondary containment of hazardous substances	N/A	Present	Hazardous substances were stored in/or the following: - Secondary containment: - Color Solution 55-gallon drum of used adsorbent - Admixtures - On pavement: - AST containing bio-fuel

7. INTERVIEWS

Ramboll conducted interviews with various facility personnel and requested and reviewed available documentation from government agencies. Information provided during the interviews is summarized throughout the appropriate sections of this report.

7.1 Interviews with Owner's Representative

Ramboll conducted an interview with Grant Cutts, the project manager of Bay Area maintenance at CEMEX. Mr. Cutts has been with the company for 3 years. The owner's representatives indicated that their knowledge of environmental matters related to the site is limited to the information contained in Section 5.8.

7.2 Interview with Site Manager

Mr. Cutts was designated as the "site manager."

7.3 Interviews with Occupants

Mr. Cutts was designated as representing the "site occupant."

7.4 Interviews with Local Government Officials

Ramboll did not believe it was necessary to request an in-person file review at the local regulatory agencies, based on the electronic availability of documents maintained by the agencies.

7.5 Interviews with Others

Ramboll did not conduct additional correspondence or interviews other than those described above.

8. FINDINGS, OPINIONS, AND CONCLUSIONS

8.1 Recognized Environmental Conditions

Ramboll identified the following REC, as defined by the ASTM Standard:

- (1) Chlorinated VOCs in Groundwater Beneath the Site.** Concurrent to this Phase I ESA, Ramboll conducted a soil, soil vapor, and groundwater investigation at the site to evaluate site conditions in relation to the long-time industrial use and known contamination sources in the vicinity of the property, and the former USTs located on site (discussed below). Sampling locations were selected to assess subsurface conditions in the vicinity of the former USTs and historical auto repair and based on the long time industrial use of the surrounding area and known groundwater impacts in the vicinity, to evaluate site-wide groundwater for the presence of VOCs. A separate Phase II report will be issued; findings are summarized herein.

Field work was conducted on February 21 and 22, 2022. Soil samples were analyzed for metals, OCPs, TPH-g/d/mo and VOCs, groundwater samples were analyzed for TPH-g/d/mo and VOCs, and soil vapor samples were analyzed for VOCs. Findings of the investigation indicate the following: (1) soil samples did not contain any analyzed constituents above commercial screening criteria; (2) groundwater samples contained several VOCs above applicable screening criteria and TPH concentrations were generally not detected nor above applicable screening criteria; and (3) the soil vapor sample collected and analyzed for VOCs did not contain any constituents above commercial screening criteria (i.e., SFRWQCB ESLs). PCE concentrations in groundwater samples were detected above the ESL based on potential vapor intrusion concerns (2.8 µg/L) in seven of nine groundwater samples collected and ranged from 2.8 to 32 µg/L, with maximum concentrations observed in two locations along the site boundary at Bransten Road (REH-GW07 and REH-GW08 contained PCE at concentrations of 20 µg/L and 32 µg/L, respectively). The same two samples contained TCE above the vapor intrusion-based ESL (7.5 µg/L) at 8.7 µg/L and 43 µg/L, respectively.

The source of the VOC concentrations identified in groundwater are not clear; there is no known historical use of chlorinated VOCs at the site, and there appears to be some level of contribution from upgradient, off-site sources as well as the potential for impacts from other nearby (i.e., cross-gradient) properties. Based on the findings of the February 2022 investigation, Ramboll currently categorizes this matter as a REC, while also noting that adjacent properties in the cross- and downgradient directions are known sources of chlorinated VOCs in groundwater, at higher concentrations than those that have been detected on site.

8.2 Historical RECs

The following HREC related to historical contamination concerns was identified:

- (2) Residual Soil Contamination from an Underground Storage Tank (UST) Release.** The site is listed with closed status on the CA RGA LUST, LUST and Cortese databases for a release of petroleum hydrocarbons to the soil and groundwater. The site formerly operated two underground storage tanks (USTs): one 7,500-gallon gasoline UST (removed in December 1997) and one 6,000-gallon diesel UST (removed in August 1998). In December 1997, following removal of the 7,500-gallon gasoline UST, associated dispenser island and product piping, approximately 116 cubic yards of impacted soil and approximately 4,000 gallons of potentially impacted groundwater were removed and disposed off site. Similarly, in August 1998, following removal of the 6,000-gallon diesel UST, associated dispenser island and product piping, an unknown quantity of impacted soil was removed. Chemicals of concern at the site have been identified as TPH-g and

TPH-d, and BTEX. Additional investigations have been performed from 1999 through 2013, including the installation of monitoring wells in 2000. On September 18, 2014, the SMCEHD GPP issued a case closure letter for the case based on anticipated continuing natural attenuation of residual contaminants left in place, which included maximum concentrations of 120 micrograms per liter ($\mu\text{g/L}$) TPH-g and 290 $\mu\text{g/L}$ TPH-d (these concentrations are marginally above the most conservative current ESLs based on drinking water use [groundwater is not used on site]). Concentrations of BTEX were not detected above laboratory reporting limits at that time. Further, the results of Ramboll's recent investigation included analysis for TPH and BTEX compounds, and no exceedances of current ESLs were identified in any groundwater samples on site. The closure letter specified that any changes in land use, or activities that require the removal of soil or groundwater, must be approved by the SMCEHD. Based on the prior issuance of no further action by SMCEHD supplemented by the findings of the Ramboll's recent site investigation, Ramboll considers this matter to represent a HREC. Ramboll does not consider the presence of a HREC to represent an ongoing contamination concern to the site.

8.3 De Minimis Conditions

De minimis conditions are those that do not represent a material risk of harm to public health or the environment and that generally would not be the subject of enforcement action if brought to the attention of appropriate governmental agencies. Ramboll did not identify any *de minimis* conditions related to the site.

8.4 Notable Other Finding

In addition, the findings discussed above, the following additional finding related to potential contamination concerns were identified:

(3) Historical Industrial Land Use at the Site and Surrounding Properties. The site was developed for industrial purposes as early as 1950. While current site use does not include the significant use of significant quantities of chemicals including chlorinated solvents (and the current owner has indicated no knowledge of such use), it is possible that historical activities included the use of such chemicals at a time when regulatory scrutiny and regulations were not yet in place. San Carlos Feed and Fuel Co. operated at the site in the 1950s. Sanborn maps during this time identified three buildings that were used for auto repair, a metal warehouse, and fuel storage. Notable other structures included a batch plant, a wash house, and an oil house. The site has operated as a cement manufacturing facility from the 1960's until present. The surrounding properties were developed for commercial and industrial uses by 1950. Notable historic occupancy of the surrounding properties includes an autobody shop, truck maintenance facility, and a sheet metal works operation adjacent to the northwest; paint warehouses, upholstery and mattress manufacturing, and a contractors storage yard adjacent to the southwest; a lumbermill adjacent to the north; and an unmanned fueling station to the southwest; and a dry cleaner, gasoline stations, and automotive operations upgradient and across the highway to the west of the site. Historical operations conducted between the development of the site and surrounding area and the early 1980s predate the enactment of robust environmental regulations related to the handling, storage, and disposal of hazardous chemicals. Several subsurface investigations have identified TPH at the site and surrounding properties, though most appear to be below existing screening criteria. Absent further information regarding the specific nature of historical chemical use, chemical handling practices, and associated wastes at the site and surrounding properties, Ramboll cannot rule out the possibility that inadvertent spills or releases of chemicals or petroleum. Although not considered a REC, Ramboll identifies this as a notable finding, which is

not defined by the ASTM standard. Ramboll uses this term to connote areas of contingent risk that are not clearly defined by the ASTM standard.

8.5 Conclusions

Ramboll has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527 of the site. Except for those identified above, no other RECs have been identified in connection with the site. Any exceptions to, or deletions from, this practice are described in Section 9 of this report.

9. DATA GAPS

The ASTM Standard defines a data gap as “a lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information.”

A data gap is only significant if other information obtained during the ESA, or professional experience, raises reasonable concerns and affects the ability of the environmental professional to identify whether a given issue is a REC. The ASTM Standard requires that the ESA report identify and comment on significant data gaps.

Limiting conditions and deviations to the ASTM Standard for the assessment are discussed below.

- Due to the extended history of the site, it was not possible to interview representatives dating back to the site’s first developed use as early as 1946. However, Ramboll reviewed other historical sources regarding former uses of the site.

None of the exceptions, deletions, deviations, or site reconnaissance limitations noted above are considered to represent significant data gaps.

10. ADDITIONAL (NON-ASTM STANDARD) SERVICES

Ramboll identified the following findings that relate to non-scope considerations (as discussed in Section 2.2), as detailed below:

10.1 Asbestos-Containing Materials

The building at the site was constructed in 2015, after asbestos was generally phased out of use in most building material applications in the 1980s. The building is constructed from shipping containers and does not have insulating materials. However, based on the construction of the non-operative batch plant prior to the 1950s, it is possible that ACM was used historically on this structure. There are no regulatory requirements to remove ACM or evaluate whether building materials contain asbestos, unless the materials are damaged and have the potential to release fibers, or the materials have the potential to be disturbed during renovation or demolition activities. Ramboll did not observe any obviously damaged building or structure materials. A comprehensive ACM survey is required prior to any renovation or demolition activities at the site.

10.2 Cultural and Historic Resources

Ramboll reviewed the NEPASearch™ report provided by EDR (Appendix F), which contains a historical properties map depicting properties on the National Register of Historic Places, the State Historic Places, and Indian Reservations (see Appendix F). Based on the information provided, no cultural or historic sites were identified at the site. Site representatives were not aware of any cultural or historic resources on site.

10.3 Radon

According to the environmental database report, the site is in an area categorized as Zone 2, which has average indoor basement radon concentrations between 2 and 4 pCi/L. The USEPA's continuous exposure limit, the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. The continuous exposure limit applies to residential, not commercial, properties. According to the California Radon database, of 88 properties surveyed in the same zip code as the site (94070), 5 properties had radon levels above the continuous exposure limit. A USEPA survey conducted in the same zip code as the site found that the average radon concentration of a first-floor room at one property was 0.650 pCi/L, below the continuous exposure limit.

The radon survey results presented in the EDR report cannot predict the radon exposure concentration measurement in the structures at the site. The only way to evaluate the actual amount of radon present in a particular structure is to conduct a radon survey in that structure. However, the results reported in the above USEPA radon survey are representative results that could be expected from a survey conducted at other locations and at other times within this same region, which includes the site.

10.4 Endangered Species

Ramboll reviewed the NEPASearch™ report provided by EDR (Appendix F), which specifies areas of occurrence for local threatened and endangered species, as well as sensitive habitats. No natural areas (e.g., Federal lands, Wilderness Preservation, Conservation Easement, Protected Areas, or Critical Land Habitat) are located at the site or within one-eighth mile of the site.

Two California endangered species are identified within one-eighth mile of the site: the Santa Cruz kangaroo rat and the San Francisco garter snake. The state rankings for these species include "critically imperiled" (Santa Cruz kangaroo rat) and "imperiled, very rare" (San Francisco garter snake). According to information from the U.S. Fish and Wildlife Federal Endangered Species List,

numerous threatened or endangered species are listed for San Mateo County and/or the State of California (see Appendix F for complete list). Groups include: amphibians, arachnids, birds, conifers and cycads, crustaceans, ferns and allies, fish, flowering plants, insects, lichens, mammals, reptiles, and snails. Species include (but are not limited to) the Oregon spotted frog, Yuma clapper rail, Vernal pool tadpole shrimp, Steelhead, Vine Hill clarkia, Riparian woodrat, and White Abalone.

10.5 Lead-Based Paint

Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." Based on the construction of the existing building in 2015, it is unlikely that lead-based paints were used on this structure. However, based on the construction of the non-operative batch plant prior to the 1950s, it is possible that lead-based paints were used historically on this structure. Ramboll observed paint to be in poor condition on the non-operated batch plant structure. Facility personnel did not have knowledge of any lead surveys conducted on site.

10.6 Lead in Drinking Water

Ramboll reviewed the City of San Carlos's 2020 Water Quality Report, which evaluated concentrations of several contaminants in local public water supply as required by the USEPA and the State of California (including the California Department of Public Health and State Water Resources Control Board). The associated water supply map indicates that the City of San Carlos supplies the site with water obtained from the San Francisco Public Utilities Commission (SFPUC). Analytical result summaries (for weekly sampling events of regulated and unregulated contaminants) were reported for detected analytes, including pH, hardness, turbidity, disinfection by-product precursors, microbiological agents, fluoride, lead, copper, and various other parameters. According to the report, all results met State and Federal drinking water health standards.

10.7 Regulatory Compliance

Based on the information reviewed on the environmental database report, local agency files, and the EnviroFacts and CalEPA Regulated Site Portal databases (the "compliance databases"), CEMEX maintains environmental permits and is registered as a hazardous waste generator. According to facility personnel and the compliance databases, there are no outstanding violations at the site. Facility personnel were not aware of any contamination concerns, outstanding investigations, claims, actions, notifications, or litigation, regarding environmental concerns pertaining to the site other than the known on-site and off-site impacts discussed further in Section 8.

10.8 Wetlands

Based on maps included in the EDR NEPA Search report (Appendix F), originally obtained from the National Wetland Inventory (NWI), no wetlands are identified at the site. The nearest wetlands are located approximately 300 feet west of the site. No existing water bodies are depicted at or surrounding the site on USGS topographic maps. As there are no on-site water bodies, no Jurisdictional Waters of the United States are located on site.

10.9 VEC Screening

Ramboll conducted a Tier I non-invasive vapor encroachment condition (VEC) screening in accordance with the methodology specified in ASTM International's Standard Practice for Vapor Encroachment Screening on Property Involved in Real Estate Transactions E2600-15. Based on known on-site impacts as discussed in Section 8.1, a VEC does not exist at the site.

Table 11: Vapor Encroachment Condition Evaluation Results

Facility Name/Location	Approximate Distance from Site	VEC Evaluation	REC Evaluation
Closed LUST Sites 1026 Bransten Road (the site), 779, 789, and 803 Old County Road; 1015 Terminal Way; 580, 700, 734, 796, and 888 El Camino Real	Within a radius of 1/3 miles, upgradient of the site.	VEC appears unlikely based on case closure status of the LUST cleanup sites.	Not a REC
Closed CPS-SLIC Sites 1249 San Carlos Avenue	Within a radius of 1/3 miles, upgradient of the site.	VEC appears unlikely based on the relatively minor concentrations of VOCs (specifically PCE and chloroform) in groundwater in the direction of the site and the closed status of the property.	Not a REC
G.N. Renn Inc. 833 Old County Road	Approximately 400 feet south and cross gradient of the site.	VEC appears unlikely based on the cross-gradient nature of the property.	Not a REC
Lovan Trust property 672 Laurel Street	Approximately 1,000 miles west and upgradient of the site.	VEC appears unlikely since VOCs in groundwater are relatively minor and limited to the property.	Not a REC
Caltrain Corridor	Approximately 400 feet west and upgradient of the site.	VEC appears unlikely since soil is the primary media of concern at the portions of the property nearest the site. Groundwater contamination related to this listing is primarily of concern at the South San Francisco Caltrain station, which is located approximately 15 miles north of the site. The case remains open for soil management of future improvement projects that may occur along the transit corridor.	Not a REC

12. ASTM DEFINITIONS

The following definitions are presented in the ASTM Standard:

REC - Recognized Environmental Condition:

The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment.

CREC - Controlled Recognized Environmental Condition:

A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

HREC - Historical Recognized Environmental Condition:

A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

***De minimis* Condition:**

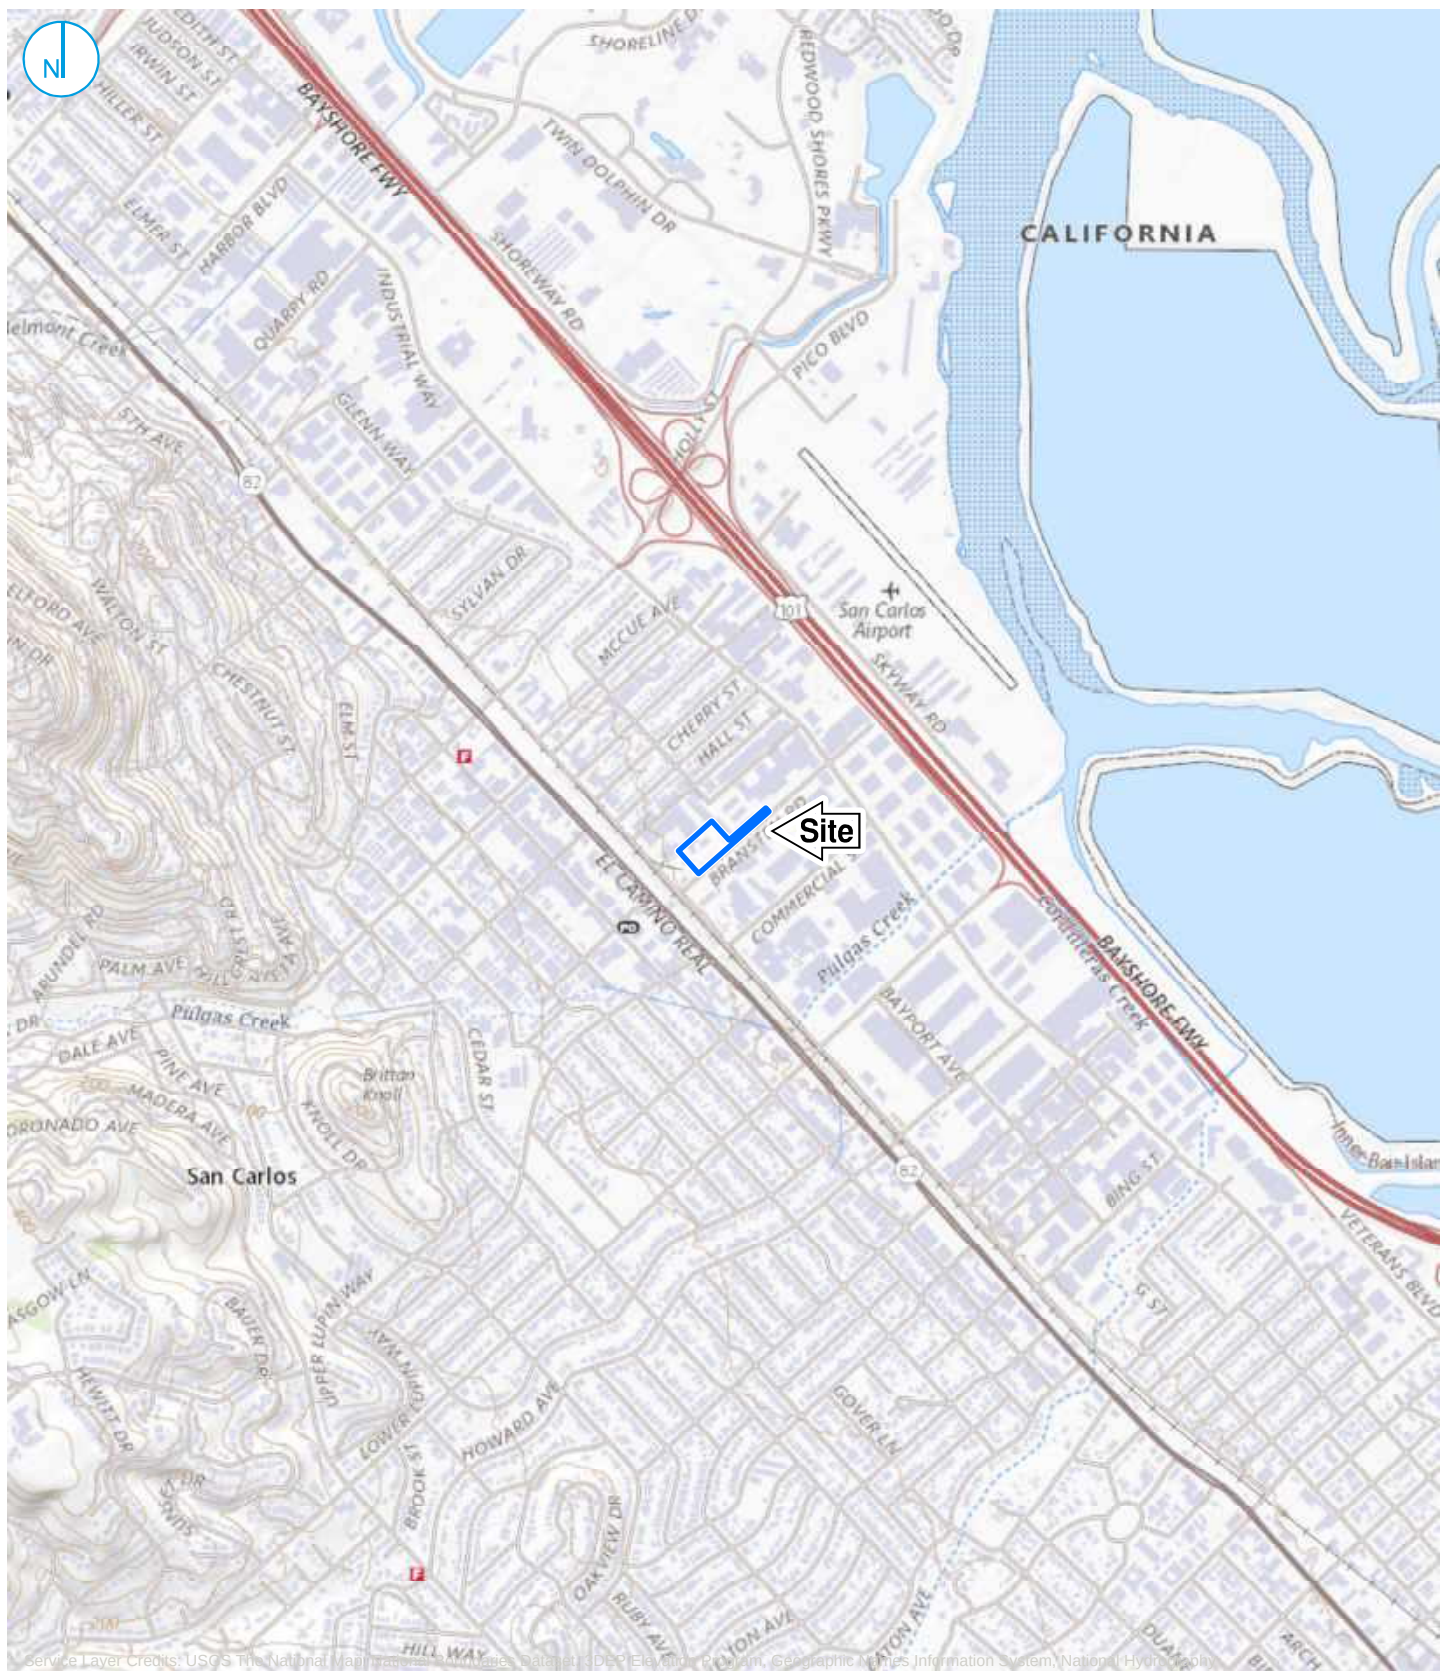

A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

Data Gap / Significant Data Gap:

A lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information. A data gap is significant if other information and/or professional experience raises concerns involving the data gap.

Please note that the term "other finding" is not defined by ASTM; rather, Ramboll uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard.

Photo 14: View of storm drain pump, operated by the City of San Carlos, facing east.

APPENDIX B ENVIRONMENTAL DATABASE REPORT

NOTES ON ENVIRONMENTAL DATABASE REPORT

The third-party provider conducted its searches for the standard environmental record sources and the minimum search distances, as specified by the ASTM Standard. The ASTM Standard uses the terminology “approximate minimum search distance” to refer to the radii searched in the environmental database report.

The third-party provider conducted the search of environmental databases in January 2022. Because the environmental databases themselves are sometimes not updated by the specific regulatory agencies for periods of up to one year or more (depending on the database and the state), the database search conducted herein will not necessarily list any facility or site for which an environmental investigation/listing has been initiated subsequent to the last update.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 10/20/2021 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 09/13/2021 has revealed that there are 4 CORRACTS sites within approximately 1 mile of the target property.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 09/13/2021 has revealed that there are 3 RCRA-TSDF sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 7 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 27 RCRA-SQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EPA ID:: CAT080032915

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 09/13/2021 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the target property.

Lists of state- and tribal (Superfund) equivalent sites

CA RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the CA RESPONSE list, as provided by EDR, has revealed that there are 2 CA RESPONSE sites within approximately 1 mile of the target property.

Lists of state- and tribal hazardous waste facilities

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 07/22/2021 has revealed that there

EXECUTIVE SUMMARY

are 20 CA ENVIROSTOR sites within approximately 1 mile of the target property.

CA CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA CPS-SLIC list, as provided by EDR, has revealed that there are 21 CA CPS-SLIC sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

CA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the CA UST list, as provided by EDR, has revealed that there are 4 CA UST sites within approximately 0.25 miles of the target property.

Local Lists of Hazardous waste / Contaminated Sites

CA HIST Cal-Sites: Formerly known as ASPIS, this database contains both known and potential hazardous substance sites. The source is the California Department of Toxic Substance Control. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

A review of the CA HIST Cal-Sites list, as provided by EDR, and dated 08/08/2005 has revealed that there are 2 CA HIST Cal-Sites sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Local Lists of Registered Storage Tanks

CA SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the CA SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 26 CA SWEEPS UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2021 has revealed that there are 111 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 05/05/2021 has revealed that there are 5 FINDS sites within approximately 0.001 miles of the target property.

EXECUTIVE SUMMARY

CA DRYCLEANERS: A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial; garment pressing and cleaners' agents; linen supply; coin-operated laundries and cleaning; drycleaning plants except rugs; carpet and upholster cleaning; industrial launderers; laundry and garment services.

A review of the CA DRYCLEANERS list, as provided by EDR, has revealed that there is 1 CA DRYCLEANERS site within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
JIN'S CLEANER Database: DRYCLEANERS, Date of Government Version: 08/27/2021 EPA Id: CAD981632334	765 LAUREL	WSW 1/8 - 1/4 (0.147 mi.)	N252	1204

CA EMI: Toxics and criteria pollutant emissions data collected by the ARB and local air pollution agencies

A review of the CA EMI list, as provided by EDR, and dated 12/31/2019 has revealed that there is 1 CA EMI site within approximately 0.001 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
CITY OF SAN CARLOS - Facility Id: 108501	1000 BRANSTEN RD	0 - 1/8 (0.000 mi.)	B23	134

CA HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the CA HAZNET list, as provided by EDR, and dated 12/31/2019 has revealed that there are 2 CA HAZNET sites within approximately 0.001 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 10 EDR Hist Auto sites within approximately 0.25 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 9 EDR Hist Cleaner sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR RECOVERED GOVERNMENT ARCHIVES

Exclusive Recovered Govt. Archives

CA RGA LUST: The EDR Recovered Government Archive Leaking Underground Storage Tank database provides a list of LUST incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the State Water Resources Control Board in California.

A review of the CA RGA LUST list, as provided by EDR, has revealed that there is 1 CA RGA LUST site within approximately 0.001 miles of the target property.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

CERS:

Name: CEMEX
Address: 1026 BRANSTEN RD
City,State,Zip: SAN CARLOS, CA 94070
Site ID: 17493
CERS ID: 10063699
CERS Description: Chemical Storage Facilities

Violations:

Site ID: 17493
Site Name: CEMEX
Violation Date: 02-18-2020
Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)

Violation Description: Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.

Violation Notes: Returned to compliance on 03/10/2020. Obtain a copy of the final manifest for the disposal of used oil in December 2019. The manifest number is 021245406JJK. Provide documentation to SMCUPA within 30 days.

Violation Division: San Mateo County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 17493

Violation Date: 11-12-2015
Citation: HSC 6.95 25508.1(f) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(f)

Violation Description: Failure to electronically update the business plan within 30 days of a substantial change.

Violation Notes: Returned to compliance on 12/10/2015. Site map and chemical inventory are not up to date. All HMBP changes must be updated within 30 days. Update site map within 30 days and submit to CERS.

Violation Division: San Mateo County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Site ID: 17493
Site Name: CEMEX
Violation Date: 11-09-2017
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)

Violation Description: Failure to include in the SPCC Plan an adequate facility diagram, or no facility diagram included. The facility diagram is not required on a Tier I qualified facility SPCC Plan.

Violation Notes: Returned to compliance on 12/11/2017. Facility diagram was updated two years ago in CERS for the HMBP, but there is no updated map on site. Additionally, there is more construction happening at this time. Update the facility map to include the new plant and ensure a copy is placed on site in the facility SPCC binder.

Environmental Interest/Information System:

AIR EMISSIONS CLASSIFICATION UNKNOWN

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the

Name: SAN CARLOS READY MIX
Address: 1026 BRANSTEN RD
City,State,Zip: SAN CARLOS, CA 94070
Site ID: 541588
CERS ID: 254436
CERS Description: Industrial Facility Storm Water

Evaluation:

Eval General Type: Compliance Evaluation Inspection
Eval Date: 11-01-2019
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: The facility was in Level 1 status for pH during the 2015-2016 reporting year and submitted a Level 1 ERA Report for pH in 2016, but has not submitted any subsequent stormwater samples from Qualifying Storm Events (QSEs). The facility's Annual Reports after 2016 state that no samples were collected because no QSEs occurred during the facility's operating hours. Devender N. and I met with Ms. Saira Soriano (Ph. # 530-717-7835), Environmental Manager, and Mr. Jim Hembree, Plant Manager, to review the facility's SWPPP and perform an inspection. The facility is in the process of repaving and regrading

the entire site to contain stormwater and prevent offsite discharge. Ms. Soriano and Mr. Hembree agreed to provide the Water Board with documentation of rainfall records and photos of discharge locations during rain events for the years after the 2016 Level 1 ERA Report was submitted, and also to upload this documentation to SMARTS. The Water Board will issue a formal written report of the inspection and upload it to SMARTS.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Description: "Failure to conduct secondary containment testing, or one or more of the following requirements: Perform the test of the secondary containment system upon installation, within six months of installation and every 36 months thereafter. Perform the test of a secondary containment component within 30 days of a repair or discontinuing vacuum, pressure or hydrostatic monitoring. Use a procedure that demonstrates the system works as well as at installation. Use applicable manufacturer guidelines, industry codes, engineering standard, or professional engineer approval. Performed by a certified service technician. Maintain records of secondary containment testing for 36 months."

Violation Notes: Returned to compliance on 11/27/2018. The secondary containment test was due in October 2018 and is currently about one week overdue. Complete the secondary containment testing and submit the test report to the CUPA within 30 days.

alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.

Violation Notes: Returned to compliance on 11/27/2018. DO inspection reports are not available for September and October 2018. Complete an inspection report and submit a copy of each report to the CUPA within 30 days.

Environmental Interest/Information System:

AIR EMISSIONS CLASSIFICATION UNKNOWN
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
US National Pollutant Discharge Elimination System (NPDES) module of
the Compliance Information System (ICIS) tracks surface water permits
issued under the Clean Water Act. Under NPDES, all facilities that
discharge pollutants from any point source into waters of the United
States are required to obtain a permit. The permit will likely contain
limits on what can be discharged, impose monitoring and reporting
requirements, and include other provisions to ensure that the
discharge does not adversely affect water quality.

Violation Description: 6.95, Section(s) 25505(a)(4)
Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.

Violation Notes: Returned to compliance on 02/11/2020. It's unclear if all employees including administrative staff received hazardous materials safety and emergency procedures training in 2019. Provide hazardous materials safety and emergency procedures training to all employees during new employee orientation and annually thereafter. Submit a copy of the training record to the CUPA within 30 days to show that all employees received the required training.

Case Type: Cleanup Program Site
Case Worker: BG
Local Agency: SAN MATEO COUNTY LOP
RB Case Number: Not reported
File Location: Not reported

Potential Media Affected: Aquifer used for drinking water supply, Soil, Soil Vapor
Potential Contaminants of Concern: Tetrachloroethylene (PCE)

Site History: Extracted from Green Environment's December 8, 2009 Expanded Soil Investigation, San Mateo County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report. The subject property is located in a commercial/industrial area of San Carlos on the south side of Bransten Road, between Old County Road to the west and Industrial Road to the east. The subject property consists of one (1) commercial parcel (APN 046-133-100) of approximately 48,400 square feet which appears to slope slightly to the north. An asphalt-paved driveway which is also used as tenant parking separates two (2) existing single story commercial warehouse buildings of approximately 13,500 and 12,150 square feet, identified as 1007 and 1011 Bransten Road, respectively. During the period November 2008 through August 2009, GEI completed a Phase I environmental site assessment, two (2) subsurface investigations and an indoor air investigation at the subject property. The subject property history is detailed in GEIs Expanded Site Investigation. This report also documents the second subsurface investigation completed by GEI at the subject property. The subsurface investigations discovered elevated concentrations of diesel to oil-range petroleum hydrocarbons, lead and cadmium in soils beneath the concrete floor along the eastern edge of the subject property in the 1007 Bransten Road building. The diesel to oil-range petroleum hydrocarbons, cadmium and lead were detected in some soil samples at concentrations exceeding Regional Water Quality Control Board (RWQCB) Environmental Screening Levels (ESLs) for both residential and commercial/industrial soils, independent of whether groundwater IS or IS NOT a potential source of drinking water. Lead was detected in a soil sample at a concentration exceeding California criteria for hazardous waste. The impacted soils were found at depths just below the approximate two (2) feet of fill placed prior to construction of the 1007 Bransten Road building, to a depth of no deeper than approximately eight (8) feet below top surface (bts). The lateral extent of significantly impacted soils in a westerly

direction appeared to be not greater than approximately 20 feet westerly from the eastern wall of the 1007 Bransten Road building. The lateral extent of impacted soils in easterly, southerly and northerly directions had not been determined. The subsurface investigations also discovered soil impacted primarily with tetrachloroethylene (PCE) at concentrations exceeding RWQCB ESLs for both residential and commercial/industrial land use beneath a concrete and asphalt surfaced area on the west side interior and exterior of Unit F of the 1007 Bransten Road building. The lateral extent of significantly impacted soils had been defined by GEI to the east, south and west, but not to the north. Based upon GEI's findings and conclusions, GEI recommended further characterization of soils in the 1007 Bransten Road building to determine the full lateral extent of the significant diesel to oil-range petroleum hydrocarbons, cadmium, lead and PCE-impacted soils on the subject property.

Environmental Interest/Information System:

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violations:

Site ID: 393719
Site Name: GC LUBRICANTS CO
Violation Date: 04-25-2018
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violation Notes: Returned to compliance on 04/25/2018. Seven 55-gallon drums of hazardous waste were either not labeled or the labels were missing information such as the accumulation start date. Business corrected label violations during the inspection and will dispose of existing hazardous waste located in the southeast corner of the outdoor yard within 30 days.

Violation Date: 07-16-2020
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violation Notes: Returned to compliance on 07/16/2020. Hazardous waste label missing the accumulation start date for one 55-gallon drum containing an oil/water mixture stored inside building. The accumulation start date was added to the label during the inspection and this violation was corrected. No further action required.

Violation Date: 07-16-2020
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 08/07/2020. Several reported hazardous materials are liquids reported in pounds. Revise the storage amount and unit of measure for each hazardous material with an incorrect storage amount and/or unit of measure and submit revisions within 30 days.
Violation Division: San Mateo County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Site ID: 393719
Site Name: GC LUBRICANTS CO
Violation Date: 01-07-2016
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description: Failure to comply with all of the following requirements: 1. Failure to conduct inspections and tests in accordance with written procedures that you or a certifying engineer have developed for the facility. 2. Failure to sign written procedures and/or a record of inspections and/or customary business records by the appropriate supervisor or inspector. 3. Failure to keep written procedures and/or a record of inspections and/or customary business records with the plan. AND 4. Failure to maintain written procedures and/or a record of inspections and/or customary business records for three years.
Violation Notes: Returned to compliance on 01/15/2016. SPCC plan indicates that inspections should be performed weekly. Facility documents monthly. Document inspections weekly and submit proof of corrective action to the County within 30 days.
Violation Division: San Mateo County Environmental Health
Violation Program: APSA
Violation Source: CERS

Site ID: 393719
Site Name: GC LUBRICANTS CO
Violation Date: 04-25-2018
Citation: HSC 6.67 25270.4.5 (a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5 (a)
Violation Description: Failure to complete a review and evaluation of the SPCC Plan at least once every five years, document the completion of the review, and sign a statement as to whether the SPCC Plan will be amended.
Violation Notes: Returned to compliance on 05/09/2018. Current SPCC Plan is dated November 2011 and has not been reviewed and evaluated since the SPCC Plan was completed in 2011. Conduct a five year review and evaluation of the existing SPCC Plan to determine if amendments are needed. If technical amendments are required, these amendments must be certified by a professional engineer.

Quarterly Update: QUARTERLY UPDATE: April 2017 -June 2017 The post closure permit application is awaiting the results of the groundwater evaluation of the co-located corrective action involving the GC Lubricants
https://www.envirostor.dtsc.ca.gov/public/profile_report.asp?global_id=80001427 BACKGROUND In 1981, California Oil Recyclers Inc. (CORI) leased a portion of the property at 977 Bransten Road, San Carlos,

from G-C Lubricants, Inc. CORI set up operation to handle waste oil at the site and operated at the site from 1981 until 1987. The entire property is owned by G-C Lubricants Inc. (G-C), whose operations involve used oil blending and packaging operation in a building next to the CORI operation. G-C still continues to operate at the site in a facility adjacent to the former CORI site. In 1984, CORI submitted an application for a permit as a hazardous waste operation and is subject to RCRA Closure. The first closure plan was submitted in late 1987. CORI was never formally permitted nor received Interim Status Document. However, Department of Toxic Substances Control (DTSC) public noticed the draft closure plan in 1996. Site characterization revealed soils impacted with Total Petroleum Hydrocarbons (TPH), Volatile Organic Compounds (VOC) and Polychlorinated biphenyls (PCB). Groundwater is present at three distinct levels with various amounts of impacts from VOCs, metals and low hits of PCBs. Due to the degree of soil contamination, a plan was approved to cap the area of the CORI operation to prevent further intrusion of contaminants into groundwater. DTSC approved the closure plan for the cap in 1999. Subsequently, requests were made to alter the design of the cap to accommodate buildings, but these were rejected. The cap design as approved and installed at the former CORI site does not allow for buildings but does allow for truck parking. The cap was installed and the completion report was submitted in March 2005; and approved by DTSC in June 2005.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Quarterly Update: BACKGROUND: G-C Lubricants Inc. (G-C), continues to operate a lubricating oil packaging facility from a building at 977 Bransten Road, San Carlos, California. The entire property is owned by G-C, and had leased a portion of their property to California Oil Recyclers Inc. (CORI) which operated at the site from 1981 to 1987. Since then, former CORI operating area has been capped and closure was approved by DTSC on June 30, 2005; and CORI has applied for a Post-Closure Permit. Although CORI operated as a Hazardous Waste Facility on the same

property, G-C Lubricants continues to operate as a generator of primarily waste oil and water separation sludge as a by-product of operations. Since G-C Lubricants is regulated as a generator and never had a Hazardous Waste Facility Permit, the G-C Lubricants was determined to be Administratively Closed. Substantial site characterization work has been completed at this site, including groundwater sampling and soil gas Studies as part of the site investigations for the closure of former CORI facility. These studies revealed that soil contamination exists under the G-C building and further investigation is needed to determine the nature and extent of any release of hazardous waste or hazardous waste constituents to the subsurface of the property; and in the groundwater. Soil and Groundwater: Soil boring, groundwater monitoring, and soil gas data indicate significant concentrations of volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and Polychlorinated biphenyls (PCBs) under the G-C building. The soil and groundwater data also indicates that the VOC and SVOC plumes below and downgradient of the site emanate from the G-C Lubricants building. Potential Indoor Air Impacts: VOCs and SVOCs in the subsurface soils and groundwater under the G-C Lubricants? building and under buildings downgradient of the G-C Lubricants? building present a potential indoor air threat to the workers in those buildings. Indoor air sampling has been conducted and the date will be use

Comments: 2011 Second Semi-Annual Groundwater Monitoring Report

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 02/11/2013
Comments: 2012 First Semi-Annual Groundwater Monitoring Report. COCs at the site are volatile organic compounds (VOCs), which are primarily chlorinated ethenes, 1,4-dioxane, and total petroleum hydrocarbons (TPH) in the diesel range. The chlorinated ethenes include tetrachloroethene (PCE), trichloroethene (TCE), dichloroethenes (DCE) and vinyl chloride (VC). The chlorinated ethenes in groundwater occur in two main plumes that merge downgradient. The comingled plumes have traveled approximately 900 hundred feet downgradient in a northeasterly direction. Most wells show a consistent concentration trend (i.e., variable within a range for all sampling results). Some of the wells show either an increasing trend or decreasing trend chlorinated ethenes.

Completed Date: 12/08/2016
Comments: Regular semi-annual gw monitoring report. Approval letter requested the submittal of a figure missing from the document, this figure was submitted on 12/8/2016.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 12/15/2012
Comments: provides estimate of DTSC oversight cost for 2014-2015 FY

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 03/21/2013
Comments: The Monitoring Well Installation Report addresses the December 2012 installation of 5 new monitoring wells. The monitoring wells consisted of two well pairs screened in the upper and middle water-bearing zones and a fifth well screened in the upper water-bearing zone. The purpose of the new wells is to further investigate downgradient from the G-C Lubricants source area and to further differentiate between G-C Lubricants and other groundwater plumes.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: RFI Workplan
Completed Date: 05/09/2014
Comments: RFI workplan and Current Conditions Report for both GC Lubricants and California Oil Recyclers, Inc. Scope of investigation is to close groundwater data gaps related to CORI groundwater plume.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: RFI Workplan Addendum
Completed Date: 08/11/2014
Comments: This workplan is for grab groundwater samples and based on Membrane Interface Probe (MIP) data collected as the first phase of field work. The groundwater investigation for the GC lubricant and California Oil Recyclers (CORI) is using a Triade approach and the report and workplan is based on MIP data. Grab groundwater sample collection is the second phase and a monitoring wells is planned for a later phase.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 04/25/2018
Comments: The completed interim measures include the excavation of contaminated soil at 941 Bransten Road (the adjacent property, adjacent to and downgradient of the GC Lubricants Lubricants building located at 977 Bransten Road). GC Lubricant s contractor removed and disposed of off-site approximately 1,250 tons of chlorinated volatile organic compounds contaminated soil. To enhance reductive dechlorination in groundwater, GC-Lubricant contractors applied 800 pounds of 3-D Microemulsion to the base and sidewalls of the of the open excavation. Not reported

Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)

Violation Description: Failure to complete and electronically submit a site map with all required content.

Violation Notes: Returned to compliance on 08/13/2020. Evacuation assembly area shown on site map from 2018 HMBP is located on GC Lubricants parking lot. Revise site map as needed and submit with the revised HMBP to CERS within 30 days.

Violation Division: San Mateo County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Site ID: 441060
Site Name: HARBOR READY MIX
Violation Date: 02-27-2020
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173

Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.

Violation Notes: Returned to compliance on 02/27/2020. One 55-gallon drum of waste oil was not closed and no waste oil transfer activities were in progress. Business contact closed this container during the inspection and this violation was corrected.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERS Description: Chemical Storage Facilities

Violations:
Site ID: 136344
Site Name: MOREY MAINTENANCE
Violation Date: 02-28-2018
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 02/28/2018. All hazardous waste must be disposed of within 180 days of the initial date of generation for each type hazardous waste. Waste oil disposal occurs within this time period. Waste oil filters can be stored on site for up to one year. Waste coolant is currently overdue and appears to have been accumulating since 2016. Dispose of existing waste coolant within 30 days and every 180 days from the initial waste coolant accumulation start date thereafter.
Violation Division: San Mateo County Environmental Health

Site History: Extracted from Golden Gate Environmental's May 9, 2008 Case Closure Summary Report, San Mateo County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report. The subject property is located at the southeast corner of the intersection of Old County Road with Bransten Road in San Carlos, California (San Mateo County). The Site is located approximately 0.4 mile southwest of State Highway 101 and approximately 0.7 mile west of the San Francisco Bay. The property is

S104494445

approximately 6,000 square feet (0.14 acre) in area and is owned by the Rae Hansen Trust (San Mateo County Assessor Parcel 046-135-010). Surface elevation is between 16 and 17 feet above mean sea level based on a wellhead elevation survey. The site is currently leased to Garden Supply for a retail sales facility specializing in garden and landscaping materials. Garden Supply also currently leases the adjacent property on the southeast (833 Old County Road) for a secondary storage facility (formerly G.N. Renn Inc. Petroleum Products - a CRWQCB Open SLIC Site). The CalTrain railroad right-of-way lies approximately 50 feet southwest across Old County Road. The Site and surrounding parcels are used for commercial and light-industrial purposes. A rectangular commercial structure (approximately 5,850 square feet) sits on the southeast corner of the subject property. An outdoor covered storage space is adjacent to the northeast side of the building. The building is utilized for office and showroom space with warehouse storage landscaping groundcover material, topsoil and rock masonry contained in large cinderblock enclosures on a concrete slab. The property is surrounded by a cyclone/wood slat fence with gated entrances located along both the Old County Road and Bransten Street frontages. In July 1997, an environmental contractor called HK2 Inc. / SEMCO (SEMCO) removed one 750-gallon underground storage tank (UST). In their tank removal report, SEMCO indicates the UST may have previously stored gasoline, diesel or kerosene fuel until 1996. The fuel dispenser was located adjacent to the UST on the northeast. SEMCO described the UST as a single-walled steel vessel containing about 35 gallons of residual fuel product. The bottom of the UST was measured at 6.5 feet below grade. The UST was observed to be corroded with several holes. The UST was in contact with native soil that was discolored with a very strong hydrocarbon odor beneath the northwest end of the UST (sample T2 at 8.5 feet). Two soil samples collected beneath the northwest and southeast ends of the UST at approximately 8.5 feet below grade (fbg) contained a maximum of 191 mg/kg total petroleum hydrocarbons (TPH) as gasoline (TPH-G), 3,700 mg/kg TPH as diesel (TPH-D), 0.034 mg/kg benzene, and 14 mg/kg of lead. The laboratory indicated that based on the soil sample chromatogram - the TPH as diesel result matched a weathered gasoline pattern. The SEMCO report indicates groundwater was encountered at a depth of 10 feet below grade. However, no soil or groundwater samples are reported in the SEMCO report at a depth of 10 feet. SEMCO used the stockpile of excavated soil to back fill the UST cavity between 3 and 6.5 feet bsg. The balance of the excavation from surface to 3 feet was backfilled with imported class II base material. Subsequently, laboratory analysis of the composite soil sample collected from the soil stockpile revealed concentrations of 180 mg/kg TPH-G, 6,300 mg/kg TPH-D (chromatogram matched gasoline pattern), 0.015 mg/kg benzene, and 43 mg/kg of lead. Based on the results of the UST confirmation soil sampling, the SMCHSA-GPP in their letter dated April 30, 1998, requested an assessment of the extent of hydrocarbon-affected soil at the former UST location and clean-up of any contamination as appropriate. On June 8, 1998, SEMCO submitted their work plan to the SMCHSA-GPP, which was approved on June 15, 1998. In December 1998 and January 1999, SEMCO drilled four exploratory soil borings in the immediate area of the former UST. SEMCO completed boring B1 as a 2-inch groundwater monitoring well (MW-1). Well MW-1 was installed within the footprint of the former UST excavation limits in the contaminated stockpile soil used to backfill the UST excavation. SEMCO does not appear to have recovered

soil samples from the back fill between 3 and 6.5 feet below grade during the drilling of boring B1. Discrete soil samples collected in borings B2, B3 and B4 between 4 and 14 fbg contained detectable concentrations of TPH-G ranging between 6 and 60 mg/kg and benzene concentrations ranging between 0.02 and 0.51 mg/kg. The soil sample collected in B2 at 6 feet below grade was olive gray, sandy, clayey silt with a specific gravity (solids) of 2.7 and an organic content of 1.6%. Grab groundwater samples collected in exploratory borings B2 thru B4 contained a maximum of 8,400 micrograms per liter (μg/l) TPH-G, 1 μg/l benzene and 18 μg/l methyl tertiary butyl ether (MTBE). The groundwater sample collected in MW-1 (B1) on January 7, 1999, contained 1,900 μg/l of TPH-G, 12 μg/l of benzene, 55 μg/l of MTBE, and 730,000 μg/l total dissolved solids. The estimated groundwater flow and hydraulic gradient calculated across the site was directed 36% east of north at approximately 0.033 foot per foot (ft/ft) On April 20, 1999, SEMCO returned to the Site and measured the depth to water in MW-1 using an oil/water interface probe. Approximately 0.125 feet (1.5 inches) of free product was detected in well MW-1. No groundwater samples were collected due to the presence of free product in MW-1. Based on the findings of the initial site characterization, the SMCHSA-GPP in a letter dated July 26, 1999, requested a work plan to further define the lateral and vertical extent of soil and groundwater contamination at the Site. On November 29, 1999, SEMCO submitted their second work plan proposing additional site characterization activities, which was approved by the SMCHSA-GPP in a letter dated December 2, 1999. In this letter, the SMCHSA-GPP requested the removal of free product from well MW-1 on a monthly basis. During May to June 2000, North State Environmental (NSE) bailed about a gallon of oily water from MW-1. Groundwater samples were not collected during either event. Additional details are presented in NSEs June 8, 2000 Letter Report of Interim Groundwater Remediation Activities. In June 2000, NSE implemented the approved November 1999 work plan by drilling five additional exploratory soil borings in the vicinity of the former UST. NSE recovered grab groundwater samples and converted three of the soil borings to 2-inch diameter monitor wells labeled MW-2 (B5), MW-3 (B8), and MW-4 (B9). Grab groundwater samples collected in B6 and B7 contained a maximum of 6,400 μg/l of TPH-G and 13 μg/l of benzene. The representative groundwater sample collected in well MW-1 on June 28, 2000 contained 530 μg/l of TPH-G, 10 μg/l of benzene, and 25 μg/l of MTBE. An oil-absorbent sock was placed in well MW-1 to absorb any free product on the groundwater. Between October 2000 and April 2001, NSE conducted three additional quarterly episodes of groundwater monitoring and sampling activities at the subject property. Groundwater samples collected in MW-1 contained 620, 470, and 430 μg/l TPH-g, respectively, and 2, 4, and 4 μg/l of benzene, respectively. Each sample also contained approximately 12 μg/l of MTBE as confirmed by EPA Method 8260. The groundwater samples collected in MW-4 located down gradient of MW-1 contained 53, 160, and 190 μg/l of TPH-G, respectively, with benzene concentrations ranging between 3 and 7 μg/l. TPH-G, BTEX, and fuel oxygenate concentrations measured in MW-2 and MW-3 during these events were either insignificant or below respective laboratory Quarterly Groundwater Monitoring and Sampling Activities. The SMCHSA-GPP in a letter dated July 31, 2001, requested an additional three quarters of groundwater monitoring and sampling be conducted at the site. The January and April 2001 monitoring

GARDEN SUPPLY (Continued)

S104494445

events were the first and second of the additional quarterly sampling. The Third Quarter 2001 monitoring and sampling event was apparently not performed. In December 2001, Hansen & Kellogg contracted California Environmental Consulting (CEC) to conduct the Fourth Quarter 2001 groundwater monitoring activities. Fluid-level monitoring data and analytical results of groundwater samples recorded in January 2001 are summarized in CECs March 8, 2002 Report of Fourth Quarter 2001 Groundwater Sampling Activities. Based on the findings of the Fourth Quarter 2001 sampling activities, the SMCHSA-GPP in letters dated April 24 and May 21, 2002, requested an additional work plan to remove the residual free product in MW-1 and collect a confirmation sample from the well prior to case closure evaluation. On August 5, 2002, CEC submitted their Work Plan for Free Product Removal and Groundwater Sampling Activities to the SMCHSA-GPP for review and approval. In general, the work plan proposed purging 250 gallons of groundwater with free product from MW-1 and subsequently collecting a groundwater sample from the well. In their review, the SMCHSA-GPP indicated that a low-flow purge system should be utilized. In October 2002, CEC measured 5 inches (0.42 foot) of free product on the groundwater in well MW-1. CEC removed approximately 125 gallons of groundwater and product using a peristaltic pump system into 55-gallon drums. CEC returned to the site through January 2003 to monitor the free product thickness in MW-1. Based on the continued presence of free-phase product (0.27 foot) reported in MW-1, CEC recommended additional free product removal using a Keck SpOILer active product recovery skimmer. Additional details are in CECs March 10, 2003 Project Status Report- Free Product Removal and Groundwater Monitoring Activities. The SMCHSA-GPP in their letter dated March 21, 2003, approved the proposed oil skimmer activities. In May 2003, CEC and NSE conducted fluid-level monitoring in onsite wells and constructed the product recovery skimmer system in well MW-1. About 0.29 foot (3.5 inches) of product was measured on the surface of the groundwater in well MW-1. No measurable product was detected in MW-2 through MW-4. Between May 21 and August 7, 2003, free-phase product thickness measured in MW-1 decreased from approximately 0.29 foot (3.5 inches) to 0.04 foot (0.48 inch). Additional details are in CECs October 17, 2003 Project Status Report- Free Product Removal and Groundwater Monitoring Activities. Between September 18, 2003 and April 22, 2004, free-phase product thickness measured in MW-1 decreased from approximately 0.03 foot (0.36 inch) to 0.005 foot (0.06 inch). Additional details are in CECs May 14, 2004, Project Status Report - Free Product Removal and Groundwater Monitoring Activities. In order to evaluate the effectiveness of the product removal activities, CEC recommended that one additional quarterly monitoring event be conducted in MW-1 through MW-4. Based on the findings of the May 14, 2004, Project Status Report, the SMCHSA-GPP in a letter dated May 26, 2004, approved the recommended groundwater sampling event. The SMCHSA-GPP also requested the following: 1) during the sampling event remove any separate phase petroleum product from MW-1 and purge all wells using low flow purging techniques, 2) survey all monitor wellhead elevations and coordinate locations pursuant to State Geotracker guidelines, 3) upload all relevant project data to the Geotracker database, 4) prepare a case closure summary report, incorporating all elements of a site conceptual model, and 5) perform a risk evaluation for all constituents of concern using residential exposure criteria. On June 30, 2004, Virgil Chavez Land Surveying (PLS 6323), surveyed

the wellhead elevations and latitude, longitude, and coordinate locations of each existing monitor well. The benchmark used for the survey was a City of Redwood City monument #126, with an elevation of 23.40 feet (NGVD 29). Elevations were surveyed to 0.01-foot accuracy and latitude, longitude, and coordinate locations of each well were surveyed to sub-meter accuracy (NAD 83). On June 14, 2004, in general accordance with the SMCHSA-GPPs May 26, 2004 letter, CEC performed Second Quarter 2004 groundwater monitoring and sampling activities at the Site. Only a trace amount of free-phase product was observed on the groundwater in MW-1. CEC then collected a groundwater sample from each well and submitted the samples under chain of custody protocol to North State Laboratory for analysis of TPH-G, BTEX, MTBE, VOCs and Fuel Oxygenates. A summary of the June 2004 monitoring and sampling activities are presented in the Golden Gate Environmental, Inc. (GGE) groundwater monitoring report dated February 2008. On November 27, 2007, GGE conducted an additional groundwater monitoring and sampling event at the Site. During the November 2007 event, less than an inch of free product (0.84 inch) was measured in well MW-1 and subsequently removed prior to sampling and analysis. As measured in January 2008, free product (0.24 inch) re-entered the well and was subsequently reduced to sheen by product removal. Low concentrations of PCE, TCE, and DCE were detected wells MW-2, MW-3 and MW-4 with highest concentrations present in the up gradient well MW-2 indicating an offsite source. The calculated groundwater flow direction was to the northeast at 76Q% east of north under a hydraulic gradient of 0.015 foot per foot (ft/ft). The general groundwater flow direction and hydraulic gradient calculated for this monitoring event remains relatively similar to those calculated during previous events; although the recent June 2004 & November 2007 flow directions have shifted slightly to the east as compared to the October 2000 thru December 2001 events. The historic hydraulic gradient at the Site has ranged from 0.006 ft/ft (December 2001) to 0.08 ft/ft (June 2000). A summary of the November 2007 monitoring and sampling activities is presented in the GGE groundwater monitoring report dated February 2008.

Violation Date: 12-02-2019
Citation: HSC 6.95 25505.1 - California Health and Safety Code, Chapter 6.95, Section(s) 25505.1

Violation Description: Failure to notify property owner in writing that the business is subject to the business plan program and has complied with its provisions.

Violation Notes: Returned to compliance on 12/02/2019. HMBP Property Owner Letter completed and sent during inspection. No further action required to correct this item.

Violation Division: San Mateo County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Site ID: 149331
Site Name: ROYALITE MANUFACTURING, INC
Violation Date: 11-29-2017
Citation: 22 CCR 18 66268.7(a) - California Code of Regulations, Title 22, Chapter 18, Section(s) 66268.7(a)

Violation Description: Failure to determine if the waste has to be treated before it can be land disposed and retain the documentation at least three years from the date that the waste was last sent to on-site or off-site treatment, storage, or disposal.

Violation Notes: Returned to compliance on 12/01/2017. Royalite changed hazardous waste disposal company approximately 2 years ago. Since then no Land Disposal Restriction (LDR) Notification forms available for hazardous waste pick ups. Haz waste contractor notified and will provide LDR Notification forms within the next few days. Provide copy of each missing LDR Notification form to CUPA within 30 days.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Facility Status: **Open - Site Assessment**
Status Date: 07/01/2002
Global Id: SL599992810
Lead Agency: SAN FRANCISCO BAY RWQCB (REGION 2)
Lead Agency Case Number: Not reported
Latitude: 37.5043513883857
Longitude: -122.255006432533
Case Type: Cleanup Program Site
Case Worker: ADF
Local Agency: Not reported
RB Case Number: 2179.7178
File Location: Regional Board
Potential Media Affected: Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern: Diesel, Gasoline, Waste Oil / Motor / Hydraulic / Lubricating
Site History: G.N. Renn, Inc., is an unmanned petroleum fueling facility. The facility was built sometime in the mid-1920s or 1930s and has been owned and operated by G.N. Renn since the late 1960s. Three ASTs installed prior to the late 1960s containing petroleum products are located in the rear of the facility. Pipes lead to and from the tanks to a loading rack for the purposes of loading and unloading tanker trucks. Throughput for fuel is approximately 24,000 gallons per week. A fuel island is also located at the front of the facility; it has three unattended card lock fueling pumps. There is hydrocarbon contamination of soil and groundwater, mainly diesel and gasoline. Site investigation work plan and schedule requested in September 2001. Two NOV's sent after receiving a late and inadequate response. Offsite down gradient groundwater investigation and offsite sensitive receptor survey never submitted.

Facility Status: **Open - Site Assessment**
Status Date: 08/19/2011
Global Id: T10000003223
Lead Agency: SAN MATEO COUNTY LOP
Lead Agency Case Number: 779089
Latitude: 37.5077106
Longitude: -122.2534815
Case Type: Cleanup Program Site
Case Worker: BG
Local Agency: SAN MATEO COUNTY LOP
RB Case Number: Not reported
File Location: Not reported
Potential Media Affected: Indoor Air, Other Groundwater (uses other than drinking water), Soil, Soil Vapor

Potential Contaminants of Concern: Tetrachloroethylene (PCE), Vinyl chloride
Site History: Extracted from Green Environment's August 12, 2013 Expanded Site Investigation. San Mateo County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report. The subject property consists of 17,360 square feet (sq ft) of land that contains a one (1) story industrial building covering an area of 10,800 sq ft. The subject property reportedly was developed with the current building in 1965, originally occupied by a water softener company. The building was later divided into multiple divided spaces, and has been occupied by multiple businesses, including a machine shop business, Sterling Screw Products (Sterling), from circa 1975 to 2010. At the time of GEIs initial assessment in 2010, the building was divided into two (2) spaces. Sterling occupied approximately 9,800 sq ft within the western, southern and southeastern portions of the building. The remainder of the building was occupied by Wall Paper Design and Leeds Environmental. Parking lots are located along the eastern and western sides of the building. In 2010, features located inside the building

included offices, former waste oil storage areas, a former centrifuge parts cleaner, and a former clean room. A concrete pad containing a 55-gallon metal sump and a concrete sump were located within the parking lot adjacent to the west side of the building. According to records on file at SMCHS offices, chemicals used and stored onsite by Sterling included oils and degreasing solvents. Wastes generated onsite included waste oils, waste degreasing solvents (naphtha, mineral spirits), and sludge(s) from washing parts. SMCHS records indicated that Sterling received several violation notices for improper waste management. Environmental concerns previously expressed by SMCHS included chemical spills on the building floor, open hazardous waste containers, discharges of oily water to the sewer from a wash area outside the building, and potential oil-impacted soil adjacent to the wash area. Based upon regional topography and information provided in the State of California GeoTracker database, the direction of groundwater flow within the area of the subject property is generally to the northeast. This also is confirmed by groundwater flow conditions observed at a nearby site (952/956 Bransten Road), which lies approximately 100 feet southwest of the subject property.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Address: 917 BRANSTEN RD
City,State,Zip: SAN CARLOS, CA 94070
Site ID: 112998
CERS ID: 10069360
CERS Description: Chemical Storage Facilities

Violations:

Site ID: 112998
Site Name: DURHAM SCHOOL SERVICES
Violation Date: 08-17-2017
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)

Violation Description: Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.

Violation Notes: Returned to compliance on 05/31/2019. Hazardous materials safety and emergency procedures training provided to repair shop personnel and documentation is available for mechanics. Provide hazardous materials safety and emergency procedures training to all employees and keep record of training activities available.

Violation Division: San Mateo County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Site ID: 112998
Site Name: DURHAM SCHOOL SERVICES
Violation Date: 08-17-2017
Citation: 40 CFR 1 262.34(d)(5)(ii) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(ii)

Violation Description: Failure to post the following information next to the telephone: (A) The name and telephone number of the emergency coordinator; (B) Location of fire extinguishers and spill control material, and, if present, fire alarm; and (C) The telephone number of the fire department, unless the facility has a direct alarm.

Violation Notes: Returned to compliance on 05/01/2019. Emergency information is posted on site but does not include all required information to meet the small quantity hazardous waste generator requirement. CUPA will provide a template form that can be completed and used for this requirement.

Violations Found:	No
Eval Type:	Other, not routine, done by local agency
Eval Notes:	I met with the lead mechanic, Shalendra Prakash, to discuss open minor violations from the last inspection conducted in August 2017. HMBP property owner notification letter and hazardous materials safety and emergency procedures training documentation for all employees may be available but records are kept in a locked office for an employee that is on medical leave for 2-3 weeks. If available, property owner notification letter and employee training documentation must be submitted to the CUPA as soon as possible to correct open violations. If not available, complete required activities and provide appropriate documentation to the CUPA to demonstrate that these violations were corrected. CUPA will email template forms that can be used for corrective actions.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110070096756

[Click Here:](#)

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Registry ID: 110000861023

[Click Here:](#)

Environmental Interest/Information System:

AIR EMISSIONS CLASSIFICATION UNKNOWN
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
OSHA ESTABLISHMENT
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Notes: Waste, and starting accumulation date.
Returned to compliance on 08/11/2020. I observed one 5-gal carboy that contains nickel sulfamate waste liquid with a completed hazardous waste label missing the accumulation start date. The accumulation start date was added to the existing label and this violation was corrected during the inspection.

Violation Date: 02-13-2017
Citation: 22 CCR 15 66265.173 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.173

Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.

Violation Notes: Returned to compliance on 02/13/2017. Three 55-gallon drums that were not closed observed, one in the WWTP Room used for filter press sludge, and two along back wall adjacent to the chemical storage room used for electroless nickel solids/filters and potassium gold cyanide solids/filters, respectively. All three 55-gallon drums were subsequently closed and I observed this to be the case.

Citation: 22 CCR 15 66265.16 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.16
Violation Description: Failure to provide employees with hazardous waste training program of class room instructions or on-the-job training within the first six months after the date of their employment or assignment to a facility, or to a new position at a facility and annually thereafter. Training records on current personnel shall be kept until closure of the facility and for former employees the record shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a written description of the type and amount of both introductory and continuing training that will be given to each person filling a position.
Violation Notes: Returned to compliance on 06/20/2019. Training records for workers involved with hazardous waste management activities are available but these records are incomplete with regard to job titles, job descriptions, and type and amount of training provided. Site contact, Dan Dalton, provided a training record format during the inspection and will use this for future hazardous waste generator training activities. This violation has been corrected.

Violation Date: 01-02-2018
Citation: 19 CCR 4.5 2755.1(a) - California Code of Regulations, Title 19, Chapter 4.5, Section(s) 2755.1(a)
Violation Description: Failure to compile and maintain the following up-to-date safety information related to the regulated substances, processes, and equipment: 1. Material Safety Data Sheets that meet the requirements of Section 5189 of Title 8 of CCR; 2. Maximum intended inventory of equipment in which the regulated substances are stored or processed; 3. Safe upper and lower temperatures, pressures, flows and compositions; 4. Equipment specifications; 5. Codes and standards used to design, build & operate the process.

Violation Notes: Returned to compliance on 04/05/2018.

Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit a site map with all required content.

Violation Notes: Returned to compliance on 10/11/2018. Review the site map for accuracy and indicate specific storage location details that correspond to the chemical location referenced in the hazardous materials inventory for each hazardous material. For example, I was unable to find the location of the Acid Bunker, Base Bunker, and Wet Process Area on the site map and some hazardous materials in the chemical inventory section reference these storage locations. Provide a site map that includes the location of each process bath and bulk storage tank.

Stacy Brunner of Brunner Group to conduct a CalARP Program inspection. I discussed several CalARP Program requirements and elements of the current RMP including the status of planned safety changes identified in the RMP and on-going facility upgrades. NxEdge is making progress on the process line upgrades and other safety improvements and plans to complete improvements in August 2021. NxEdge will submit a detailed progress report regarding process line and facility improvements that includes an updated time line for completion.

Violation Date: 02-13-2017
Citation: 22 CCR 15 66265.173 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.173
Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes: Returned to compliance on 02/13/2017. Three 55-gallon drums that were not closed observed, one in the WWTP Room used for filter press sludge, and two along back wall adjacent to the chemical storage room used for electroless nickel solids/filters and potassium gold cyanide solids/filters, respectively. All three 55-gallon drums were subsequently closed and I observed this to be the case.

Violation Description: Failure to provide employees with hazardous waste training program of class room instructions or on-the-job training within the first six months after the date of their employment or assignment to a facility, or to a new position at a facility and annually thereafter. Training records on current personnel shall be kept until closure of the facility and for former employees the record shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a written description of the type and amount of both introductory and continuing training that will be given to each person filling a position.

Violation Notes: Returned to compliance on 06/20/2019. Training records for workers involved with hazardous waste management activities are available but these records are incomplete with regard to job titles, job descriptions, and type and amount of training provided. Site contact, Dan Dalton, provided a training record format during the inspection and will use this for future hazardous waste generator training activities. This violation has been corrected.

Eval Notes: I met with NxEdge representatives Cameron Fee and Nicholas Xydas and Stacy Brunner of Brunner Group to conduct a CalARP Program inspection. I discussed several CalARP Program requirements and elements of the current RMP including the status of planned safety changes identified in the RMP and on-going facility upgrades. NxEdge is making progress on the process line upgrades and other safety improvements and plans to complete improvements in August 2021. NxEdge will submit a detailed progress report regarding process line and facility improvements that includes an updated time line for completion.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Site ID: 367245
Site Name: KIEFER MACHINING INC
Violation Date: 10-25-2016
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)

Violation Description: Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.

Violation Notes: Returned to compliance on 10/25/2016. Document training and submit to SM CUPA within 30 days.

Violation Division: San Mateo County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Site ID: 367245
Site Name: KIEFER MACHINING INC
Violation Date: 10-23-2018
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)

Violation Description: Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.

Violation Notes: Returned to compliance on 11/01/2018. Training documentation was unavailable at the time of the inspection. Provide training records to SMCUPA within 30 days.

Violation Division: San Mateo County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Site ID: 367245
Site Name: KIEFER MACHINING INC
Violation Date: 11-03-2014
Citation: HSC 6.95 25508(d) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(d)

Violation Description: Failure to complete and/or electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.

Violation Notes: Returned to compliance on 11/07/2014.
Violation Division: San Mateo County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Evaluation:

Eval General Type: Compliance Evaluation Inspection
Eval Date: 03-31-2021
Violations Found: No

Eval Type: Routine done by local agency
Eval Notes: Facility does not store any excess cutting fluid onsite aside from a couple of 5 gallon buckets. The material is only generated to waste when the machines are serviced, his volume is typically less than 55 gallons and only reportable is waste so he will go into 2160 Program

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Eval Notes:	I met with the business owner, Ben Hagler, and discussed the two open minor violations from the hazardous waste program inspection conducted on 12/26/17. The Cal ID number was reactivated effective 2/26/18 and this violation will be closed. The remaining violation requires the completion and posting of an emergency procedures form that will be provided by the CUPA as an email attachment. Once this form is completed and posted, provide a photo of the posted form so that I can close out the violation.

Violations:

Site ID: 170419
Site Name: WARRENS PRECISION
Violation Date: 05-30-2018
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Description: Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Violation Notes: Returned to compliance on 07/16/2018. Training records on site were from 2016 Provide training and submit documentation to SMCUPA within 30 days.
Violation Division: San Mateo County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Site ID: 170419
Site Name: WARRENS PRECISION
Violation Date: 05-19-2014
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description: Failure to properly close hazardous waste containers when not in active use.
Violation Notes: Returned to compliance on 06/15/2015. place cover on drums and tighten ring when not draining chips, 1 of 2 had open top
Violation Division: San Mateo County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 170419
Site Name: WARRENS PRECISION
Violation Date: 05-30-2018
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 07/16/2018. The last pickup date on file is 8/24/2017. Have waste picked up and provide documentation to SMCUPA within 30 days. If only one drum is needed, get rid of one drum and you may have waste picked up annually. Provide documentation to SMCUPA within 30 days.

Eval Source:	CERS
Eval General Type:	Compliance Evaluation Inspection
Eval Date:	01-04-2021
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	I met on-site with Andrey Kresov and completed an HWG Program inspection. I inspected all hazardous waste storage locations and I didn't observe any signs of spills or leaks. Mr. Kresov stated that the building was sold recently and Warren's Precision will be closing in four months.

Violation Date: 11-01-2018
Citation: HSC 6.95 25505.1 - California Health and Safety Code, Chapter 6.95, Section(s) 25505.1
Violation Description: Failure to notify property owner in writing that the business is subject to the business plan program and has complied with its provisions.
Violation Notes: Returned to compliance on 11/30/2018. Notify the property owner or their agent that the business complied with the Hazardous Materials Business Plan Program requirements and provide a copy within 5 days if requested. CUPA will provide a template form that can be completed and used for this requirement.

Violation Description: 1, Section(s) 265.173
Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.

Violation Notes: Returned to compliance on 11/16/2020. One 5-gallon carboy container of waste coolant in 1080 Commercial St. was not closed, and the cap was placed on the container during the inspection. In the outdoor storage yard I observed an open plastic garbage can with garnet waste from the hydrojet cutting table/tank and waste garnet powder in several locations on the asphalt surface. The garnet waste solid is being managed as non-RCRA hazardous waste. In addition, I observed a secondary containment pallet with an oily liquid in the outdoor storage yard. Correct open container violations and clean up spilled garnet waste solid, and provide proof of corrective action to the CUPA within 30 days.

Violation Division: San Mateo County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 416679
Site Name: ZOOX LABS, INC
Violation Date: 11-01-2018
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)

Violation Description: Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.

Violation Notes: Returned to compliance on 12/04/2018. Provide hazardous materials safety and emergency procedures training to all employees during new hire training and annually thereafter. Document employee training and maintain records for future inspections.

Violation Division: San Mateo County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Site ID: 416679
Site Name: ZOOX LABS, INC
Violation Date: 11-01-2018
Citation: 40 CFR 1 262.34(d)(5)(ii) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(ii)

Violation Description: Failure to post the following information next to the telephone: (A) The name and telephone number of the emergency coordinator; (B) Location of fire extinguishers and spill control material, and, if present, fire alarm; and (C) The telephone number of the fire department, unless the facility has a direct alarm.

Violation Notes: Returned to compliance on 12/04/2018. Complete an emergency procedures information form and post it in a visible location near a phone. The CUPA will provide a template form that can be completed and used for this requirement.

Violation Notes: Facility had a drum of paint waste that was open. Please ensure all funnels are closed and functional.

Violation Division: San Mateo County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 420317
Site Name: Caliber Collision Centers - San Carlos
Violation Date: 04-21-2021
Citation: 40 CFR 1 262.34(d)(5)(iii) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(iii)

Violation Description: Failure to ensure that all employees are thoroughly familiar with proper waste handling and emergency procedures, relevant to their responsibilities during normal facility operations and emergencies.

Violation Notes: Employee training is due at this time. Facility has it scheduled for next month. Please send copy of records when complete.

Violation Division: San Mateo County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 420317
Site Name: Caliber Collision Centers - San Carlos
Violation Date: 04-23-2019
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173

Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.

Violation Notes: Returned to compliance on 04/23/2019. Three hazardous waste containers were not in use and not closed at the time of the inspection. These containers were closed by Caliber personnel during the inspection and these minor violations have been corrected.

Violation Division: San Mateo County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 420317
Site Name: Caliber Collision Centers - San Carlos
Violation Date: 04-23-2019
Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)

Violation Description: Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.

Violation Notes: Returned to compliance on 05/23/2019. Based on accumulation start dates on current hazardous waste containers it appears that Caliber Collision disposed of hazardous waste liquids last year on or about October 2018. Determine if this is the case, obtain a copy of the "Designated Facility to Generator" manifest for your records, and provide a copy to the CUPA within 30 days.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
