Compliance:		
<p>A mobile washing Operation may work in several locations throughout the day. Jobs can occur in people's driveways, in public parking lots or on the side of the road where there is a high risk of pollutants directly entering the storm water system. <u>(Storm drains are not treated, so pollutants go directly to our local rivers)</u> When mobile washing: paint, sediment, and solvents used in the detailing process can be easily transported from the work area and discharged into the Storm drain system.</p> <p>To comply with Storm water requirements:</p> <ul style="list-style-type: none"> • Determine how you are going to dispose of any wastewater before you start work. If there are not appropriate methods for on-site disposal, collect all wastes and deposit them at wastewater treatment disposal location. • Wash on lawns or rocky areas where wash water can soak into the ground. Make sure you are a reasonable distance away from any storm water entry points to minimize the risk of run-off entering the storm drain. • Place rock socks or other pollution prevention methods around any nearby storm water drainage points to redirect or retain any contaminated water. • Never allow wastewater from any cleaning/detailing processes to flow directly into the gutter or storm drain. • Dispose of vacuum cleaner waste in an approved waste container. • Ensure each crew has a spill response kit, which should include floor dry or an absorbent to soak up spilled chemicals or detergents, a dustpan and broom to sweep up the spill and a bag or container to collect the spill for appropriate disposal. • Cleaning of engines or oily containers is not recommended as a mobile operation because of the difficulty in handling large quantities of oil-contaminated wastewater. 		
Certification		
<p>I acknowledge having read and reviewed the requirements of this statement of compliance and assure that my business will never knowingly allow any type of pollutants to enter any public or private street, curb, gutter or storm drain in St. George City. I agree to comply with all required standard operating procedures to prevent sediment, oils, and detergents from entering the St. George City storm drain system.</p>
