PROJECT TITLE: Tra Vigne Development Project

City of Stockton Community Development Department as a Lead Agency has completed, independently reviewed, and analyzed the following draft Environmental Impact Report for Tra Vigne Development Project (P16-0025).

PROJECT LOCATION:

The proposed Project site is located within the northeastern portion of the City of Stockton Metropolitan Area, within the unincorporated area of San Joaquin County. The Project site is immediately southeast of the intersection of West Lane and Eight Mile Road. The Project site is bounded on the north and west by Eight Mile Road and West Lane, which are existing regional arterials, on the east by the Union Pacific Railroad, and on the south by Bear Creek and the associated Bear Creek Levee. The Project site consists largely of active agricultural fields. The Project site includes 15.57-acres of industrial uses in the north-central portion of the Project site (Assessor's Parcel Numbers 120-02-13, and 120-02-14); uses within these industrial lots include Pacific Bell and Bragg Investment Company.

PROJECT DESCRIPTION:

The Project includes development of up to 340 HDR units, up to 1,163 LDR units, up to 101,500 square feet of commercial, an existing 15.57-acre industrial area, establishment of a 14.7-acres K-8 school site, and associated park and utility improvements. The Project is requesting annexation and pre-zoning of 341.17-acres of land into the Stockton city limits, and the subsequent development of 318.82-acres of land. The General Plan Amendment would include maintaining approximately 260.69-acres of LDR uses; maintaining approximately 15.57-acres of I uses; changing approximately 1.5-acres of LDR to C uses; changing approximately 1.03-acres of LDR to HDR uses; and changing 20.36-acres of LDR to OSA. Changes to the Circulation Element would include the removal of a bridge crossing over Bear Creek. Associated Tentative Maps would provide for subdivision of the project site. The project will also include a Development Agreement.

SIGNIFICANT ENVIRONMENTAL EFFECTS:

The Draft EIR has identified the following environmental issue areas as having significant and unavoidable environmental impacts from implementation of the Project: Aesthetics, Agricultural Resources, Air Quality, Greenhouse Gas Emissions and Climate Change, Public Services and Recreation, Transportation and Circulation, and Cumulative Impacts. All other environmental issues were determined to have no impact, less than significant impacts, or less than significant impacts with mitigation measures incorporated into the Project.

PUBLIC REVIEW PERIOD:

A 45-day public review period for the Draft EIR will commence on April 12, 2018 and end by 4:30 PM on May 29, 2018. Any written comments on the Draft EIR must be received at the address below or E-mail within the public review period. Copies of the Draft EIR are available for review at the City of Stockton, 345 N. El Dorado Street, Stockton, CA 95202. A copy of the Draft EIR may be reviewed and/or obtained at the following address or at **http://www.stocktonca.gov/environmental**.

SUBJECT: Notice of Preparation – Tra Vigne Development Project

EIR CONSULTANT:

Steve McMurtry, Principal Planner
De Novo Planning Group
1020 Suncast Lane, Suite 106
El Dorado Hills, CA 95762
(916) 580-9818

Notice of Preparation: This is to notify public agencies and the general public that the City of Stockton, as the Lead Agency, will prepare an EIR for the Tra Vigne Development Project. The City of Stockton is interested in the input and/or comments of public agencies and the general public as to the scope and content of the environmental information that is germane to the agencies' statutory responsibilities in connection with the proposed project, and public input. Responsible/trustee agencies will need to use the EIR prepared by the City of Stockton when considering applicable permits, or other approvals for the proposed project.

We need to know the views of your agency or organization as to the scope and content of the environmental information germane to your agency's statutory responsibilities or of interest to your organization in connection with the proposed project. Specifically, we are requesting the following:

1. If you are a public agency, state whether your agency will be a responsible or trustee agency for the proposed project and list the permits or approvals from your agency that will be required for the project and its future actions;
2. Identify significant environmental effects and mitigation measures that you believe need to be explored in the EIR with supporting discussion of why you believe these effects may be significant;
3. Describe special studies and other information that you believe are necessary for the City of Stockton to analyze the significant environmental effects, alternatives, and mitigation measures you have identified;

4. For public agencies that provide infrastructure and public services, identify any facilities that must be provided (both on- and off-site) to provide services to the proposed project;
5. Indicate whether a member(s) from your agency would like to attend a scoping workshop/meeting for public agencies to discuss the scope and content of the EIR's environmental information;
6. Provide the name, title, and telephone number of the contact person from your agency or organization that we can contact regarding your comments.

Comment Period: Due to the time limits mandated by State law, your response must be sent and received by the City of Stockton by the following deadlines:

- For responsible agencies, not later than 30 days after you receive this notice.
- For all other agencies and organizations, not later than 30 days following the publication of this Notice of Preparation. The 30-day review period ends on August 7, 2017.

If we do not receive a response from your agency or organization, we will presume that your agency or organization has no response to make.

Scoping Meeting: A responsible agency, trustee agency, or other public agency may request a meeting with the City of Stockton or its representatives in accordance with Section 15082(c) of the CEQA Guidelines. A public scoping meeting will be held during the public review period as follows:

July 26, 2017 at 6:00 PM in the Large Conference Room at the City's Permit Center
(located at 345 N. E Dorado Street)

Please send your response to Brian Millar, Project Manager at the City of Stockton, 345 N. El Dorado Street, Stockton, CA 95202. If you have any questions, please contact Brian Millar at (530) 902-9218 or via email at: brian@landlogistics.com.

PROJECT LOCATION AND SETTING

PROJECT LOCATION

The proposed Project site is located in the northeastern portion of the City of Stockton Metropolitan Area, within the unincorporated area of San Joaquin County. The Project area is adjacent to the City of Stockton city limits to the east, within the Stockton Sphere of Influence (SOI) (as defined in the 2035 Stockton General Plan), and within the City of Stockton Urban Services Boundary.

The Project site is immediately southeast of the intersection of West Lane and Eight Mile Road. The Project site is bounded on the north and west by Eight Mile Road and West Lane, which are existing regional arterials, on the east by the Union Pacific Railroad (UPRR), and on the south by Bear Creek and the associated Bear Creek Levee. An irrigation catch pond runs along the north, side of the Project site. The Project site is located within a portion of Section 2 of Township 2

North, Range 6 East MDBM. The site is shown on the Lodi South, California, 7.5-minute series quadrangle map. Figures 1 and 2 show the Project's regional location and vicinity.

The Project site is made up of several assessor parcels (APN's), which are listed in Table 1, and are displayed on Figure 3.

SITE TOPOGRAPHY

The Project site is relatively flat and ranges in elevation from approximately 25 to 35 feet above sea level. Figure 4 shows the USGS Topographic Map of the Project site.

EXISTING SITE USES

The Project site consists largely of active agricultural fields (roughly 253 acres in production). The Project site includes 15.57 acres of industrial uses in the north-central portion of the Project site (APN's 120-02-13, and 120-02-14); uses within these industrial lots include Pacific Bell, and Bragg Investment Company. Figure 5 shows aerial imagery of the current existing site uses within the Project site.

TABLE 1: PARCELS WITHIN THE PROJECT AREA

APN	*LEGAL OWNERS*	*ACREAGE*
Tra Vigne West		
120-02-01	MCD South Parcel, LLC	0.75
120-02-02	MCD North Parcel, LLC	80.50
120-02-03	Western States Land, LLC	38.34
120-02-17	MCD South Parcel, LLC	25.53
120-02-18	MCD South Parcel, LLC	5.68
120-02-19	MCD South Parcel, LLC	12.66
120-02-20	MCD South Parcel, LLC	3.52
120-02-22	MCD South Parcel, LLC	20.21
120-02-23	MCD South Parcel, LLC	12.97
Tra Vigne East		
120-02-13	Pacific Bell	5.29
120-02-14	Bragg Investment Company	10.28
120-02-15	Woodside Teresi LLC	98.02
122-01-02	UPRR	2.84
122-01-04	UPRR	2.23
Total Project Area Parcels		
Tra Vigne West	--	200.16
Tra Vigne East	--	118.66
	Subtotal – Development Area	***318.82***
Total Annexation Area		
Right-of-Way	Existing County Public ROW	22.35
	Total – Annexation Area	***341.17***

NOTE: THE 318.82-ACRE DEVELOPMENT AREA REFLECTS THE TOTAL ACREAGE OF THE LEGAL PARCELS WITHIN THE DEVELOPMENT AREA. THE TOTAL DEVELOPMENT AREA ACCORDING TO THE ASSESSOR PARCELS IS APPROXIMATELY 321.57 ACRES, FOR A TOTAL DISCREPANCY OF +2.75 ACRES. THIS DISCREPANCY APPLIES TO APNS 120-02-01 (+0.17 ACRE DISCREPANCY) AND 120-02-02 (+2.58 ACRE DISCREPANCY).

EXISTING SURROUNDING USES

Uses immediately adjacent to the Project site include a truck and trailer repair service establishment to the northwest across Eight Mile Road. Other existing uses north of the Project site include large-lot single family residences and agricultural land. Immediately to the east of the Project site is industrial land uses, including several large warehouses and a large storage lot. Farmland lies immediately west and south of the Project site. Other nearby uses include Ronald McNair High School located immediately southwest of the Project site.

GENERAL PLAN LAND USE DESIGNATIONS

The Project site is currently located within San Joaquin County. The Project site is outside the Stockton city limits, but within the City's SOI.

EXISTING CITY OF STOCKTON GENERAL PLAN LAND USE DESIGNATIONS

The City of Stockton General Plan (2035) designates the Project site as Low Density Residential (LDR maximum 8.7 dwelling units per acre [du/ac]), High Density Residential (HDR maximum 29.0 du/ac), Commercial (C Maximum FAR: 0.3, maximum 29 du/ac), and Industrial (I maximum FAR 0.6).

Figure 6 depicts the 2035 Stockton General Plan land use designations for the Project site and the surrounding areas. The General Plan contains the following standards to guide development for these land uses:

Low Density Residential (LDR): Allowed uses: single-family residential units, duplexes, triplexes, semi-detached patio-homes, townhomes, public and quasi-public uses, second units, and other similar and compatible uses.

- Maximum dwelling units per gross acre: 6.1 du/ac.
- Maximum dwelling units per net acre: 8.7 du/ac.

High Density Residential (HDR): Allowed uses: Multifamily residential units, apartments, dormitories, group homes, guest homes, public and quasi-public uses, and other similar and compatible uses.

- Maximum dwelling units per gross acre: 23.2 du/ac outside the downtown area; 69.6 du/ac inside downtown.
- Maximum dwelling units per net acre: 29 du/ac outside the downtown area; 87 du/ac inside downtown.

Commercial (C): Allowed uses: a wide variety of retail, service, and commercial recreational uses, business, medical and professional offices, residential uses, public and quasi-public uses and other similar and compatible uses. Community or regional commercial centers as well as freestanding commercial establishments are permitted.

- Maximum floor area ratio (FAR): 0.3 outside the Downtown area. 5.0 inside the Downtown area.

- Maximum dwelling units per gross acre: 23.2 du/ac outside the downtown area; 69.6 du/ac inside downtown.
- Maximum dwelling units per net acre: 29 du/ac outside the downtown area; 87 du/ac inside downtown.

Industrial (I): Allowed uses: a wide variety of industrial uses including uses with nuisance or hazardous characteristics, warehousing, construction contractors, light manufacturing, offices, retail sales, service businesses, public and quasi-public uses, and other similar and compatible uses. Residential uses are prohibited.

- Maximum FAR: 0.6

SAN JOAQUIN COUNTY GENERAL PLAN LAND USE DESIGNATIONS

The San Joaquin County General Plan currently designates the project site for Low Density Residential (R/L), Residential/High Density (R/H), Community Commercial (C/C), Limited Industrial (I/L), and General Industrial (I/G) uses. Below is a general description of County Designated land uses within the project site. The County General Plan land use designations for the project site and surrounding area are shown on Figure 7a.

Low Density Residential (R/L): This designation is appropriate for single family neighborhoods. The typical housing type is detached, single family dwelling units. The density is 2 to 6 primary dwelling units per gross acre.

Residential/High Density (R/H): This designation provides for apartments, condominiums, and other multi-family housing located near central business districts, major commercial areas, and major transportation routes. The density ranges from 15 to 40 units per gross acre depending on the zoning (R/H zoning allows 20 du/ac).

Community Commercial (C/C): This designation provides for a full range of retail and service establishments, allowing comparison shopping and serving Urban Communities or regional markets. Typical uses include a full range of retail sales, public buildings, eating and drinking establishments, personal services, and limited administrative and professional offices. Community Commercial areas are permitted only in central business districts or extensive commercial areas in Urban Communities; other development locational criteria also apply.

Limited Industrial (I/L): This designation provides for a range of industrial activities, including production, assembly, warehousing and distribution. Typical uses are light impact manufacturing, warehousing, wholesaling, corporation yards, and distribution. Development and locational criteria apply.

General Industrial (I/G): This designation provides for a full range of industrial activities whose location and operation tend to have moderate to high nuisance characteristics and therefore require segregation from other land uses. Typical uses include manufacturing, distribution, storage, and wholesaling. Development and locational criteria apply.

SAN JOAQUIN COUNTY ZONING DESIGNATIONS

The San Joaquin County Zoning Ordinance currently designates the project site for General Industrial (I-G), Limited Industrial (I-L), and Agriculture-Urban Reserve (AU-20) uses. Below is a general description of County zoning within the project site. The County General zoning designations for the project site and surrounding area are shown on Figure 7b.

I-G Zone (General Industrial): This zone provides for a wide range of manufacturing, distribution and storage uses which have moderate to high nuisance characteristics such as noise, heat, glare, odor, and vibration, and which require segregation from other land uses, and/or may require outside storage areas. New lots in this zone are a minimum of 10,000 square feet.

I-L Zone (Limited Industrial): This zone is intended to provide for light impact manufacturing, warehousing, wholesaling, construction contracting, and distribution uses. Activities within this zone have external physical effects that are generally restricted to the immediate area, are compatible with surrounding uses, are conducted entirely within enclosed buildings, and have outdoor storage areas that are screened. Business and professional offices may also be appropriate within this zone. New lots in this zone are a minimum of 10,000 square feet.

AU Zone (Agriculture-Urban Reserve): This zone is intended to retain in agriculture those areas planned for future urban development in order to facilitate compact, orderly growth and to assure the proper timing and economical provision of services and utilities. The minimum parcel size within the AU zone is 20 acres.

SURROUNDING GENERAL PLAN DESIGNATIONS

Lands to the north of the Project site (within the county) consist of General Agriculture (A/G). Adjoining lands to the east of the Project site (within the City of Stockton) are designated for Industrial uses. Areas surrounding the Project site to the south and west (within the SOI) have a City designation of LDR and Village H. The City of Stockton and San Joaquin County General Plan land use designations for the Project site and surrounding areas are shown on Figures 6 and 7a.

PROJECT DESCRIPTION

PROJECT OBJECTIVES

Consistent with CEQA Guidelines Section 15124(b), a clear statement of objectives and the underlying purpose of the proposed Project shall be discussed. The principal objective of the proposed Project is the approval and subsequent implementation of the Tra Vigne Development Project (the proposed Project). The quantifiable objectives of the proposed Project include annexation of 341.17 acres of land into the Stockton city limits, and the subsequent development of 318.82 acres of land, which will include: General Commercial, Low Density Residential housing, High Density Residential housing, and Open Space Parkland.

The Tra Vigne Development Project identifies the following objectives:

- Commercial: Establish a commercial site that strategically maximizes the high visual exposure of Eight Mile Road and West Lane to capitalize on commuter traffic, while also catering to the neighborhood needs of the residents within the development.
- Low Density Residential: Provide low density residential housing in accordance with the General Plan land use map, while ensuring that there is flexibility in the lot and housing size to accommodate real market demands throughout the housing cycle. Ensure that all housing is designed with architectural form that is visually attractive.
- High Density Residential: Provide high density residential housing in accordance with the General Plan land use map in order to provide a mix of housing types and accommodate real market demands throughout the housing cycle. Ensure that all housing is designed with architectural form that is visually attractive.
- School: Provide a site that could accommodate a K-8 school in the event that the School District desires to build a school within the Project site. Alternatively, understanding that the School District may not desire to build a school within the Project site, ensure that there is a design alternative that would accommodate low density residential housing consistent with the form and design of the residential units planned throughout the balance of the Project site.
- Industrial: Retain the existing industrial uses within the Project site.
- Phasing: Establish a logical phasing plan designed to ensure that each phase of development would include necessary public improvements required to meet city standards.

PROJECT CHARACTERISTICS

The Project site has been designed with two sub-planning areas (Tra Vigne West and Tra Vigne East). Figure 8a provides a conceptual site plan that illustrates the development of Tra Vigne West and Tra Vigne East with 1,413 residential units (995 Tra Vigne West and 418 Tra Vigne East), a 15.57 existing Industrial area, a 10.5-acre commercial area, 15.07 acres of park space, and 20.36 acres of open space, mainly located along Bear Creek.

Tra Vigne East: The proposed Project includes a large lot tentative map that would subdivide the Tra Vigne East (APN 120-02-15) property consistent with the proposed land uses. Tra Vigne East only proposes a large lot tentative map at this time, and it is estimated that 418 units would be developed under the proposed scenario. Within this portion of the Project site, approximately 15.57 acres of existing industrial land would be retained.

Tra Vigne West: The proposed Project includes a large lot and small lot tentative map that would subdivide the Tra Vigne West property consistent with the proposed land uses. As shown on Figure 8a, the approximately 205-acre Tra Vigne West includes a detailed lot layout of 655 single family residential units. Residential lot sizes in the vesting tentative map range from 5,000 to 6,000 sf. Additionally, the Tra Vigne West site would include up to 340 high density residential units on 11.7 acres to the east of the proposed commercial area.

The proposed Project establishes a site for a 14.7-acre K-8 school to be developed by the Lodi Unified School District (LUSD). The development of a K-8 school at this site is the discretionary decision of the LUSD, and while the proposed Project has planned for a school at this location, it

will be determined by LUSD at a later date through their decision-making process. If the LUSD decides to not pursue building a school at this site then the site would be developed for residential in accordance with the General Plan land use designation. Construction of homes in this location would increase the number of LDR units by 90 units when compared to the proposed Project with the school site. Figure 8b illustrates this variation of the site plan without the school and with the increased residential units in its place. The total combined units would increase from 1,413 under the proposed Project to 1,503 units under this variation.

Figure 8c provides a proposed conceptual commercial site plan that illustrates a more detailed design for the 10.5-acre commercial area in the northwest portion of the Project site. As shown on Figure 8c, the commercial site is proposed to include a 70,000-sf grocery store, 22,000 sf of retail shops, a 3,500-sf quick service restaurant, a 3,500-sf convenience store with attached fueling facility, and a 2,500-sf wine tasting room.

RESIDENTIAL CHARACTERISTICS TRA VIGNE WEST

As shown on Figures 8a and 8b, typical residential lots within the Project site range from 5,000 sf to 6,000 sf. Typical lots are generally uniform in nature (rectangle shaped). Corner lots, and lots adjacent to cul-de-sacs are generally not uniform in shape.

RESIDENTIAL DEVELOPMENT AREAS AND PHASING

Residential lots within the Project site are proposed to be developed in several phases. The proposed phasing indicates early development would be located along the southwest portion of the Project site along West Lane and would develop to the east, and then expand to the north.

PARKS AND OPEN SPACE

Approximately 9.5 acres of traditional park space is proposed for Tra Vigne West. Two park areas are proposed within Tra Vigne West including a centrally located 5.8-acre park and a 3.7-acre park in the southwest corner of the Tra Vigne West site. Additionally, a 6.24-acre detention basin area would be located in the southwestern portion of the Project site, adjacent to the 3.7-acre park.

Tra Vigne East includes plans for an additional 5.57 acres of traditional park space. One traditional park area, totaling 5.57 acres, would be located in the southern portion of Tra Vigne East, adjacent to the Bear Creek open space area. Additionally, a 3.75-acre detention basin area would be located in the southwestern portion of the Tra Vigne East within the Project site.

In addition to dedicated parkland within the Project site, 20.36 acres of non-traditional park/open space areas (13.75 acres at Tra Vigne West, and 6.61 acres at Tra Vigne East) are planned along the Bear Creek corridor (19.53 acres) and east of the existing industrial area (0.83 acres).

GENERAL PLAN AMENDMENTS

The proposed Project would require a City of Stockton General Plan Amendment to the Land Use Element to change land uses on the Project site, and to the Circulation Element to remove

an unbuilt bridge crossing over Bear Creek. Changes to the Land Use Element would include maintaining approximately 260.69 acres of LDR uses; maintaining approximately 15.57 acres of I uses; changing approximately 1.5 acres of LDR to C uses; changing approximately 1.03 acres of LDR to HDR uses; and changing 20.36 acres of LDR to Open Space/Agriculture (OSA) along Bear Creek. Changes to the Circulation Element would include the removal of a bridge crossing over Bear Creek associated with what is shown on the Future Roadways Map as an extension of Marlette Road from the west through the Project site and ultimately traveling eastward through the Bear Creek South project to Holman Road. Figure 6 illustrates the current Stockton General Plan land uses within the Project site, including the Marlette Road extension. Proposed General Plan land uses are shown on Figure 9.

ANNEXATION

The Project site is currently within San Joaquin County, and within the City of Stockton's SOI. The proposed Project would result in the annexation of the APN's described in Table 1 into the City of Stockton, as well as the roadway right-of-way for Eight Mile Road and West Lane. As shown in Table 1, the total annexation area would be 341.17 acres. The proposed Project includes property owner initiated annexation for all parcels except for APN 120-02-13 (Pacific Bell) and 120-02-14 (Bragg Investment Company). At the time the initial development applications to the City of Stockton (January 2016), Pacific Bell and Bragg Investment Company have not signed applications for annexation. As a result, there are three annexation options for these two parcels: 1) City initiated annexation, 2) property initiated annexation, or 3) these two parcels are excluded from the annexation. The EIR intends to analyze the potential annexation of the parcels into the City of Stockton unless it is determined that these parcels will not be annexed under this development proposal. Annexation of the Project site, including the Pacific Bell and Bragg Investment Company parcels, is consistent with the growth plans for the City of Stockton. In summary, the annexation area would include the Project development site, as well as portions of Eight Mile Road, West Lane, the UPRR rail line, and portions of Bear Creek.

PREZONING

The Project area is currently within the jurisdiction of San Joaquin County. Current county zoning for all parcels is I-G, I-L, and AU-20. The San Joaquin County Local Agency Formation Commission (LAFCo) will require the Project site to be pre-zoned by the City of Stockton in conjunction with the proposed annexation.

The City's pre-zoning will include the following zoning designations: Residential, Low Density (RL), Residential, High Density (RH), Industrial, Limited (IL), Commercial, General (CG), and Open Space (OS). The pre-zoning would go into effect upon annexation into the City of Stockton. The proposed pre-zoning for the Project site is shown on Figure 10.

UTILITIES AND PLANNED INFRASTRUCTURE IMPROVEMENTS

The construction of onsite and offsite infrastructure improvements would be required to accommodate development of the proposed Project, as described below. Figures 11 and 12 illustrate the location of offsite infrastructure improvements.

Potable Water System: Development areas proposed by the Project would be served by a new potable water distribution system. The water system would consist of 24- and 30-inch lines along West Lane and Eight Mile Road, respectively, and a looped network of 18-, 16-, and 12-inch lines located within the Project site. Local service lines, eight inches in diameter or larger would extend along proposed streets to provide water service to all proposed land uses at their street frontage. The proposed Project would include the dedication of a new City potable water well to be located at the southwest corner of the site, adjacent to Bear Creek and West Lane; the proposed Project intends to dedicate the site for future well development.

The proposed potable water system is shown on Figure 11. One off-site element of the overall proposed Project would involve potable water pipeline construction. The off-site water pipeline would include extension of a 30-inch water pipeline from the existing 12-inch water line along Eight Mile Road east 1,200 linear feet (LF) to Lower Sacramento Road and along Eight Mile Road to West Lane. This pipeline would ultimately connect to an existing water main at Marlette Road.

Wastewater System: Wastewater services would be provided by existing and planned City of Stockton collection and treatment system. Wastewater treatment would be provided at the City's existing Regional Wastewater Control Facility (RWCF) on Navy Drive in southwest Stockton. Wastewater collection would be provided by the City's existing Wastewater Collection System No. 10 (System 10). System 10 facilities were extended into lands in the Project vicinity in conjunction with the North Stockton Pipelines project. Within the Project site, the wastewater collection system would consist predominantly of 8-inch to 10-inch lines installed within proposed local streets. Collection System 10 discharges to the 14-Mile Slough Sanitary Sewer Pump Station, located in northwest Stockton. Due to rapid increase in System 10 flows, the City of Stockton Municipal Utilities Department completed an expansion of the pump station in 2008.

The proposed sewer system is shown on Figure 12. A second off-site element of the overall proposed Project would involve sewer construction through existing agricultural lands including approximately 3,028 LF of 24-inch sewer main in West Lane, and approximately 3,500 LF of 24-inch sewer main along the north side of Bear Creek to connect to the existing 48-inch trunk sewer main northwest of Ronald McNair High School. The development of the 24-inch sewer main along the north side of Bear Creek is required to comply with the City's Sewer Master Plan.

Storm Drainage: Development of the proposed Project would include construction of a new storm drainage system, including a drainage collection system, and two detention basins (one in the southwestern corner of Tra Vigne West, and one at the southwestern corner of Tra Vigne East). It is anticipated that a pump station that would discharge to Bear Creek would be installed at the Tra Vigne West detention basin.

The proposed storm drainage system is shown on Figure 13. Proposed storm drain lines would range from 12 inches to 60 inches in diameter. Collection lines would flow generally west and south to the proposed detention basins located in the southwest corners of Tra Vigne East and Tra Vigne West.

The City will require that a maintenance entity be established to provide for the operation, maintenance, and replacement costs of the detention pond system and other water quality features of the Project. The perimeter of the detention facilities will be landscaped to temper and screen views of the detention basins. Additionally, fencing would be constructed around the detention basin areas for safety and security purposes.

Areas of proposed development within the Project site will be required to meet the "volume reduction" requirements of the City's most recent stormwater National Pollutant Discharge Elimination System (NPDES) permit. Units of development would incorporate design features that would divert storm water to the groundwater system and/or detain runoff before it reaches the collection system. These design features would include measures also described as Low Impact Development (LID) and Volume Reduction Measures, such as grassy swales and porous pavement, among others. Compliance with the City's stormwater standards will require that storm drainage from new development be reduced below "existing runoff" rates.

Disposal of storm water collected to the Tra Vigne West detention basin would be handled by a new on-site storm water pump station and discharge outfall to Bear Creek. The pump station would operate when storm water quality and detention objectives have been met. The pump station is expected to consist of a concrete sump, trash screen and two or more pumps that would deliver storm water flow over or through the Bear Creek levee to an outfall facility. The pump station facility may include an emergency generator to supply electrical power to the pump station during power outages. Disposal of storm water collected to the Tra Vigne East detention basin would be conveyed to the Tra Vigne West detention basin via a 24- and 30-inch storm drain line.

The outfall structure would consist of two or more pipelines directed southeasterly to a point inside the Bear Creek levee. Outfall pipelines would likely terminate at a concrete headwall and energy dissipators set into the toe of the Bear Creek levee; storm drainage would be discharged to a concrete, gunite or riprap apron to flow into the Bear Creek channel. Outfall pipes would terminate in a "tideflex" or a comparable check valve system.

Regulated Public Utilities: Electrical, gas, phone, cable and related internet services would be extended to all portions of the Project site from existing facilities located along West Lane and Eight Mile Road, or other utility systems in the Project area. Proposed utilities would be located within public utility easements to be dedicated along street frontages. Utility improvements would be installed in conjunction with planned street improvements. Existing electrical distribution (i.e., 12 kilovolt), phone and cable lines along the West Lane and Eight Mile Road frontages of the Project site would be undergrounded or relocated in conjunction with required street improvements.

DEVELOPMENT AGREEMENTS

The proposed Project includes a request for approval of one or more Development Agreements (DA) governing the relationship between the City and the Project applicants. The DA may be used to establish City/applicant agreements related to the Project. Such agreements may include commitments to Project entitlements and development standards as well as any administrative and/or financial relationships that may be defined during the review of the

development plan. These relationships have not been defined at present and would be developed during the review of the proposed Project and incorporated into the DA prior to Project approval.

REQUESTED ENTITLEMENTS AND OTHER APPROVALS

The City of Stockton will be the Lead Agency for the proposed Project, pursuant to the State Guidelines for Implementation of the California Environmental Quality Act (CEQA), Section 15050. Actions that would be required from the City include, but are not limited to the following:

- Certification of the EIR;
- Adoption of the Mitigation Monitoring and Reporting Program;
- Approval of City of Stockton General Plan Amendments (Land Use/Circulation Elements);
- Approval of City of Stockton Pre-zoning;
- Approval of annexation;
- Approval of Large Lot Tentative and Final maps;
- Approval of Small Lot Tentative and Final maps;
- Approval of Improvement Plans;
- Approval of Grading Plans;
- Approval of Building Permits;
- Approval of future site plan and design review for Tra Vigne East;
- Approval of design review for Tra Vigne West;
- Approval of Development Agreements;
- Approval of a Conditional Use Permit for the gas station and wine tasting room at the Commercial site;
- Issuance of grading, encroachment, and building permits;
- City review and approval of Project utility plans;
- Formation of a finance district (i.e. CFD or other finance district); and
- Formation of, or annexation into, a Lighting and Landscape District.

OTHER PUBLIC AGENCIES WHOSE APPROVAL IS REQUIRED (E.G., PERMITS, ETC.)

The following agencies may be required to issue permits or approve certain aspects of the proposed Project. Other governmental agencies that may require approval include, but are not limited to, the following:

- California Department of Fish and Wildlife – Streambed Alteration Agreement pursuant to Section 1602 of the California Fish and Game Code;
- Approval by the Central Valley Flood Protection Board (CVFPB);
- Central Valley Regional Water Quality Control Board (CVRWQCB) – Storm Water Pollution Prevention Plan (SWPPP) approval prior to construction activities pursuant to the Clean Water Act;
- CVRWQCB – Permitting of State jurisdictional areas, including isolated wetlands pursuant to the Porter-Cologne Water Quality Act;

- CVRWQCB – Water quality certification pursuant to Section 401 of the Clean Water Act;
- Approval by the San Joaquin County Flood Control;
- Native American Heritage Commission (NAHC);
- San Joaquin Local Agency Formation Commission (LAFCo) – Annexation;
- Sacramento & San Joaquin Drain District (SSJDD) – Approval for construction of an outfall;
- San Joaquin Valley Air Pollution Control District (SJVAPCD) – Approval of construction-related air quality permits;
- SJVAPCD – Authority to Construct, Permit to Operate for stationary sources of air pollution (auxiliary power, storm drainage pump station);
- SJCOG, Inc. (SJCOG) – Issuance of incidental take permit under the San Joaquin Multi-Species Habitat Conservation and Open Space Plan (SJMSCP); and
- United States Army Corps. Of Engineers (USACE) – Permitting of federal jurisdictional areas pursuant to Section 404 of the Clean Water Act.

PROJECT ALTERNATIVES DESCRIPTIONS

Five alternatives to the proposed Project were developed based on input from City staff and the technical analysis performed to identify the environmental effects of the proposed Project. The alternatives analyzed in this EIR include the following five alternatives in addition to the proposed Project.

- No Build Alternative
- With Bridge Alternative
- General Plan 2035 Alternative
- Reduced Project Alternative
- Reduced Intensity/Density Alternative

NO BUILD ALTERNATIVE

Under the No Build Alternative, development of the Project site would not occur, and the Project site would remain in its current existing agricultural condition. It is noted that the No Build Alternative would fail to meet the Project objectives identified by the City of Stockton.

WITH BRIDGE ALTERNATIVE

Under the With Bridge Alternative, the Project site would be developed with similar land use designations and circulation facilities as the proposed Project. However, unlike the proposed Project, this alternative would include construction of the bridge crossing over Bear Creek associated with what is shown on the Future Roadways Map as an extension of Marlette Road from the west through the Project site and ultimately traveling eastward through the Bear Creek South project to Holman Road.

This alternative would result in the same number of HDR units as the proposed Project (340 units), and would reduce the number of LDR units from 1,073 under the proposed Project to 1,066 units, for a total of 1,406 units. This would result in a reduction of seven units when

compared to the proposed Project. Additionally, this alternative would dedicate an equal amount of commercial and non-traditional park areas as the proposed Project, and would increase the amount of traditional park area from 15.07 acres under the proposed Project to 15.37 acres. The anticipated commercial uses and utility improvements under the With Bridge Alternative would be similar to the proposed Project.

This alternative also establishes a site for a 14.7-acre K-8 school to be developed by the LUSD at their discretion. If the LUSD decides to not pursue building a school at this site then the site would be developed for residential in accordance with the General Plan land use designation which would result in the construction an additional 90 units in place of the school. Under this variation, the total residential units would increase from 1,406 to 1,496 units. The balance of the Project site would be developed as proposed under the Proposed Project.

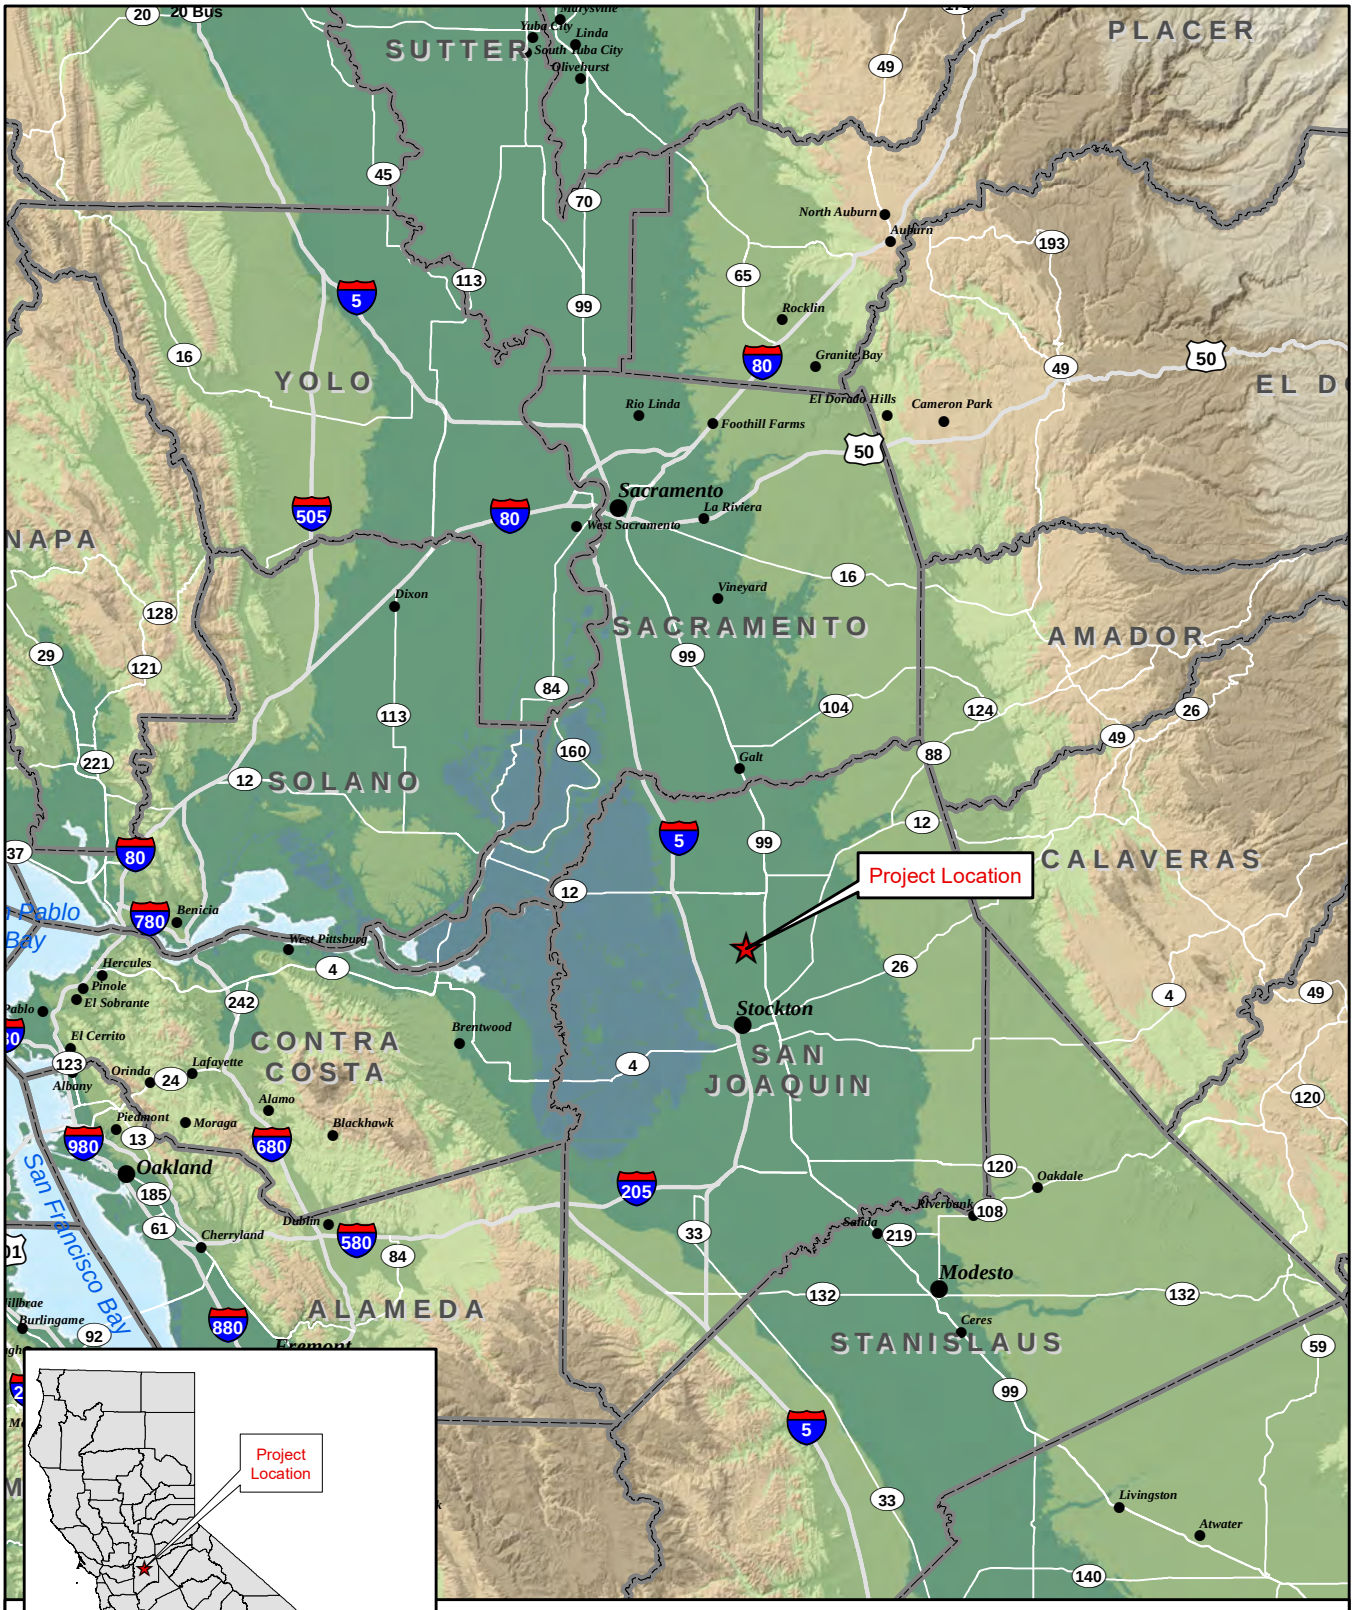
Figures 14 and 15 illustrate the With Bridge Alternative site plan, both with and without the school.

GENERAL PLAN 2035 ALTERNATIVE

Under the General Plan 2035 Alternative, the Project site would be developed with the same land use designations and circulation facilities as described in the City's General Plan 2035. This alternative would not require a General Plan amendment. The balance of the Project site would be developed as proposed under the proposed Project. Under this alternative, the high density residential area would be decreased from 11.7 acres under the proposed Project to 10.67 acres. Additionally, the commercial area would be decreased from 10.5 acres under the proposed Project to 9.0 acres. This alternative would not include dedication of a K-8 school site. This alternative would include construction of the bridge crossing over Bear Creek, which is currently reflected in the Circulation Element of the General Plan 2035. The bridge crossing would change the trip distribution when compared to the proposed Project by providing an alternative access way to the south.

Based on the existing land use designations, the Project site would support approximately 15.7 acres of industrial use (406,937 sf – 0.6 FAR), approximately 9.0 acres of commercial use (117,612 sf – 0.3 FAR), 1,730 (6.1 units per gross acre) to 2,467 (8.7 units per gross acre) low density residential units, and 248 (23.2 units per gross acre) to 309 (29.0 units per gross acre) high density residential units. This alternative would result in 1,978 to 2,776 residential units (low and high density), which is 475 to 1,273 (without school site) to 565 to 1,363 (with school site) more units than under the proposed Project. These are considered maximum development assumptions and would likely be less due to the need for parks, roadways, detention basins, etc. This alternative is illustrated on Figure 6.

REDUCED PROJECT ALTERNATIVE



Under the Reduced Project Alternative, the Project site would be developed with the same components as the proposed Project, but the area utilized for the development would be reduced by approximately 33 percent. The total Project site would be reduced by approximately 106.2 acres, and the existing 15.57-acre industrial area would be eliminated from the Project site. This approximately 197.05-acre alternative would result in up to 715 LDR units (with

school) to 805 LDR units (without school) and up to 226 HDR units (with or without school), for a total of 941 units (with school) to 1,031 units (without school). This would result in a reduction of 472 (with or without school) units when compared to the proposed Project. The 10.5-acre commercial area in the northwest portion of the Project site would be eliminated. This would eliminate a 70,000-sf grocery store, 22,000 sf of retail shops, a 3,500-sf quick service restaurant, a 3,500-sf convenience store with attached fueling facility, and a 2,500-sf wine tasting room. This alternative would still establish a site for a 14.7-acre K-8 school to be developed by the LUSD. However, if the LUSD decides against the K-8 school siting, the area will instead include the development of single family residential units.

REDUCED INTENSITY/DENSITY ALTERNATIVE

Under this alternative, the Project site would be developed with a reduction in the overall Project intensity/density while maintaining the approximate overall Project footprint. For the purposes of discussion, this option considers a 20 percent reduction in the intensity/density of the Project while maintaining the approximately 318.82-acre Project footprint. Typical residential lots would increase from 5,000 to 6,000 sf to 6,000 to 7,400 sf. This alternative would result in up to 858 LDR units (with school) to 930 LDR units (without school) and up to 272 HDR units (with or without school), for a total of 1,130 units (with school) to 1,202 units (without school). This would result in a reduction of 283 (with school) to 301 (without school) units when compared to the proposed Project. The 10.5-acre commercial area in the northwest portion of the Project site would be eliminated. This would eliminate a 70,000-sf grocery store, 22,000 sf of retail shops, a 3,500-sf quick service restaurant, a 3,500-sf convenience store with attached fueling facility, and a 2,500-sf wine tasting room. This alternative would still establish a site for a 14.7-acre K-8 school to be developed by the LUSD. However, if the LUSD decides against the K-8 school siting, the area will instead include the development of single family residential units.

STATE OF CALIFORNIA – CALIFORNIA NATURAL RESOURCES AGENCY EDMUND G. BROWN JR., GOVERNOR

CENTRAL VALLEY FLOOD PROTECTION BOARD
3310 El Camino Ave., Ste. 170
SACRAMENTO, CA 95821
(916) 574-0609 FAX: (916) 574-0682

July 17, 2017

Mr. Brian Millar
City of Stockton
345 N. El Dorado Street
Stockton, California 95202

Subject: CEQA Comments: Tra Vigne Development Project, Notice of Preparation, SCH No.: 2016022061

Location: San Joaquin County

Dear Mr. Millar,

Central Valley Flood Protection Board (Board) staff has reviewed the subject document and provides the following comments:

The proposed project is within Bear Creek, a regulated stream under Board jurisdiction, and may require a Board permit prior to construction.

The Board's jurisdiction covers the entire Central Valley including all tributaries and distributaries of the Sacramento and San Joaquin Rivers, and the Tulare and Buena Vista basins south of the San Joaquin River.

Under authorities granted by California Water Code and Public Resources Code statutes, the Board enforces its Title 23, California Code of Regulations (Title 23) for the construction, maintenance, and protection of adopted plans of flood control, including the federal-State facilities of the State Plan of Flood Control, regulated streams, and designated floodways.

Pursuant to Title 23, Section 6 a Board permit is required prior to working within the Board's jurisdiction for the placement, construction, reconstruction, removal, or abandonment of any landscaping, culvert, bridge, conduit, fence, projection, fill, embankment, building, structure, obstruction, encroachment, excavation, the planting, or removal of vegetation, and any repair or maintenance that involves cutting into the levee.

Permits may also be required to bring existing works that predate permitting into compliance with Title 23, or where it is necessary to establish the conditions normally imposed by permitting. The circumstances include those where responsibility for the works has not been clearly established or ownership and use have been revised.

Other federal (including U.S. Army Corps of Engineers Section 10 and 404 regulatory permits), State and local agency permits may be required and are the applicant's responsibility to obtain.

Board permit applications and Title 23 regulations are available on our website at http://www.cvfpb.ca.gov/. Maps of the Board's jurisdiction are also available from the California Department of Water Resources website at http://gis.bam.water.ca.gov/bam/.

Please contact James Herota at (916) 574-0651, or via email at James.Herota@CVFlood.ca.gov if you have any questions.

Sincerely,

Andrea Buckley
Environmental Services and Land Management Branch Chief

RECEIVED
JUL 3 1 2017
CITY OF STOCKTON
COMMUNITY DEVELOPMENT DEPT.

July 18, 2017

Regulatory Division (SPK-2017-00565)

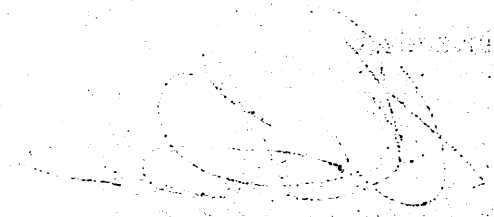
City of Stockton
Attn: Mr. Brian Miller
345 North El Dorado Street
Stockton, California 95202

Dear Mr. Miller:

We are responding to your July 7, 2017, request for comments on the Tra Vigne Development Project. The State Clearinghouse project identification number is SCH 2016022061. The approximately 341.17-acre project site is located along the northern shore of Bear Creek, East of Stockton, and West of Highway 99, Latitude 38.053349°, Longitude -121.288380°, in the City of Stockton, San Joaquin County, California.

The Army Corps of Engineers' jurisdiction within the study area is under the authority of Section 404 of the Clean Water Act for the discharge of dredged or fill material into waters of the United States. Waters of the United States include, but are not limited to, rivers, perennial or intermittent streams, lakes, ponds, wetlands, vernal pools, marshes, wet meadows, and seeps. Project features that result in the discharge of dredged or fill material into waters of the United States will require Department of the Army authorization prior to starting work.

To ascertain the extent of waters on the project site, the applicant should prepare a wetland delineation, in accordance with the "Minimum Standards for Acceptance of Preliminary Wetlands Delineations" and "Final Map and Drawing Standards for the South Pacific Division Regulatory Program" under "Jurisdiction" on our website at the address below, and submit it to this office for verification. A list of consultants that prepare wetland delineations and permit application documents is also available on our website at the same location.



The range of alternatives considered for this project should include alternatives that avoid impacts to wetlands or other waters of the United States. Every effort should be made to avoid project features which require the discharge of dredged or fill material into waters of the United States. In the event it can be clearly demonstrated there are no practicable alternatives to filling waters of the United States, mitigation plans should be developed to compensate for the unavoidable losses resulting from project implementation.

RECEIVED

Please refer to identification number SPK-2017-00565 in any correspondence concerning this project. If you have any questions, please contact Ms. Chandra Browne at the letterhead address above, by email at *Chandra.L.Browne@usace.army.mil*, or telephone at (916) 557-6652. For more information regarding our program, please visit our website at *www.spk.usace.army.mil/Missions/Regulatory.aspx*.

Sincerely,

Chandra L. Browne,
Project Manager
California Delta Section
Regulatory Division

WATERLOO MORADA FIRE DISTRICT
6925 E Foppiano Lane
Stockton, CA 95212
(209) 931-3107

August 6, 2017

Brian Millar
Project Manager
City of Stockton
345 N El Dorado Street
Stockton, CA 95202

Mr. Millar,

We are in receipt of the Notice of Preparation for the Tra Vigne Development Project sent by your office to the Board of Directors. We have been made aware of the 30-day public review period commencing on July 7, 2017.

The Board of Directors currently have the following concerns related to this annexation of property served by the Waterloo Morada Fire District (WMFD)

Our annual budget is approximately $2.9 million dollars, 87% of those funds come from property taxes. As stated in the Waterloo Morada Rural County Fire Protection District Financial Statements and Independent Auditors' Report of June 2016, the District is in a negative fund balance of $320,583.00.

Our current staffing is at the 2003 levels of service. Any further reductions due to the District's deficit will cause us to only staff fire engines with one person. Due to annexations by the City of Stockton we have closed our Station 2, without the financial ability to replace it, causing delayed responses into that area. We are attempting to find creative ways of re-opening the much needed station and increase staffing.

- The area of land proposed for annexation will cause a loss of property tax revenue to the fire district of $14,866.64 annually. (see attachment)

- Creation of an island that would still be served by WMFD

We, as Board Members have the responsibility to provide the best level of fire and EMS services that we can with the revenues provided to us by our customers.

Respectfully,

Clay Titus
Board President

WATERLOO MORADA FIRE DISTRICT

Re: Tra Vigne Development Project
SCH# 2016022061

Attached for your review and comment is the Notice of Preparation (NOP) for the Tra Vigne Development Project draft Environmental Impact Report (EIR).

Responsible agencies must transmit their comments on the scope and content of the NOP, focusing on specific information related to their own statutory responsibility, within 30 days of receipt of the NOP from the Lead Agency. This is a courtesy notice provided by the State Clearinghouse with a reminder for you to comment in a timely manner. We encourage other agencies to also respond to this notice and express their concerns early in the environmental review process.

Please direct your comments to:

Brian Millar
City of Stockton
Community Development Department
345 N. El Dorado Street
Stockton, CA 95202

with a copy to the State Clearinghouse in the Office of Planning and Research. Please refer to the SCH number noted above in all correspondence concerning this project.

If you have any questions about the environmental document review process, please call the State Clearinghouse at (916) 445-0613.

Sincerely,

Scott Morgan
Director, State Clearinghouse

Project Title Tra Vigne Development Project
Lead Agency Stockton, City of

Type NOP Notice of Preparation

Description The project includes up to 340 HDR units, up to 1,153 LDR units, up to 101,500 sq. ft. of commercial, an existing 15.57 acre industrial area, establishment of a 14.7 acre K-8 school site, and associated park and utility improvements. The project is requesting annexation of 341.17 acres of land into the Stockton city limits, and the subsequent development of 318.82 acres of land. The General Plan Amendment would include maintaining approx. 260.69 acres of LDR uses; maintaining approx. 15.57 acres of I uses; changing approx. 1.5 acres of LDR to C uses; changing approx. 1.03 acres of LDR to HDR uses; and changing 20.36 acres of LDR to OSA. Changes to the Circulation Element would include the removal of a bridge crossing over Bear Creek. Prezoning would include: RL, RH, IL, CG, and OS.

SUBJECT: NOTICE PREPARATION OF A DRAFT ENVIRONMENTAL IMPACT REPORT FOR THE TRA VIGNE DEVELOPMENT PROJECT

Dear Mr. Millar,

The San Joaquin County Department of Public Works has reviewed the Notice of Preparation and Draft Environmental Impact Report for the above referenced project and our comments are as follows:

Road Maintenance

1. The City of Stockton needs to annex Eight Mile Road from the Union Pacific Railroad Tracks to West Lane and West Lane from Bear Creek to Eight Mile Road.

Transportation Engineering

1. The Site Plans in Figure 8a and 8c show a proposed signal at future Road C. Per the 1993 Specific Plan for Eight Mile Road, no signal is allowed between West Lane and Ham Lane. This either needs to be evaluated without a signal (right-in/right-out only) in the EIR, or the Eight Mile Specific Plan will need to be revised accordingly. Any other improvements to Eight Mile Road not specifically mentioned above shall conform to the Specific Plan.
2. All of West Lane, including the Bear Creek bridge, and all of Eight Mile Road adjacent to the proposed development must be annexed by the City of Stockton. No gap shall remain between the existing City limits and the Project's acquisition.
3. The EIR shall fully analyze the impacts (and potential contribution) of this project to the SR 99/March Lane interchange, development of which is currently on hold by the City of Stockton.
4. Figure 8c appears to show the full build-out of 8 Mile Road per the specific plan (with the exception of the signal at Road C as previously noted). This would require the acquisition of ROW for County properties to the North of 8 Mile Road. The EIR needs to clearly document what improvements will be required at what time, and who will be responsible for any ROW acquisition beyond the boundaries of the Project.

The County does request to be included on the circulation list for any additional project documents.

Thank you for the opportunity to review and comment. Should you have questions please contact me at atmcginnis@sjgov.org or (209) 468-3085.

Sincerely,

ASHLEN MCGINNIS
Environmental Coordinator

Re: Tra Vigne Development Project (Deadline: 8/7/17)

Dear Brian Millar,

The San Joaquin Council of Governments (SJCOG), acting as the Airport Land Use Commission (ALUC) and Congestion Management Agency (CMA), has reviewed a Notice Of Preparation for a Draft Environmental Impact Report for project that accommodates up to 1,163 single-family residential units, up to 340 high density residential units, up to 101,500 square feet of commercial uses, up to 20.36 acres of non-traditional park area, up to 5.07 acres of traditional park area, 14.7-acre K-8 school, and expansion of the existing vehicular/non-vehicular circulation system at southeast corner of West Lane and Eight Mile Road, Stockton (APN: 120-02-13 & 14).

CONGESTION MANAGEMENT AGENCY'S REVIEW

SJCOG adopted the 2016 Update to the Regional Congestion Management Program (RCMP) (http://www.sjcog-rcmp.org/ literature 231152/2016 RCMP Update Adopted Report) on March 24, 2016). Chapter 6 of the RCMP describes the updated Land Use Analysis Program, including Tier 1 and Tier 2 review/analysis requirements, analysis methods, impact significance criteria, and mitigation.

A map showing the project's relationship to the RCMP network is attached (Attachment A) and RCMP significance threshold criteria and potential mitigation measures can be found in sections 6.3 & 6.4 of the 2016 RCMP.

As stipulated within the RCMP Project Review Criteria in Chapter 6 of the 2016 RCMP, the project is required to show consistency with all applicable regional transportation planning documents, such as:

- Regional Transportation Demand Management Plan

- Park-and-Ride Master Plan
- Regional Bicycle, Pedestrian, and Safe Routes to School Master Plan
- Regional Smart Growth Transit Oriented Development Plan
- Regional Transit Systems Plan
- Regional Transportation Impact Fee Program
- 2014 Regional Transportation Plan/Sustainable Communities Strategy
- Interregional STAA Study for I-5 and SR-99

SJCOG staff is available to assist with project specific guidance and narrowing the scope of the relevant regional plans that need to be included. Additionally, SJCOG has completed updating the RCMP including traffic count data of all the segments and intersections on the CMP network. SJCOG would be pleased to provide this data to the City and its consultants to assist in the traffic analysis for this project.

AIRPORT LAND USE COMMISION'S REVIEW

This project is not located within an Airport's influence area; thus, no further action is required.

SJCOG would like to provide standards and project design conditions that comply with the Airport Land Use Compatibility Plan as a reference guide.

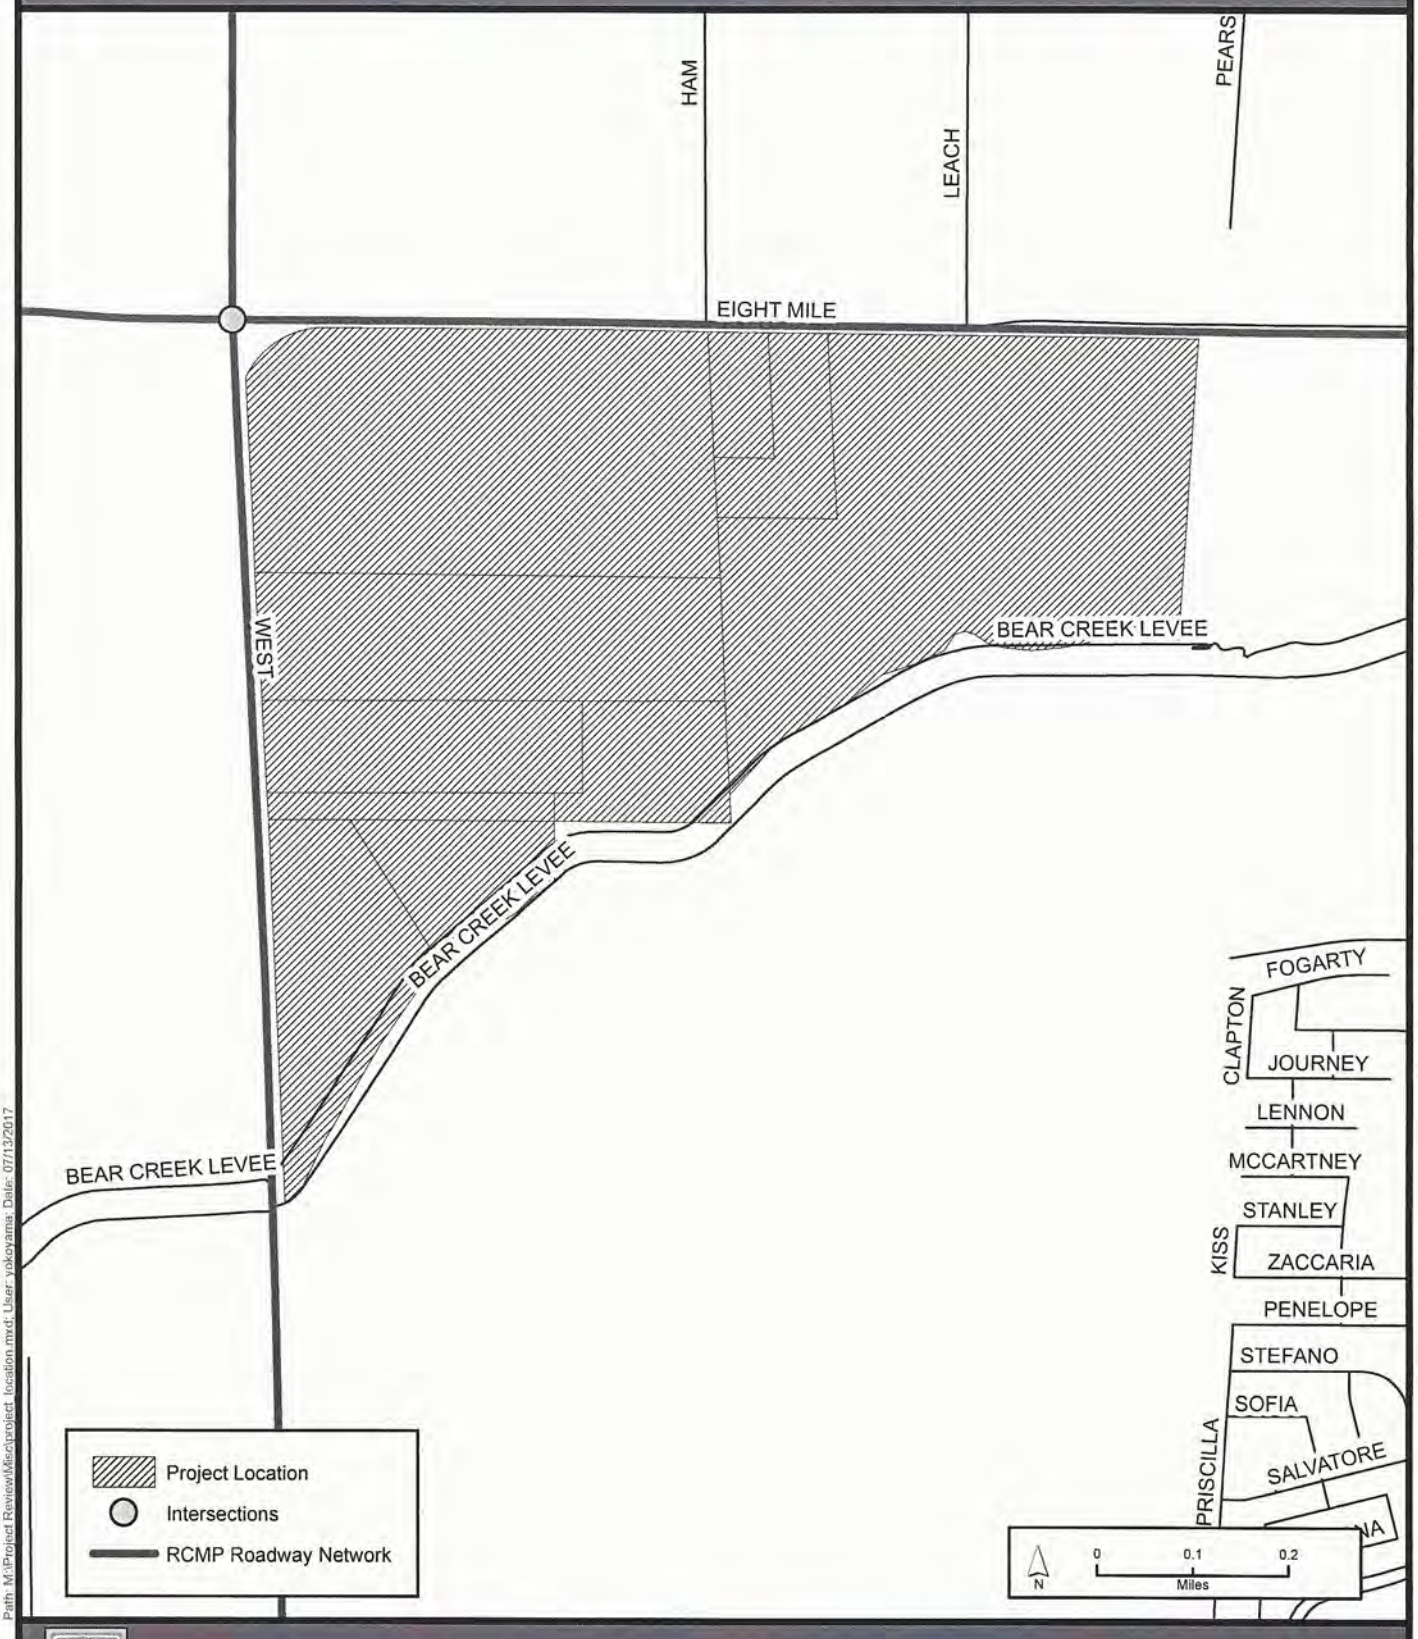
1. New land uses that may cause visual, electronic, or increased bird strike hazards to aircraft in flight shall not be permitted within any airport's influence area. Specific characteristics to be avoided include:
    a. Glare or distracting lights which could be mistaken for airport lights. Reflective materials are not permitted to be used in structures or signs (excluding traffic directing signs).
    b. Sources of dust, steam, or smoke which may impair pilot visibility.
    c. Sources of electrical interference with aircraft communications or navigation. No transmissions which would interfere with aircraft radio communications or navigational signals are permitted.
    d. Occupied structures must be soundproofed to reduce interior noise to 45 decibel(dB) according to State guidelines.
    e. Within the airport's influence area, ALUC review is required for any proposed object taller than 100 feet above ground level (AGL).
2. Regardless of location within San Joaquin County, ALUC review is required in addition to Federal Aviation Administration (FAA) notification in accordance with Code of Federal Regulations, Part 77, (https://oeaaa.faa.gov/oeaaa/external/portal.jsp) for any proposal for construction or alteration under the following conditions:

    a. If requested by the FAA.
    b. Any construction or alteration that is more than 200 ft. AGL at its site.
    c. Any construction or alteration that exceeds an imaginary surface extending outward and upward at any of the following slopes:
    d. 100 to 1 for a horizontal distance of 20,000 ft. of a public use or military airport from any point on the runway of each airport with its longest runway more than 3,200 ft.
    e. 50 to 1 for a horizontal distance of 10,000 ft. of a public use or military airport from any point on the runway of each airport with its longest runway no more than 3,200 ft.
    f. 25 to 1 for a horizontal distance of 5,000 ft. of the nearest take off and landing area of a

public use heliport

g. Any highway, railroad or other traverse way whose prescribed adjusted height would exceed the above noted standards
h. Any construction or alteration located on a public use airport or heliport regardless of height or location.

Thank you again for the opportunity to comment. Please contact CMA and ALUC staff Travis Yokoyama (209-235-0451 or yokoyama@sjcog.org) if you have any questions or comments.



Sincerely,

Travis Yokoyama

LEGAL DESCRIPTION

ALL that certain real property, situate in and being a portion of the Northwest quarter of Section 2, Township 2 North, Range 6 East, Mount Diablo Meridian, County of San Joaquin, State of California, being more particularly described as follows:

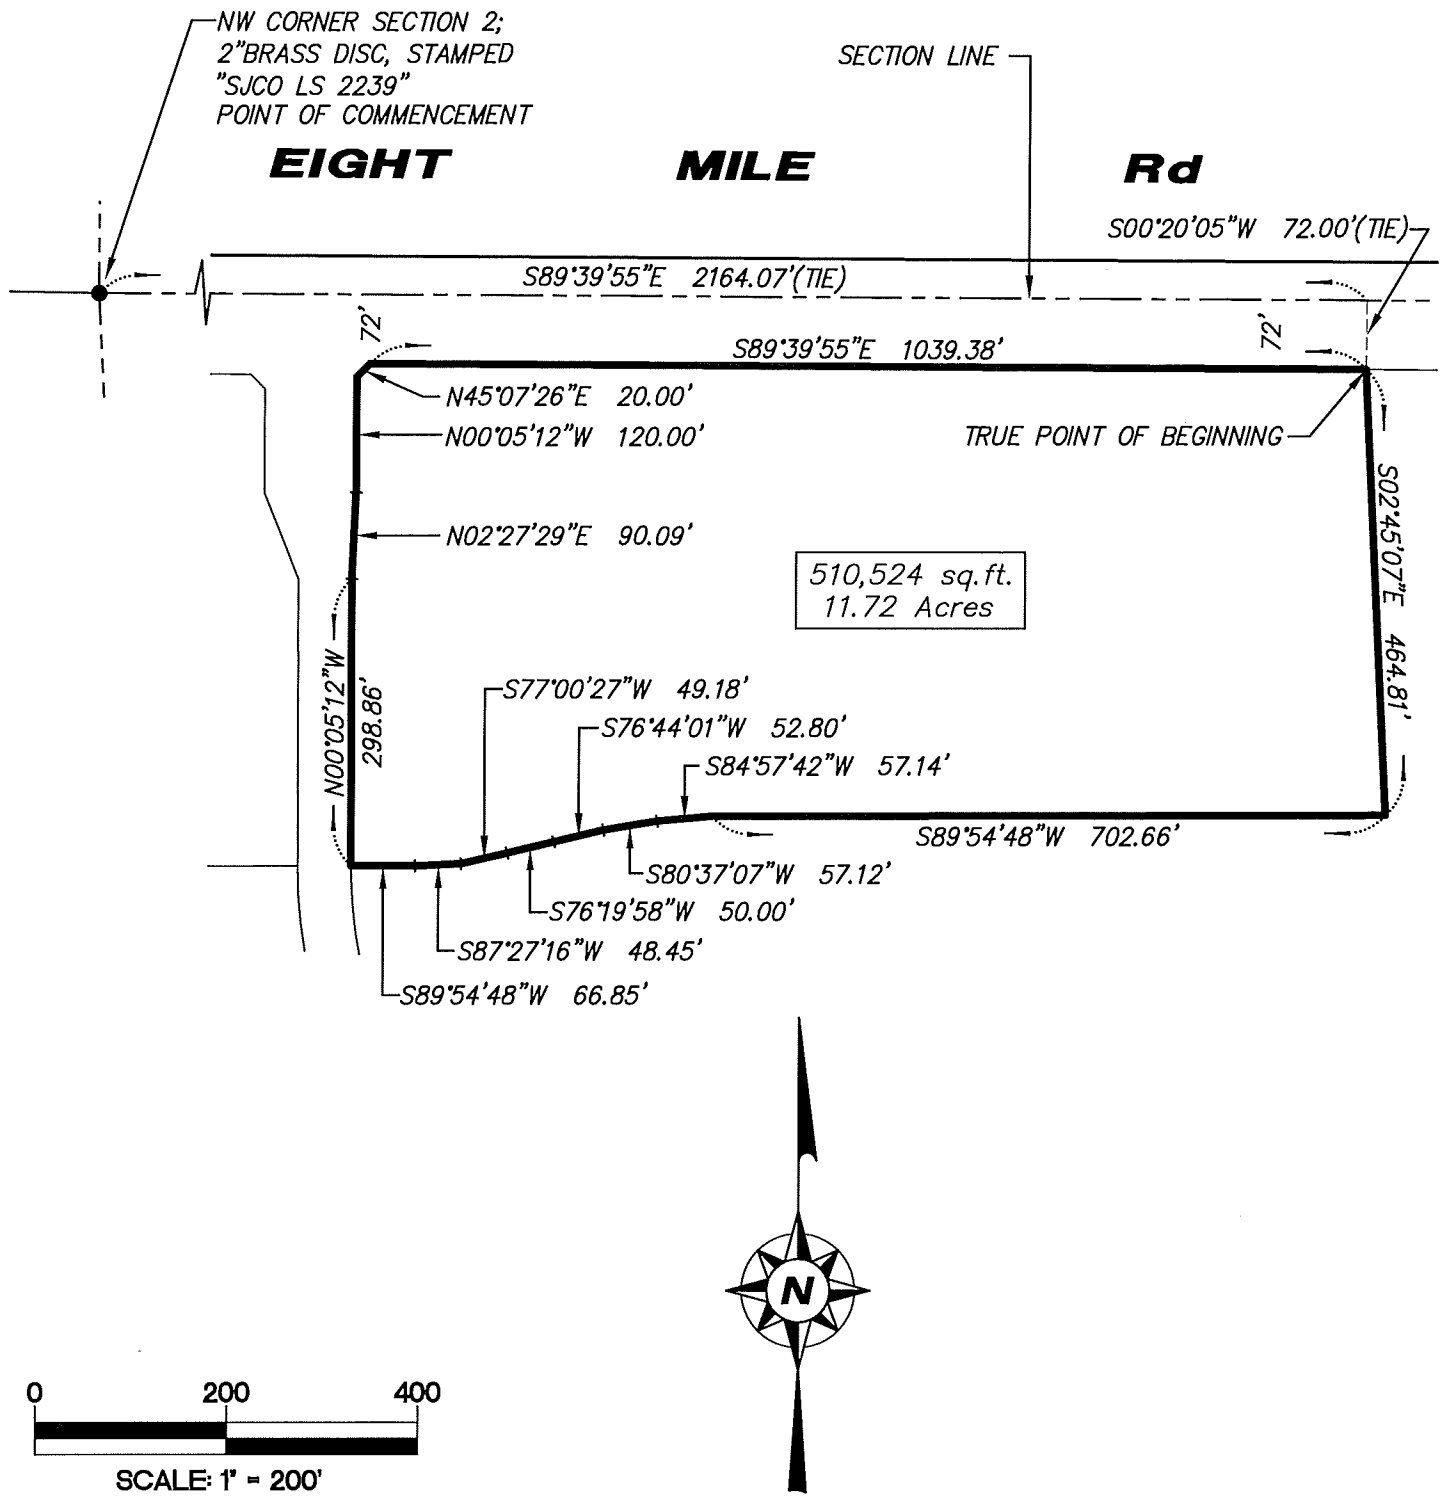
COMMENCING at the Northwest corner of said Section 2, said corner being marked with a 2" brass disc, stamped "SJCO LS 2239";
thence along the North line of said Section 2 South 89°39'55" East 2164.07 feet; thence South 00°20'05" West 72.00 feet to the TRUE POINT OF BEGINNING;
thence South 02°45'07" East 464.81 feet;
thence South 89°54'48" West 702.66 feet;
thence South 84°57'42" West 57.14 feet;
thence South 80°37'07" West 57.12 feet;
thence South 76°44'01" West 52.80 feet;
thence South 76°19'58" West 50.00 feet;
thence South 77°00'27" West 49.18 feet;
thence South 87°27'16" West 48.45 feet;
thence South 89°54'48" West 66.85 feet;
thence North 00°05'12" West 298.86 feet;
thence North 02°27'29" East 90.09 feet;
thence North 00°05'12" West 120.00 feet;
thence North 45°07'26" East 20.00 feet to a point, which is 72.00 feet distant at right angles from said North line;
thence parallel with said North line South 89°39'55" East 1039.38 feet to the Point of Beginning.

Containing 510,524 square feet (11.72 acres), more or less.

A grid bearing of North 72°20'31" East between found City of Stockton Monuments "4N-8" and "9N-18" was used as a basis for all bearings. Distances shown are ground distances.

This legal description as described is delineated on the accompanying "Plat to Accompany Legal Description" and made a part hereof for reference purposes.



This legal description was prepared as a convenience only and is not intended for use in the division and/or conveyance of land in violation of the Subdivision Map Act of the State of California.

LEGAL DESCRIPTION

TRA VIGNE ANNEXATION
TO THE CITY OF STOCKTON,
SAN JOAQUIN COUNTY, CALIFORNIA

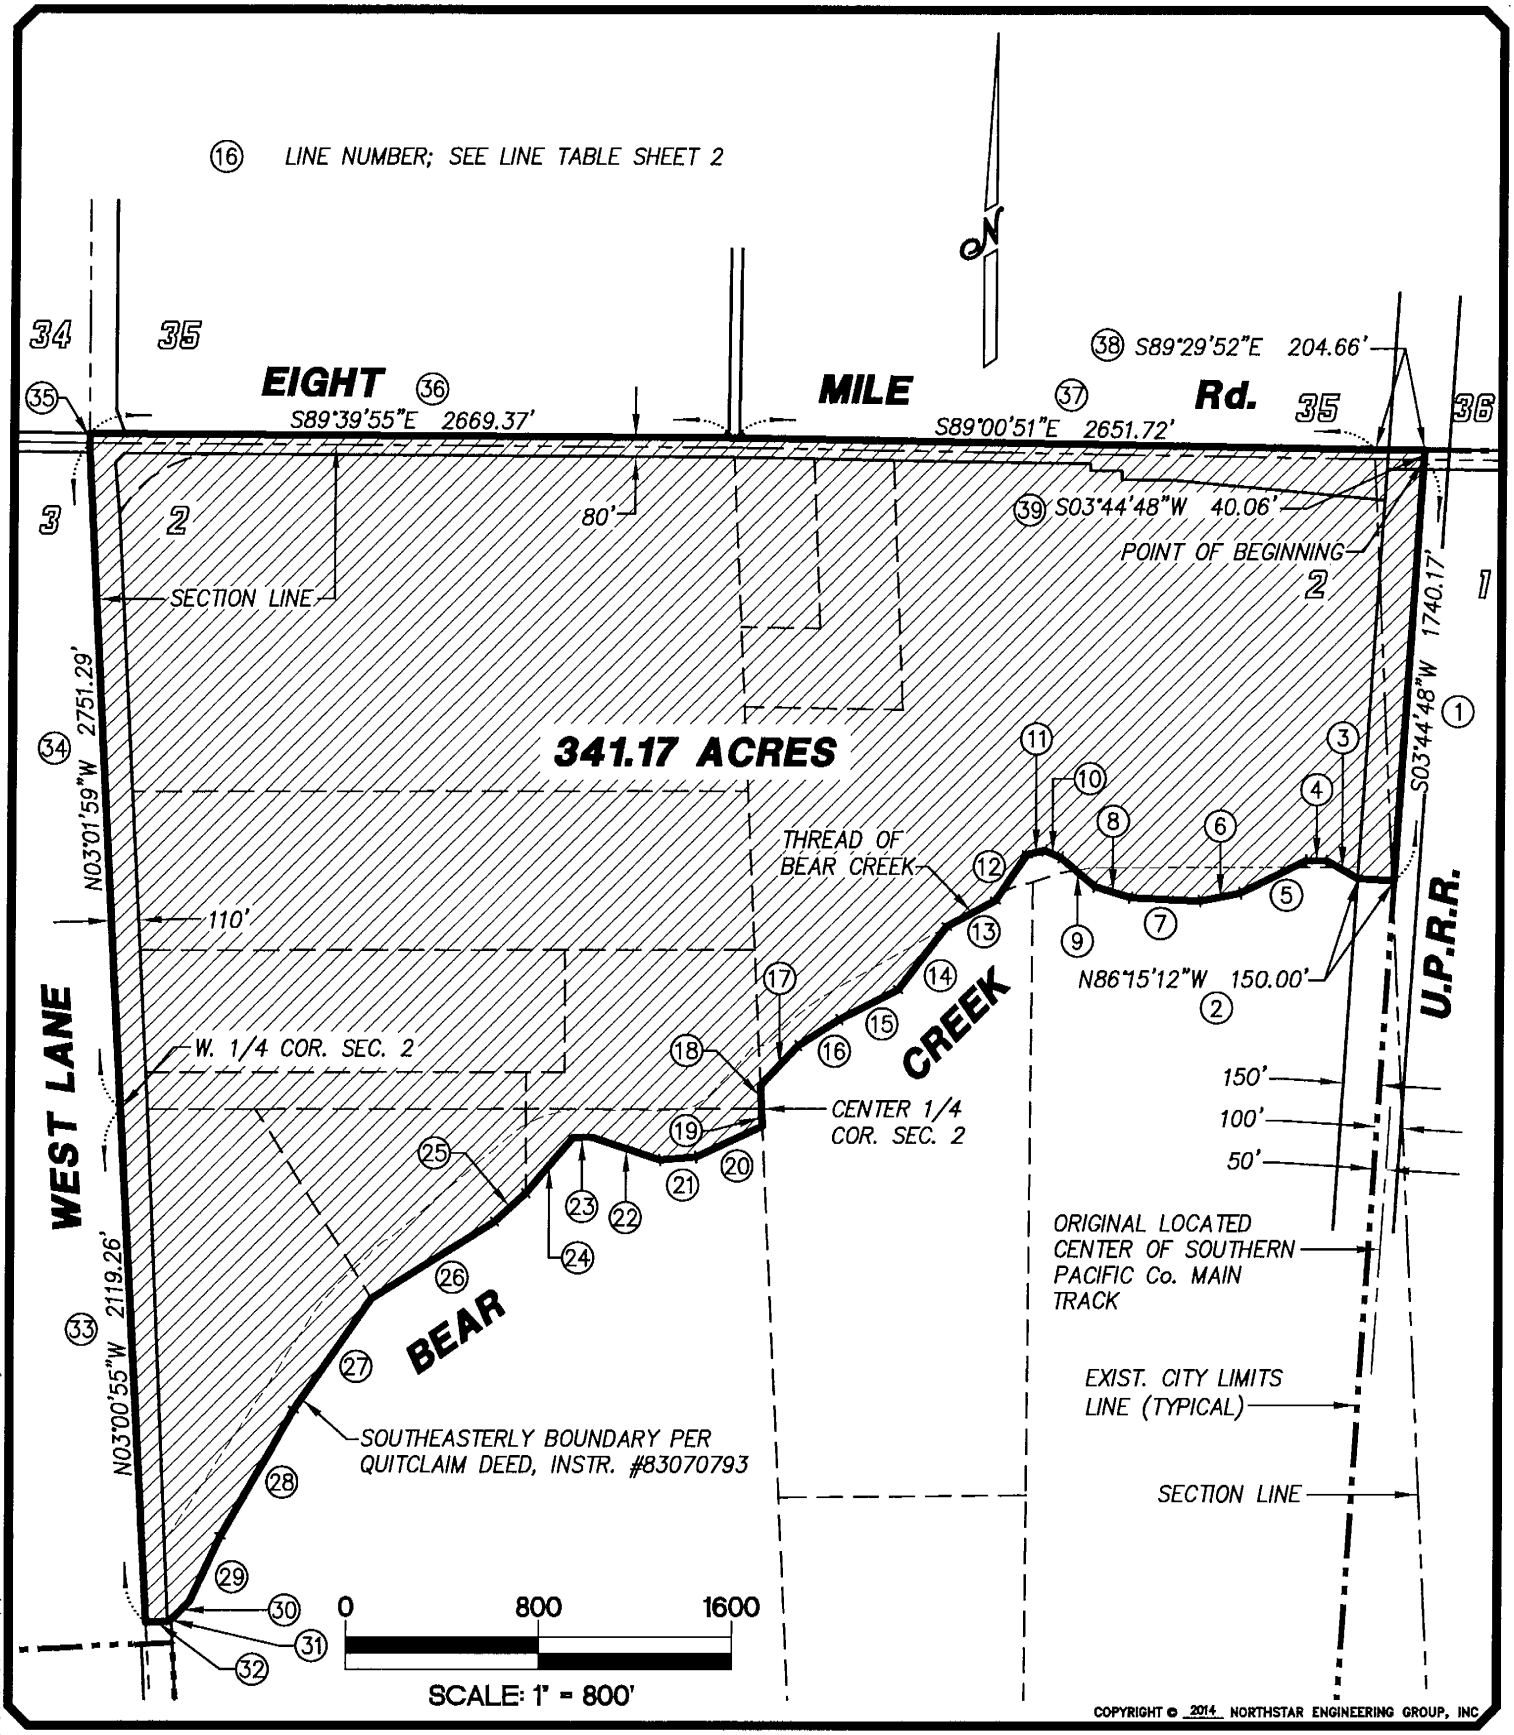
ALL that certain real property, being portions of Sections 1, and 2, Township 2 North, Range 6 East, and Sections 35 and 36, Township 3 North, Range 6 East, Mount Diablo Meridian, County of San Joaquin, State of California, being more particularly described as follows:

BEGINNING at a point on the North line of said Section 1, said Point of Beginning being 50.00 feet distant at right angles from the original located center of Southern Pacific Company's main track and being a point on the existing City Limits line of the City of Stockton, also said Point of Beginning bears South 89°29'52" East, 202.56 feet from the Northeast corner of said Section 2;

1. thence along said existing City Limits line, South 03°44'48" West, a distance of 1740.17 feet;
2. thence leaving said existing City Limits line and proceeding North 86°15'12" West, a distance of 150.00 feet to a point on the existing thread of Bear Creek, last said point being 200.00 feet distant at right angles from said original located center of Southern Pacific Company's main track;
3. thence along said thread of Bear Creek the following fifteen (15) courses:
   North 60°51'12" West, a distance of 146.89 feet
4. North 88°27'12" West, a distance of 86.78 feet;
5. South 63°07'48" West, a distance of 297.56 feet;
6. South 78°46'48" West, a distance of 173.60 feet;
7. North 87°07'12" West, a distance of 285.17 feet;
8. North 73°04'12" West, a distance of 153.97 feet;
9. North 49°51'12" West, a distance of 187.36 feet;
10. North 66°43'12" West, a distance of 73.31 feet;
11. South 76°50'48" West, a distance of 74.27 feet;
12. South 34°25'48" West, a distance of 231.07 feet;
13. South 61°59'48" West, a distance of 227.52 feet;
14. South 37°28'48" West, a distance of 328.76 feet;
15. South 62°58'48" West, a distance of 272.00 feet;
16. South 57°28'48" West, a distance of 201.25 feet;
17. South 43°19'48" West, a distance of 225.40 feet to a point on the North-South centerline of said Section 2;
18. thence leaving said thread and proceeding along said North-South centerline, South 02°45'07" East, a distance of 97.52 feet to the center ¼ corner of said Section 2;
19. thence continuing along said North-South centerline, South 02°45'07" East, a distance of 70.77 feet to a point on the Southeasterly boundary of that certain property described in a Quitclaim Deed dated September 27, 1983, as Instrument Number 83070793, San Joaquin County Records;
20. thence along said Southeasterly boundary the following twelve (12) courses:

South 64°49'23" West, a distance of 303.19 feet;
21. South 85°34'23" West, a distance of 150.00 feet;
22. North 71°40'37" West, a distance of 300.00 feet;
23. South 87°19'23" West, a distance of 75.00 feet;
24. South 40°24'23" West, a distance of 300.00 feet;
25. South 47°49'23" West, a distance of 175.00 feet;
26. South 58°04'23" West, a distance of 600.00 feet;
27. South 34°54'23" West, a distance of 560.00 feet;
28. South 29°59'23" West, a distance of 600.00 feet;
29. South 25°34'23" West, a distance of 300.00 feet;
30. South 45°04'23" West, a distance of 100.00 feet;
31. South 58°04'23" West, a distance of 22.25 feet to a point on the Easterly right-of-way line of West Lane;
32. thence South 86°59'05" West, a distance of 89.89 feet to a point on the West line of said Section 2;
33. thence along last said West line, North 03°00'55" West, a distance of 2119.26 feet to the West ¼ corner of said Section 2;
34. thence continuing along said West line of Section 2, parallel and 110.00 feet distant at right angles from said Easterly right-of-way line, North 03°01'59" West, a distance of 2751.29 feet to the Northwest corner of said Section 2;
35. thence along the West line of said Section 35, North 00°00'59" East, a distance of 40.00 feet to a point on the North line of Eight Mile Road (80 feet wide);
36. thence along said North right-of-way line the following three (3) courses:
South 89°39'55" East, a distance of 2669.37 feet;
37. South 89°00'51" East, a distance of 2651.72 feet;
38. South 89°29'52" East, a distance of 204.66 feet to a point which is 50.00 feet distant at right angles from aforesaid original located center of Southern Pacific Company's main track, being also a point on aforesaid existing City Limits line of the City of Stockton;
39. thence along said existing City Limits line, South 03°44'48" West, a distance of 40.06 feet to the Point of Beginning.

Containing 341.17 acres, more or less.



A grid bearing of North 72°20'31" East between found City of Stockton Monuments "4N-8" and "9N-18" was used as a basis for all bearings.

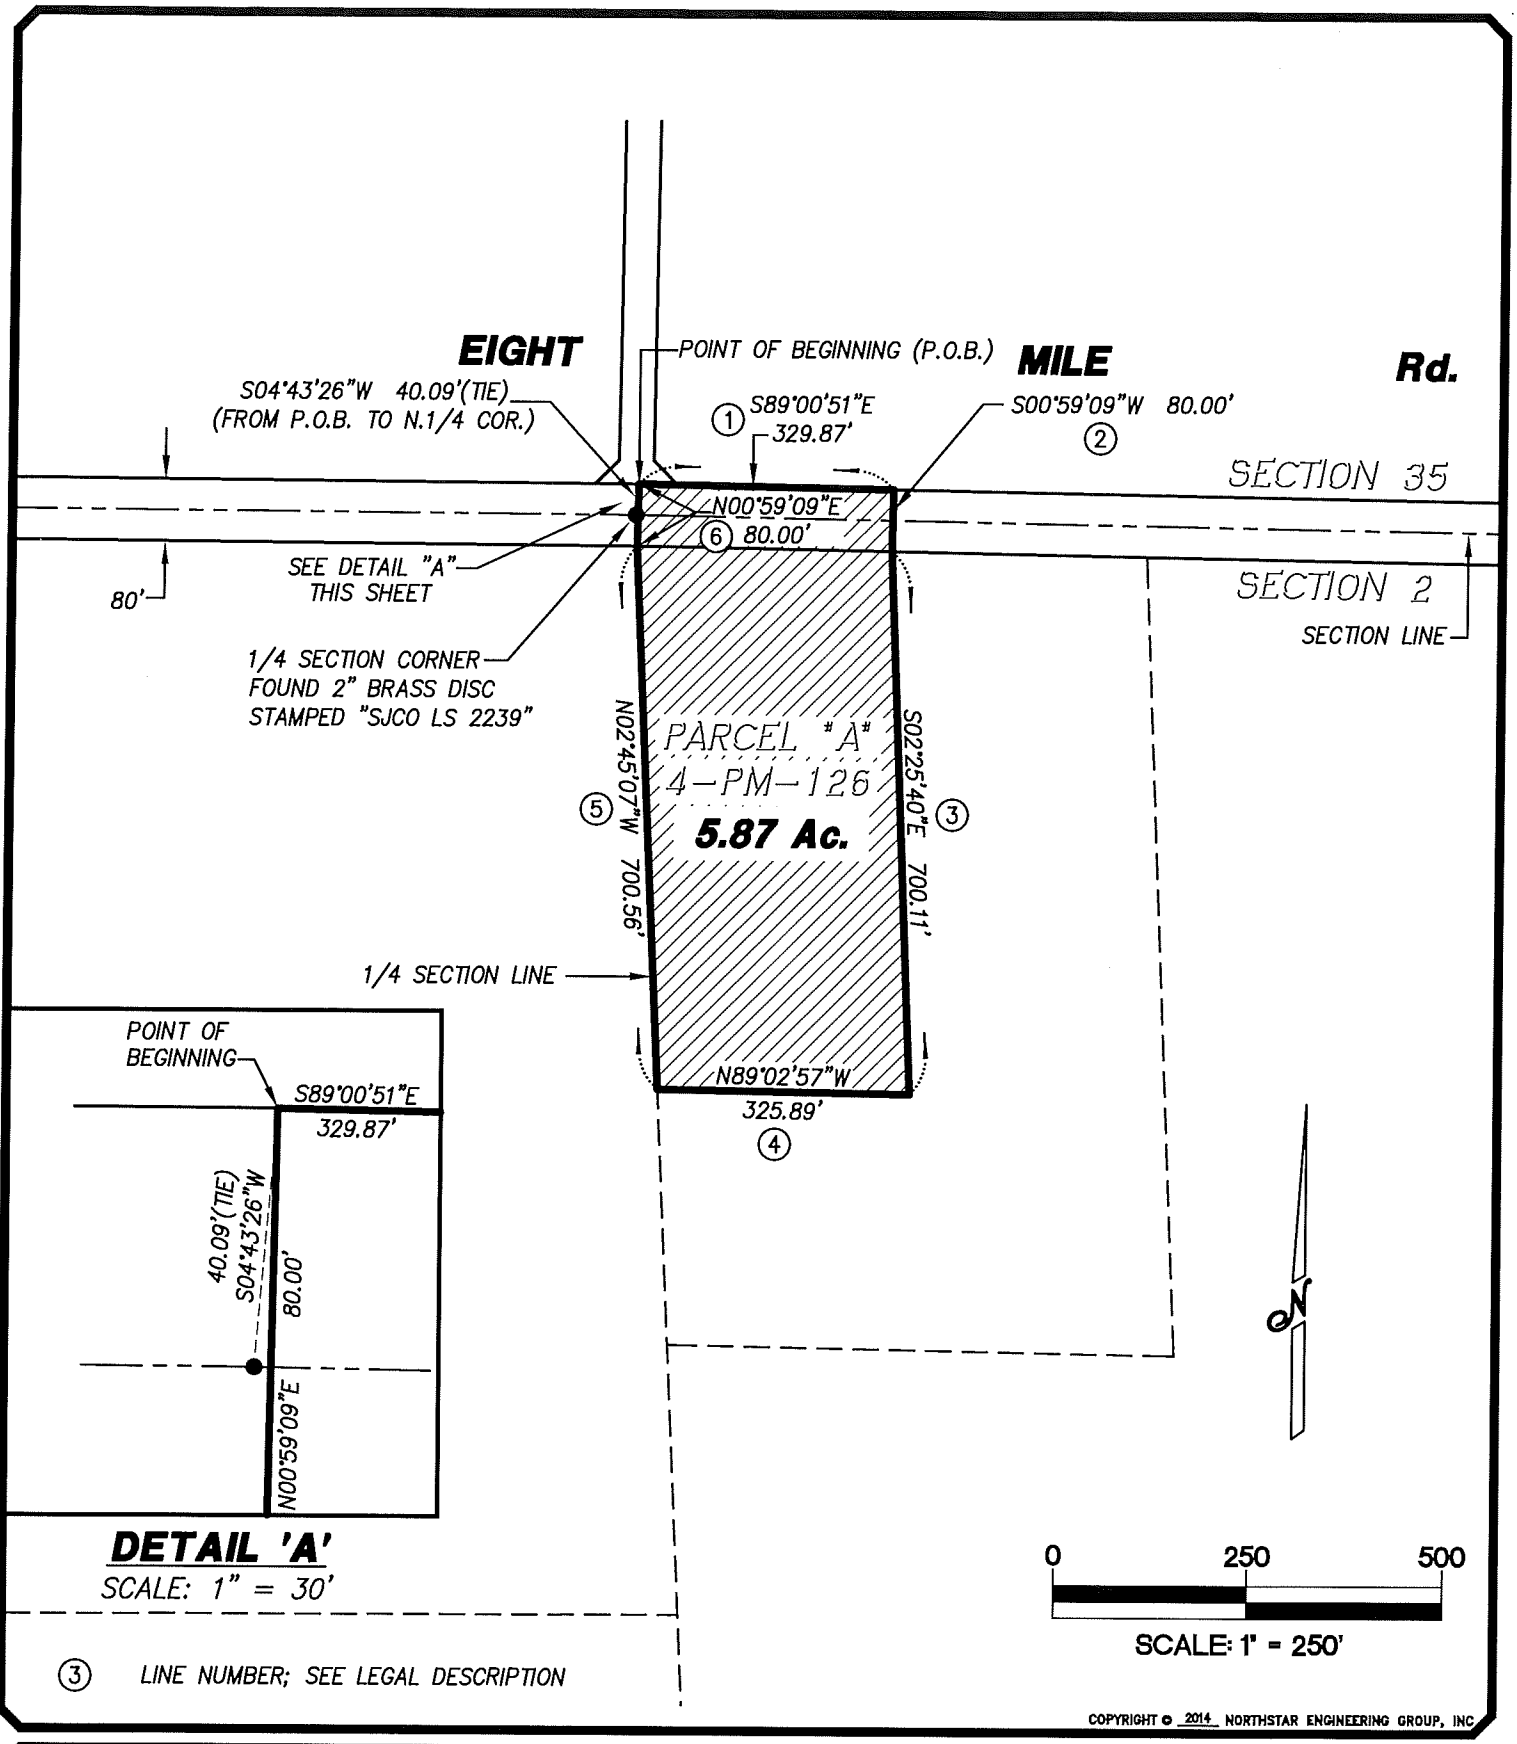
PACIFIC BELL ANNEXATION
TO THE CITY OF STOCKTON,
SAN JOAQUIN COUNTY, CALIFORNIA

ALL that certain real property, being portions of Section 2, Township 2 North, Range 6 East, and Section 35, Township 3 North, Range 6 East, Mount Diablo Meridian, County of San Joaquin, State of California, being more particularly described as follows:

BEGINNING at a point on the North right-of-way line of Eight Mile Road (80 feet wide), from which the common quarter corner of said Sections 35 and 2 bears South 04°43'26" West 40.09 feet;

1. thence along said North right-of-way line South 89°00'51" East, a distance of 329.87 feet;
2. thence leaving said North right-of-way line and proceeding South 00°59'09" West, a distance of 80.00 feet to a point on the South right-of-way line of said Eight Mile Road (80 feet wide), last said point being also the Northeast corner of Parcel "A", as shown on a certain map, filed for record on June 1st, 1977 in Book 4 of Parcel Maps, at Page 126, San Joaquin County Records;
3. thence leaving said South right-of-way line and proceeding along the East line of said Parcel "A", South 02°25'40" East, a distance of 700.11 feet to the Southeast corner of said Parcel "A";
4. thence along the South line of said Parcel "A", North 89°02'57" West, a distance of 325.89 feet to the Southwest corner of said Parcel "A", said Southwest corner being also a point on the North-South centerline of said Section 2;
5. thence along the West line of said Parcel "A" and said North-South centerline, North 02°45'07" West, a distance of 700.56 feet to the Northwest corner of said Parcel "A", last said corner being also a point on said South right-of-way line;
6. thence North 00°59'09" East, a distance of 80.00 feet to the Point of Beginning.

Containing 5.87 acres, more or less.



A grid bearing of North 72°20'31" East between found City of Stockton Monuments "4N-8" and "9N-18" was used as a basis for all bearings.

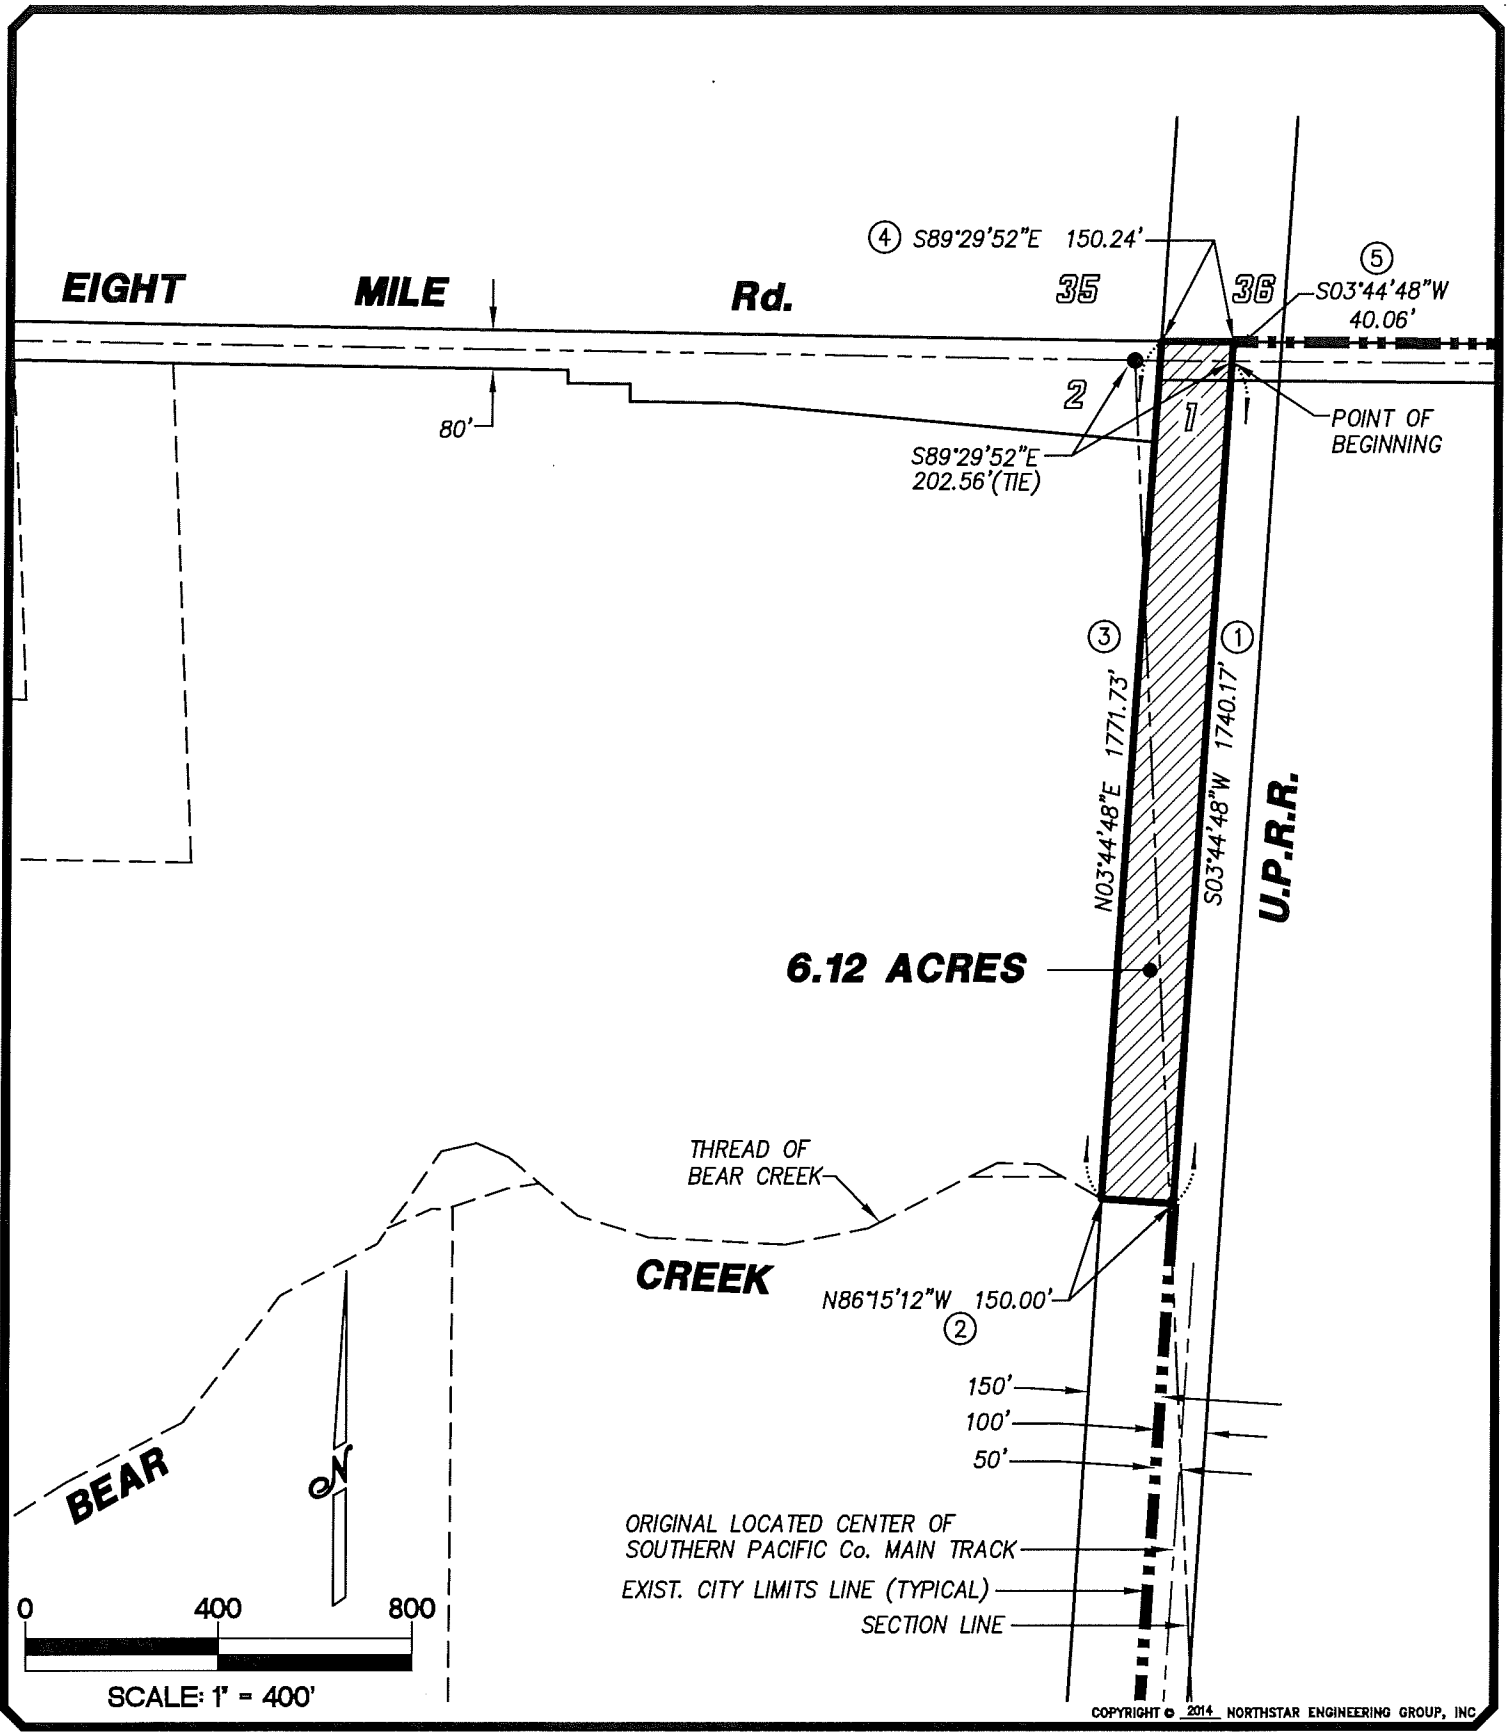
LEGAL DESCRIPTION

UNION PACIFIC RAIL ROAD ANNEXATION TO THE CITY OF STOCKTON, SAN JOAQUIN COUNTY, CALIFORNIA

ALL that certain real property, being portions of Sections 1, and 2, Township 2 North, Range 6 East, and Section 36, Township 3 North, Range 6 East, Mount Diablo Meridian, County of San Joaquin, State of California, being more particularly described as follows:

BEGINNING at a point on the North line of said Section 1, said Point of Beginning being 50.00 feet distant at right angles from the original located center of Southern Pacific Company's main track and being a point on the existing City Limits line of the City of Stockton, also said Point of Beginning bears South 89°29'52" East, 202.56 feet from the Northeast corner of said Section 2;

1. thence along said existing City Limits line, South 03°44'48" West, a distance of 1740.17 feet;
2. thence leaving said existing City Limits line and proceeding North 86°15'12" West, a distance of 150.00 feet to a point on the existing thread of Bear Creek, last said point being 200.00 feet distant at right angles from said original located center of Southern Pacific Company's main track;
3. thence parallel with said original located center of Southern Pacific Company's main track, North 03°44'48" East, a distance of 1771.73 feet to a point on the North right-of-way line of Eight Mile Road (80 feet wide);
4. thence along said North right-of-way line South 89°29'52" East, a distance of 150.24 feet to a point which is 50.00 feet distant at right angles from aforesaid original located center of Southern Pacific Company's main track, being also a point on aforesaid existing City Limits line of the City of Stockton;
5. thence along said existing City Limits line, South 03°44'48" West, a distance of 40.06 feet to the Point of Beginning.



Containing 6.12 acres, more or less.

A grid bearing of North 72°20'31" East between found City of Stockton Monuments "4N-8" and "9N-18" was used as a basis for all bearings.

Appendix C

Air Quality and Greenhouse Gas Modeling

Stockton Tra Vigne - Proposed Project - 2020

San Joaquin County, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Elementary School	750.00	Student	14.70	62,702.53	0
Apartments Low Rise	340.00	Dwelling Unit	11.70	340,000.00	1078
Single Family Housing	1,163.00	Dwelling Unit	245.99	2,093,400.00	3687
Regional Shopping Center	101.50	1000sqft	10.50	101,500.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.7	**Precipitation Freq (Days)**	51
Climate Zone	2			**Operational Year**	2020
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	290	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Stockton Tra Vigne - Proposed Project - 2020 - San Joaquin County, Annual

Project Characteristics - CO2 intensty factor as provided by PG&E:
https://www.pge.com/includes/docs/pdfs/shared/environment/calculator/pge_ghg_emission_factor_info_sheet.pdf

Land Use - Proposed GP land uses (10.5 C, 11.7 HDR, 260.69 ac LDR (minus 14.7 ac school). Pop 3.17/unit. Existing 15.57 I and 20.36 acres of OS not included. Assumes 90 units built on the school site--worst case scenario.

Vehicle Trips - Trip gen adjusted per traffic engineer. Trip lengths remain defaults.

Woodstoves -

Energy Use -

Land Use Change - 282.89 acres of initial cropland; 10.18 acres of grassland; 10.18 acres of wetlands

Sequestration - Assumes approx 1 front yard tree per SFR unit. Commercial site plan shows approx 150 trees within landscaping.

Mobile Land Use Mitigation -

Energy Mitigation -

Water Mitigation -

Construction Phase - Construction schedule estimated based on project type and size.

Grading - Maximum acres of grading = 283.68

Construction Off-road Equipment Mitigation - https://www.arb.ca.gov/msprog/ordiesel/faq/tierlifefaq.pdf

Stockton Tra Vigne - General Plan 2035 - 2020

San Joaquin County, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Apartments Low Rise	340.00	Dwelling Unit	11.70	340,000.00	1078
Single Family Housing	1,066.00	Dwelling Unit	260.69	2,093,400.00	3381
Regional Shopping Center	117.60	1000sqft	9.00	117,612.00	0
General Light Industry	406.90	1000sqft	15.70	406,937.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.7	**Precipitation Freq (Days)**	51
Climate Zone	2			**Operational Year**	2020
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	290	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Stockton Tra Vigne - General Plan 2035 - 2020 - San Joaquin County, Annual

Project Characteristics - CO2 intensty factor as provided by PG&E:
https://www.pge.com/includes/docs/pdfs/shared/environment/calculator/pge_ghg_emission_factor_info_sheet.pdf

Land Use - Proposed GP land uses (9.0 C, 11.7 HDR, 260.69 ac LDR = 245.99 ac LDR. Industrial = 15.7. 20.36 acres of OS not included. Assumes 90 units built on the school site--worst case scenario.

Construction Phase - Based on project size and type.

Grading - Acres of Grading (Grading Phase): 283.68

Vehicle Trips - Trip gen adjusted per traffic engineer. Trip lengths remain defaults.

Woodstoves -

Energy Use -

Land Use Change -

Sequestration - Assumes approx 1 front yard tree per SFR unit. Commercial site plan shows approx 150 trees within landscaping.

Construction Off-road Equipment Mitigation - Tier 2 Engines

Mobile Land Use Mitigation -

Energy Mitigation -

Water Mitigation -

Trips and VMT -

Regional Shopping Center	86.99	1000sqft	9.00	86,990.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.7	**Precipitation Freq (Days)**	51
Climate Zone	2			**Operational Year**	2005
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	489	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Stockton Tra Vigne - Proposed Project - 2005 - San Joaquin County, Annual

Project Characteristics - As provided by PG&E:
https://www.pge.com/includes/docs/pdfs/shared/environment/calculator/pge_ghg_emission_factor_info_sheet.pdf

Land Use - Land Use - Existing GP land uses (9.0 C, 10.67 HDR, 283.58 LDR (minus 20.36 ac of undevelopable LDR along Bear Creek and minus the 14.7 acre school). Existing 15.57 Industrial not included.

Construction Phase - Based on project size and type.

Off-road Equipment -

Grading - Maximum acres of grading = 283.68

Vehicle Trips -

Vehicle Emission Factors -

Vehicle Emission Factors -

Vehicle Emission Factors -

Woodstoves -

Area Coating -

Energy Use -

Land Use Change - Land Use Change - 282.89 acres of initial cropland; 10.18 acres of grassland; 10.18 acres of wetlands

Construction Off-road Equipment Mitigation -

Mobile Land Use Mitigation -

Area Mitigation -

Energy Mitigation -

Water Mitigation -

Waste Mitigation -

Architectural Coating -

Sequestration - Sequestration - Assumes approx 1 front yard tree per SFR unit (1,515 Mixed Hardwood)

Stockton Tra Vigne - Proposed Project - 2005 - San Joaquin County, Annual

Stockton Tra Vigne - Reduced Intensity/Density Alternative - 2020

San Joaquin County, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Elementary School	750.00	Student	14.70	62,702.53	0
Apartments Low Rise	272.00	Dwelling Unit	11.70	340,000.00	863
Single Family Housing	930.00	Dwelling Unit	245.99	2,093,400.00	2950

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.7	**Precipitation Freq (Days)**	51
Climate Zone	2			**Operational Year**	2020
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	290	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - CO2 intensty factor as provided by PG&E:
https://www.pge.com/includes/docs/pdfs/shared/environment/calculator/pge_ghg_emission_factor_info_sheet.pdf

Land Use - Proposed GP land uses (11.7 HDR, 260.69 ac LDR (minus 14.7 ac school). Pop 3.17/unit. Existing 15.57 I and 20.36 acres of OS not included. Assumes 90 units built on the school site--worst case scenario.

Construction Phase - Based on project size and type.

Grading - Acres of Grading (Grading Phase): 283.68

Vehicle Trips - Trip gen adjusted per traffic engineer. Trip lengths remain defaults.

Woodstoves -

Energy Use -

Land Use Change -

Sequestration - Assumes approx 1 front yard tree per SFR unit. Commercial site plan shows approx 150 trees within landscaping.

Construction Off-road Equipment Mitigation - Tier 2 Engines

Mobile Land Use Mitigation -

Energy Mitigation -

Water Mitigation -

1.3 User Entered Comments & Non-Default Data

Stockton Tra Vigne - Reduced Project Alternative - 2020 - San Joaquin County, Annual

Project Characteristics - CO2 intensty factor as provided by PG&E:
https://www.pge.com/includes/docs/pdfs/shared/environment/calculator/pge_ghg_emission_factor_info_sheet.pdf

Land Use - Total of 1,031 units [805 LDR and 226 HDR] under this variation." Proposed GP land uses (7.9 HDR, 167 ac LDR., 14.7 School). Existing 15.57 I and 20.36 acres of OS not included. Assumes 90 units built on the school site--worst case scenario.

Construction Phase - Based on project size and type.

Grading - Acres of Grading (Grading Phase): 200.15

Vehicle Trips - Trip gen adjusted per traffic engineer. Trip lengths remain defaults.

Woodstoves -

Energy Use -

Land Use Change -

Sequestration - Assumes approx 1 front yard tree per SFR unit. Commercial site plan shows approx 150 trees within landscaping.

Construction Off-road Equipment Mitigation - Tier 2 Engines

Mobile Land Use Mitigation -

Energy Mitigation -

Water Mitigation -

Trips and VMT -

Stockton Tra Vigne - With Bridge Alternative - 2020 - San Joaquin County, Annual

Project Characteristics - CO2 intensty factor as provided by PG&E:
https://www.pge.com/includes/docs/pdfs/shared/environment/calculator/pge_ghg_emission_factor_info_sheet.pdf

Land Use - Proposed GP land uses (10.5 C, 11.7 HDR, 260.69 ac LDR (minus 14.7 ac school). Pop 3.17/unit. Existing 15.57 I and 20.36 acres of OS not included. Assumes 90 units built on the school site--worst case scenario.

Construction Phase - Based on project size and type.

Grading - Acres of Grading (Grading Phase): 283.68

Vehicle Trips - Trip gen adjusted per traffic engineer. Trip lengths remain defaults.

Woodstoves -

Energy Use -

Land Use Change -

Sequestration - Assumes approx 1 front yard tree per SFR unit. Commercial site plan shows approx 150 trees within landscaping.

Construction Off-road Equipment Mitigation - Tier 2 Engines

Mobile Land Use Mitigation -

Energy Mitigation -

Water Mitigation -

Trips and VMT -

Off-road Mobile (Construction) Energy Usage

Note: For the sake of simplicity, and as a conservative estimation, it was assumed that all off-road vehicles use diesel fuel as an energy source.
Off-road mobile vehicle on-site gallons of fuel (for the site preparation and grading phases) are calculated below.

Given Factor:	**539.72**	**metric tons**	**CO2 (provided in CalEEMod Output File)**	
Conversion Factor:	2204.62	pounds	per metric ton	
Intermediate Result:	**1,189,869**	**pounds**	**CO2**	
Conversion Factor:	22.38	pounds	CO2 per 1 gallon of diesel fuel	(Source: U.S. EIA, 2016.
Final Result:	**53,166.62**	**gallons**	**diesel fuel**	Website: http://www.eia.gov/tools/faqs/faq.cfm?id=307&t=11)

On-road Mobile (Operational) Energy Usage

Note: For the sake of simplicity, it was assumed that passenger vehicles, light duty trucks, motorcycles, and mobile homes use gasoline, and all medium-duty trucks, heavy-duty trucks, and buses use diesel fuel.

Unmitigated:

Step 1: **Total Net Daily Trips (conservatively estimated)**

17,820

Res H-W	*Res H-S*	*Res H-O*
Trip Length (miles) (conservatively estimated) (provided by CalEEMod)		
10.8	7.3	7.3
Trip % (conservatively estimated) (provided by CalEEMod)		
48.40%	13.90%	37.70%

Average Trip Length (weighted average)

8.9940

Therefore:

Average Daily VMT:

160,273

Step 2: Given:

Fleet Mix (provided by CalEEMod v2016.3.1)

LDA	LDT1	LDT2	MDV	LHD1	LHD2	MHD	HHD	OBUS	UBUS	MCY	SBUS	MH
54.7%	3.7%	18.1%	12.9%	2.1%	0.5%	1.6%	5.5%	0.1%	0.2%	0.5%	0.1%	0.1%

And:

Gasoline MPG Factors for each Vehicle Class (from EMFAC2014) - Year 2020

LDA	LDT1	LDT2	MDV	MCY	MH	OBUS
28.92378183	24.050283	21.424564	15.54925437	36.70748289	6.541969217	6.5329227

Diesel MPG Factors for each Vehicle Class (from EMFAC2014) - Year 2020

LHD1	LHD2	MHD	HHD	UBUS	SBUS
17.22844514	15.615312	8.2327192	5.531005519	4.638266257	7.215559485

Therefore:

Weighted Average MPG Factors

Gasoline: **25.3** Diesel: **8.9**

Step 3: **Therefore:**

5,707 daily gallons of gasoline **1,786 daily gallons of diesel**

or

2,082,903 annual gallons of gasoline	**651,792 annual gallons of diesel**

On-road Mobile (Construction) Energy Usage - Site Preparation

Step 1: **Total Daily Worker Trips (provided by CalEEMod)**

18

Worker Trip Length (miles) (provided by CalEEMod)

10.8

Therefore:

Average Worker Daily VMT:

194

Step 2: Given:

Assumed Fleet Mix for Workers (provided by CalEEMod v2016.3.1)

LDA	LDT1	LDT2
0.3333333	0.3333333	0.3333333

And:

Gasoline MPG Factors for each Vehicle Class (from EMFAC2014) - Year 2020

LDA	LDT1	LDT2
28.923782	24.050283	21.424564

Therefore:

Weighted Average Worker MPG Factor

24.8

Step 3: **Therefore:**

7.8 Worker daily gallons of gasoline

Step 4: 20 **# of Days (see CalEEMod)**

Therefore:

Result: **157 Total gallons of gasoline**

On-road Mobile (Construction) Energy Usage - Grading

Step 1: **Total Daily Worker Trips (provided by CalEEMod)**

20

Worker Trip Length (miles) (provided by CalEEMod)

10.8

Therefore:

Average Worker Daily VMT:

216

Step 2: Given:

Assumed Fleet Mix for Workers (provided by CalEEMod v2016.3.1)

LDA	LDT1	LDT2
0.3333333	0.3333333	0.3333333

And:

Gasoline MPG Factors for each Vehicle Class (from EMFAC2014) - Year 2020

LDA	LDT1	LDT2
28.923782	24.050283	21.424564

Therefore:

Weighted Average Worker MPG Factor

24.8

Step 3: **Therefore:**

8.7 Worker daily gallons of gasoline

Step 4: 180 **# of Days (see CalEEMod)**

Therefore:

Result: **1,568 Total gallons of gasoline**

On-road Mobile (Construction) Energy Usage - Building Construction

Step 1:

Total Daily Worker Trips (provided by CalEEMod)	Total Daily Vendor Trips (provided by CalEEMod)	Total Daily Hauler Trips (provided by CalEEMod)
722	188	0

Worker Trip Length (miles) (provided by CalEEMod)	Vendor Trip Length (miles) (provided by CalEEMod)	Hauling Trip Length (miles) (provided by CalEEMod)
10.8	7.3	0

Therefore:

Average Worker Daily VMT:	Average Vendor Daily VMT:	Average Hauling Daily VMT:
7,797.60	1,372	-

Step 2:

Given:

Assumed Fleet Mix for Workers (provided by CalEEMod v2016.3.1)

EXECUTIVE SUMMARY

This Greenhouse Gas Reduction Plan and Analysis (GGRPA) addresses the potential contributions of the proposed Bear Creek East Specific Plan (BCESP) to climate change. This GGRPA assumes the general consensus of the scientific community, which is that global climate change is occurring, and that greenhouse gas (GHG) emissions generated by human activities are a major source of climate change. Climate change has become an issue of significant concern in California, which has spurred legislation and executive orders to deal with this issue, and environmental impact review of projects must now include climate change impacts. In the City of Stockton, state legislation and a Settlement Agreement with the California Attorney General and the Sierra Club has prompted local actions to reduce GHG emissions, including the current process of preparing a Climate Action Plan and the establishment of an interim GHG reduction target for the City. The latter measure, in particular, applies to the evaluation of potential impacts of development projects on GHG emissions and climate change.

The BCESP provides development and design guidelines for 317.3 acres of unincorporated land located just north of the City of Stockton. The Specific Plan anticipates a mixed-use master planned community consisting of commercial and light industrial uses, offices, parks and open space, and an elementary school intermixed with up to 2,122 residential housing units, including up to 304 high-density multi-family units. The proposed development, along with the associated traffic it would generate, will generate greenhouse gases. As a result of this creation of GHG emissions, the BCESP applicant has taken a pro-active approach by incorporating design features and additional measures in the BCESP that would reduce GHG emissions.

The GGRPA analyzes these design features and measures in the BCESP to determine if they would reduce GHG emissions to a level that would satisfy established significance thresholds. For the BCESP project, the applicable significance threshold is the City of Stockton's interim GHG reduction target of 28.7% from "business as usual" GHG emissions - emissions that would occur without GHG reduction legislation or the implementation of other applicable regulations. The interim reduction target is based on the State's emission reduction objective. Since those State measures would account for most of the planned emission reductions, the City has determined that local actions would be responsible for only a 6.6% GHG emission reduction. Accordingly, a reduction in GHG emissions of 6.6% from business-as-usual emissions is the target for the BCESP.

The GGRPA assesses the GHG reduction value of the design features and reduction measures in the BCESP. This is accomplished using two existing systems for quantifying GHG reduction measures – the San Joaquin Valley Air Pollution Control District (APCD) and the California Air Pollution Control Officers Association (CAPCOA). Each system has identified measures that mitigate GHG emissions and has assigned values to each measure, based on percentage reduction in emissions. The BCESP design features and reduction measures were compared to the measures in both systems, and quantified reduction values were assigned to the BCESP features and measures. Some design features and measures

did not have quantified reduction values assigned to them by either system; however, these measures were also listed as they were considered to have some impact on GHG emission reduction.

The quantified reduction features and measures were summed, and then the totals were weighted based on emission source and the source's contribution to the City of Stockton's GHG emissions. Based on the quantified values and the applied weighting, it was determined that the design features and reduction measures in the BCESP would reduce emissions from business as usual levels by 9.639% under the APCD quantification system, and by 12.581% under the CAPCOA quantification system. Both percentages exceed the 6.6% local share of the City's interim GHG reduction target. Based on these methodologies, the project would have a less than significant impact on climate change from a CEQA perspective, and would be consistent with the GHG reduction objectives of the applicable state and local plans and regulations.

The GGRPA also provides a detailed analysis of the consistency of the BCESP with the applicable GHG reduction plans: the State's Climate Change Scoping Plan, the City's future Climate Action Plan, and the Early Climate Protection Actions of the Settlement Agreement. A complete consistency analysis with the City's Climate Action Plan has not been prepared, however, because the City has not adopted such a plan to date. Consequently, a basis for analysis of consistency with some of the Early Climate Protection Actions is currently not available. Nevertheless, based on available information, the BCESP project is consistent with these plans. Moreover, the BCESP would include provisions requiring consistency with any future GHG reduction plans and regulations that are adopted.

1.0 INTRODUCTION

Climate change has become an issue of significant concern internationally, and in California. The potential impacts of climate change on the state's environment and economy have spurred legislation and executive orders to deal with this issue. Local governments are addressing climate change in their plant operations, transportation planning, land use planning and other governmental processes. The City of Stockton has implemented programs related to climate change impacts, and it is currently preparing a Climate Action Plan (CAP) that will set forth policies and programs to reduce greenhouse gas (GHG) emissions resulting from various activities in the City, including new land development.

The proposed Bear Creek East Specific Plan (BCESP) provides development and design guidelines for 317.3 acres of unincorporated land located just north of the City of Stockton. The Specific Plan anticipates a mixed-use master planned community consisting of commercial and light industrial uses, offices, parks and open space, and an elementary school intermixed with up to 2,112 residential housing units, including up to 304 high-density multi-family units. The proposed development, along with the associated traffic it would generate, will produce greenhouse gases. The BCESP applicants have taken a pro-active approach by incorporating design features in the BCESP that reduce GHG emissions. In addition, the BCESP applicant has authorized the preparation of this Greenhouse Gas Reduction Plan and Analysis (GGRPA) to provide background information and supporting data for GHG reduction features and measures in the BCESP.

The primary purpose of the GHG reduction measures in the BCESP is to reduce the amount of greenhouse gas emissions associated with the project so that it will comply with or exceed the applicable greenhouse gas reduction standards. The purposes of the GGRPA are to estimate the potential greenhouse gas emissions associated with the project; describe the applicable GHG reduction standards and metrics in place or under development; and identify and quantify the GHG reduction measures in the BCESP to determine if it will meet or exceed, or at least provide for project consistency with, the applicable standards.

The GGRPA is organized as follows:

- Chapter 1 introduces the GGRPA, presenting its intended purposes and its organization.

- Chapter 2 provides the scientific and regulatory background for the GGRPA. This chapter includes a discussion of applicable international standards, State legislation and policy, and City of Stockton plans and actions related to GHG reduction.

- Chapter 3 presents the GHG reduction metrics and standards that are relevant to the City's consideration of the BCESP, based on applicable State and local plans and using metrics developed by agencies involved with GHG emissions. Regarding

the project, the relevant metric is the local share of the City of Stockton's interim target of a 28.7% reduction of GHG emissions from "business-as-usual" conditions.

- Chapter 4 describes the BCESP and its GHG reduction features, both inherently in the site plan and in the measures contained in the GGRPA. The greenhouse gas reduction potential of the BCESP is compared to the relevant standards, using available quantitative and non-quantitative systems. This chapter also discusses the process by which the GHG reduction measures were incorporated in the BCESP.

- Chapter 5 summarizes the GHG reduction measures in the BCESP and makes a conclusion on the BCESP's compliance with the applicable GHG reduction standard, with recommendations as appropriate. It also discusses the relationship between the GGRPA and future GHG reduction measures proposed by other GHG plans, such as the State's Scoping Plan and Stockton's CAP.

2.0 BACKGROUND

This chapter describes the scientific and regulatory framework for climate change issues in California. This includes a discussion of the general international understanding with respect to climate change as well as State legislation, policy and action plans addressing climate change and greenhouse gas reduction in California. It also describes the plans and programs of the City of Stockton, including the Settlement Agreement with the California Attorney General's office that provided much of the impetus for City actions on climate change.

2.1 SCIENTIFIC BACKGROUND

This GGR Plan and Analysis assumes the general consensus of the scientific community, which is that global climate change is occurring, as indicated by increases in global air and ocean temperatures (AEP, 2007). A major source of global climate change is understood to be atmospheric concentrations of greenhouse gases (GHGs) that trap heat in the earth's atmosphere, thereby increasing average global temperatures. GHGs include carbon dioxide (CO2), the most common GHG and the largest contributor to global climate change. Other GHGs include methane (CH4), nitrous oxide (N2O) and other less-abundant gases. GHGs have varied global warming potential (GWP) - the potential of a gas or aerosol to trap heat in the atmosphere. The reference gas for GWP is carbon dioxide, which has an assumed GWP of one. Methane has a GWP of 21, which means that it has 21 times greater global warming effect than carbon dioxide on a molecule-by-molecule basis. GWPs for other GHGs include 310 for N2O and 23,900 for sulfur hexafluoride, a gas used in the electrical and magnesium industries (California Climate Action Registry, 2009).

Total worldwide emissions of GHGs in 2004 were estimated at 20,135 million metric tons (MMT) of CO2 equivalent (CO2e). U.S. emissions during the same year were estimated at 7,074 MMT CO2e (AEP, 2007). In 2004, GHG emissions in California totaled 492 MMT CO2e (California Energy Commission, 2006). California was the second largest contributor of GHGs among states in the United States after Texas, and the 16th largest contributor in the world (AEP, 2007; California Energy Commission, 2006)).

GHG emissions are associated with numerous human activities, primarily those that involve the combustion of carbon-based fuels such as vehicle use and power generation. In California, the major source of greenhouse gases was transportation, accounting for 40.7% of total GHG emissions. Electric power generation accounted for the second highest percentage of emissions, at 22.2%. Industrial activity accounted for 20.5% of total emissions, agriculture and forestry comprised 8.3%, and the remaining 8.3% were from other sources (California Energy Commission, 2006).

The City of Stockton has recently conducted a preliminary inventory of its GHG emissions, consistent with the methodologies of the CARB and of the International Council for Local

Environmental Initiatives (ICLEI) – Local Governments for Sustainability. Table 2-1 provides an estimate of the GHG emissions generated in the City of Stockton for three specific years, along with per capita emissions.

TABLE 2-1
GHG EMISSIONS IN STOCKTON

	GHG Emissions (metric tons)		
Sector	1990	2005	2020
Residential	278,013	353,567	482,808
Commercial/Industrial	400,134	440,970	506,604
Transportation	1,410,391	1,537,764	1,924,981
Waste	49,970	63,296	86,433
TOTAL	**2,138,308**	**2,395,597**	**3,000,886**
Population	210,943	268,470	366,322
Per Capita GHG Emissions	10.14	8.93	8.19

Source: "Adoption of Interim Community Greenhouse Gas Emission Reduction Target for the City of Stockton." City of Stockton memorandum dated September 1, 2009. 1990 City population from 1990 U,S, Census. 2005 City population and 2020 projection from San Joaquin Council of Governments, *Population, Employment and Housing Unit Projections,* 2004; cited in City of Stockton Housing Element, adopted May 18, 2010.

As indicated in Table 2-1, while total GHG emissions in Stockton are expected to increase over time, per capita emissions are projected to decrease. This may be explained in part by anticipated technological changes that will be implemented during this time, such as more energy efficient buildings, cleaner burning engines and use of renewable energy sources such as solar and wind power. Linked with these technological changes are policy changes designed to encourage the use of these technologies, such as the Low Carbon Fuel Standard, the Pavley Act GHG emission standards for automobile, the Renewables Portfolio Standard, and the California Green Building Standards Code (CALGREEN). Along with changes that encourage use of GHG-reducing technology, policy changes that encourage changes in transportation and land use activities will also make contributions. For example, Senate Bill 375 (SB 375) requires metropolitan planning organizations to prepare integrated transportation and land use plans that reduce the amount of vehicle travel, thereby reducing GHG emissions from vehicles.

Concerns related to global climate change include the direct consequences of an altered, warmer climate, but also include indirect effects. In California, both direct and indirect effects could have serious consequences. The state's Climate Action Team, in its 2010 Biennial Report, discussed the latest research on the potential impacts of climate change on California's environment. These potential impacts include (Climate Action Team, 2010):

- Although there would be continued variability, the general trend would be for less precipitation throughout California to the end of the 21st century. This trend does not apply uniformly to all areas of California – in fact, the tendency for drying may

fade and even reverse in northern California. However, even if precipitation levels were unchanged, higher temperatures would increase evaporative water loss, and thus produce overall drier conditions.

- The snowpack in the Sierra Nevada, which is a major source of California's water, would melt earlier. The earlier melting could adversely affect the capacity and reliability of the California water system with respect to water storage and flood management. In addition, the snowpack would produce less overall runoff, and there would be an increasing trend in extreme flows (floods) during the winter months.

- Sea levels would rise from their 2000 levels by 11-18 inches by 2050, and by 23-55 inches by 2100. Many coastal areas would be subject to inundation, as would areas near bodies of water affected by tides, such as Suisun Bay.

- Agricultural production would vary by crop, but some crops (e.g., cherries, cotton, maize, wheat, sunflower) would experience a significant decrease in yields. Other crops (e.g., almonds, tomatoes, rice, alfalfa) would experience no change in yields or even an increase.

- The number and intensity of wildfires is expected to increase, which would increase risk to lives and property and contribute to decreased air quality.

- The productivity of forest for timber in general is estimated to decline on a statewide basis, but timber production may increase in some locations and for some tree species.

- While water deliveries to urban users would generally be maintained, water for agricultural uses and environmental flows may be reduced. Water exports from the Delta south would be reduced by 21-25% by 2100. Reservoir carryover storage (the amount of water in reservoirs at the end of the dry season) would decline by 33-38% by 2100. In response, groundwater pumping in the Sacramento Valley would increase.

- Increases in mean temperature and increased frequency of extreme heat events such as heat waves would occur, which would negatively affect public health.

- The aforementioned increases in temperature, combined with the uneven distribution of new residential development across the state, will generate increased electricity demand for cooling, particularly in the Central Valley. However, hydroelectric power generation is expected to decline due to changes in hydrology caused by climate change.

- Air pollution in coming decades is expected to worsen, with an increased potential for high ozone and high particulate matter (PM) days. This would adversely affect public health.

Many of the impacts described above would affect the Stockton area, directly or indirectly. Specifically, climate change may have the following impacts on Stockton, and by extension the Bear Creek East Specific Plan area:

- The general trend would be for less precipitation throughout California. Even if precipitation levels were unchanged, higher temperatures would produce overall drier conditions. This would have a two-fold effect on Stockton. First, less precipitation would mean less replenishment of groundwater and reservoirs upon which the project would rely for its water supply. Second, drier conditions may lead to increased water demand for landscaping, placing greater demands on water supply.

- The snowpack in the Sierra Nevada would melt earlier, thereby producing less overall runoff and increasing a trend in floods during the winter months. Reduced snowpack runoff, which is a major source of California's water, would reduce the available water supply of both surface and groundwater to Stockton. Stockton is located in an area prone to flooding; therefore, increased flood events could affect the safety of Stockton residents and property.

- Sea level rise would not directly affect Stockton, as it is not located on a coastline or adjacent to any body of water affected by tides. However, increased sea levels could lead to greater saltwater intrusion into the Delta, which experiences tidal effects. Greater saltwater intrusion may adversely affect water quality of aquifers in the Delta area, thereby affecting potential groundwater supplies for the Stockton area.

- Changes in agricultural production would have a significant economic impact, as agriculture is a significant sector in the local economy.

- Stockton is not within an area that would be directly affected by wildfires, whose number and intensity are expected to increase. However, increased wildfires elsewhere in the state, particularly in the foothill and mountain regions east and west of Stockton, may contribute to decreased air quality in the area, which would adversely affect the health of residents.

- Water deliveries to urban users would generally be maintained. However, a decline in reservoir carryover storage may lead to increased groundwater pumping, thereby reducing aquifer volumes and contributing to existing subsidence conditions in San Joaquin County. In addition, as previously described, groundwater quality in the Stockton area may be adversely affected by saltwater intrusion, further reducing available groundwater supplies.

- Increases in mean temperature and increased frequency of extreme heat events would occur, which would negatively affect public health. Stockton is located in the San Joaquin Valley, which tends to experience hot summers. More frequent hot days would likely adversely affect the health of Stockton residents.

- Increased electricity demand for cooling is expected in Stockton as temperatures rise, which would help residents deal with potential heat impacts. However, an expected decline in hydroelectric power generation may lead to a reduced electricity supply, thereby increasing the potential for brownouts and blackouts if alternative sources of electric power are not found. Non-functioning cooling systems resulting from brownouts and blackouts would likely lead to increased incidents of heat-related health problems in the Stockton area.

- Air pollution in coming decades is expected to worsen, with an increased potential for high ozone and high PM days. Stockton is located in an air basin that is already in nonattainment status for state and federal ozone standards and state PM standards. The increased air pollution would adversely affect the health of residents and workers in the Stockton area.

GHGs have been accumulating in the earth's atmosphere at a faster rate than has occurred historically. The 2005 GHG concentration in the atmosphere was estimated at 375 parts per million (ppm). The United Nations Intergovernmental Panel on Climate Change (IPCC) has constructed several emission trajectories of greenhouse gas concentrations needed to stabilize global temperatures and climate change impacts. The IPCC concluded that stabilization of greenhouse gases at a concentration of 400-450 parts per million (ppm) is required to keep mean global warming below 2° Celsius, which is assumed to be necessary to avoid dangerous climate change (AEP, 2007).

The IPCC climate model results form the basis of the California global climate change statutes and policy embodied in AB 32 and Executive Order S-3-05 as well as similar policies adopted by other government entities. In general, these policies have in common the goal of reducing greenhouse gas emissions to 1990 levels by 2020.

2.2 REGULATORY BACKGROUND

2.2.1 International

Global climate change is a subject of longstanding international dialogue and action, dating from the 1988 establishment of the IPCC to further the understanding of human-induced climate change, its potential impacts, and options for adaptation and mitigation (IPCC, 2004). The United States joined other countries around the world in the United Nations Framework Convention on Climate Change (UNFCCC), which established an agreement to gather and share related information and take action to address the impacts of climate change (UNFCCC, 2007). The Kyoto Protocol, a treaty negotiated under UNFCCC, committed the participants to reduce emissions of GHGs or engage in emissions trading. However, the United States did not ratify the treaty.

In 2009, the UNFCCC held its annual Climate Change Conference in Copenhagen, Denmark. At the conference, member states agreed to make voluntary pledges for GHG emission reductions to be achieved by 2020. If the pledges are considered insufficient to meet the goal of global temperature rise to no more than 2° Celsius, then the accord would be reviewed no later than 2015 (UNFCCC, 2009). At the recently concluded 2010

conference in Cancun, Mexico, members agreed to inscribe their pledges into conference documents, as well as agreeing to strengthen reporting requirements and review of emissions-reduction actions by both developed and developing countries (Associated Press, 2010).

2.2.2 Federal

To date, the federal government has not adopted any comprehensive national strategy for reducing GHG emissions. The last such attempt was made in 1993, when President Clinton announced a Climate Change Action Plan with a goal of reducing GHG emissions to 1990 levels by 2000 (CAPCOA, 2008).

Under the current administration, efforts have been made to institute new federal fuel economy and GHG emissions standards modeled after existing California standards; in a related action, in 2009, the U.S. Environmental Protection Agency (EPA) granted California the authority to implement GHG-reducing auto standards. Also, in May 2010, the EPA issued a final rule setting thresholds for GHG emissions that define when permits under the New Source Review Prevention of Significant Deterioration (PSD) and Title V Operating Permit programs are required for new and existing industrial facilities. This final rule "tailors" the requirements of these permitting programs to limit which facilities will be required to obtain PSD and Title V permits. Facilities responsible for nearly 70% of the national GHG emissions from stationary sources will be subject to permitting requirements under this rule. This includes the largest GHG emitters – power plants, refineries and cement production facilities. This rule does not apply to the project, as no significant stationary sources of GHG emissions are proposed.

2.2.3 State of California

The Governor of California and the State Legislature have declared their concern with regard to global climate change, and have set State agencies in motion to identify and implement strategies for the reduction of GHG emissions. California first addressed climate change in 1988 with the passage of Assembly Bill (AB) 4420, which directed the California Energy Commission to study global warming impacts to the state and to develop an inventory of GHG emission sources. In 2000, Senate Bill (SB) 1771 established the California Climate Action Registry to allow companies, cities and governmental agencies to voluntarily record their GHG emissions in anticipation of a possible program allowing them to be credited for early reductions (CARB, 2008).

Executive Order S-3-05

In 2005, Governor Schwarzenegger signed Executive Order S-3-05, which called for the state to reduce its GHG emissions to 1990 levels by 2020, and to 80% below 1990 levels by 2050. The 2050 target represents the level of emission reductions climate scientists believe is necessary to reach levels that will stabilize the climate (CARB, 2008). The Executive Order also created the Climate Action Team, composed of the directors of several State agencies. Chaired by the Secretary of the California Environmental Protection Agency, the Climate Action Team has helped to direct State efforts on GHG reduction and to engage key State agencies in the process (CARB, 2008). The majority of this work has

occurred in the process of implementing AB 32, the Global Warming Solutions Act of 2006.

AB 32

In 2006, the State Legislature passed and Governor Schwarzenegger signed AB 32, the Global Warming Solutions Act. AB 32 identified global climate change as a "serious threat to the economic well-being, public health, natural resources and the environment of California." It set into law the 2020 GHG reduction goal identified in Executive Order S-3-05; although AB 32 did not include the EO S-3-05 goal of reducing greenhouse gas emissions to 80% below 1990 levels by 2050, the establishment of the 2020 goal was intended to establish a trajectory for further reductions in greenhouse gas emissions over time.

AB 32 directed the California Air Resources Board (CARB) to begin developing discrete early actions to reduce GHG emissions, while also preparing a Scoping Plan to identify actions that would meet the 2020 reduction target. The Scoping Plan was adopted in 2008, and the reduction measures to meet the 2020 target are scheduled to become operative in 2012 (CARB, 2008).

AB 32 required the CARB to identify the statewide baseline level of GHG emissions in 1990, which would also serve as the emissions target to be achieved by 2020. In December 2007, CARB identified that emission target at 427 MMT CO2E. CARB also identified nine discrete early action measures that should be implemented immediately: Low Carbon Fuel Standard, Landfill Methane Control, Reductions from Mobile Air Conditioning, Semiconductor Reduction, SF_6 Reductions from Non-Electric and Non-Semiconductor Applications, High GWP Consumer Products, Heavy-Duty Vehicles, Tire Pressure Program, and Shore Power for Ocean-Going Vessels. Six of these measures are currently in effect or will be shortly, while regulations are still being prepared for the other three measures (SF_6 Reductions, High GWP Consumer Products, Tire Pressure Program).

Climate Change Scoping Plan

In accordance with AB 32, CARB adopted the Climate Change Scoping Plan in December 2008. The Scoping Plan details the GHG reduction activities that will be undertaken by the state or alternatively passed down to local government; the Scoping Plan quantifies the estimated GHG emission reductions associated with each of the initiatives. Self-described as "ambitious but achievable", the Scoping Plan proposes a 29% reduction in projected "business-as-usual" emission levels for 2020, which the Scoping Plan assumes will achieve the goal of reducing GHG emissions to 1990 levels, or 427 MMTCO2e. Key elements in the Scoping Plan for achieving that goal include:

- Expanding and strengthening existing energy efficiency programs, as well as building and appliance standards.
- Achieving a statewide renewable energy mix of 33 percent.
- Developing a California cap-and-trade program that links with other Western Climate Initiative partner programs to create a regional market system.

- Establishing targets for transportation-related GHG emissions for regions throughout California, and pursuing policies and incentives to achieve those targets.

- Adopting and implementing measures pursuant to existing State laws and policies, including California's clean car standards, goods movement measures, and the Low Carbon Fuel Standard.

- Creating targeted fees, including a public goods charge on water use, fees on higher global warming potential gases, and a fee to fund the administrative costs of the State's long-term commitment to AB 32 implementation.

The Scoping Plan's Recommended Reduction Measures, 16 in all, are projected to result in a total GHG emission reduction of 174 MMT CO2e by 2020, which exceeds the target reduction by 5 MMT CO2e. Of these reductions, nearly 85% will be achieved under the proposed regional cap-and-trade system and "complementary measures." Several other measures, including reduction in state and local government operations, are identified and would contribute additional GHG reductions. The potential contribution of local government-related reductions is not quantified in the Scoping Plan or counted in the projected reductions. Table 3-1 in Chapter 3.0 provides a summary of the Recommended Reduction Measures.

AB 32 Discrete Early Actions

In accordance with the provisions of AB 32, CARB identified and adopted nine "discrete early actions" to reduce GHG emissions, designed to go into effect on or before January 1, 2010. The nine discrete early actions are:

- Low carbon fuel standard
- Aerodynamic efficiency standards for trucks
- Tire pressure program
- Ship electrification at ports
- Increase capture of methane from landfills
- Reduce high global warming potential (GWP) refrigerants
- Limit high GWP gases in consumer products
- Reduce perfluorocarbons (PFCs) in semiconductor applications
- Reduce sulfur hexafluoride emissions in non-electric and non-semiconductor applications.

Executive Order S-01-07, issued in January 2007, established a statewide goal to reduce the carbon intensity of California's transportation fuels by at least 10% by 2020. To achieve this goal, the Executive Order directed CARB to establish a Low Carbon Fuel Standard, which would require fuel providers in California to ensure that the mix of fuel they sell into the California market meet, on average, a declining standard for GHG emissions (measured in CO2e grams) per unit of fuel energy sold. CARB approved the Low Carbon Fuel Standard regulation in April 2009, and the first substantive requirements of the standard are scheduled for implementation in 2011. All other early actions have been adopted and are in varying stages of implementation.

SB 375

Of the various Recommended Reduction Measures in the Climate Change Scoping Plan, one – Regional Transportation-Related GHG Targets – is addressed to local land development. This measure revolves around the implementation of SB 375. SB 375, passed in 2008, builds on the existing regional transportation planning process to connect GHG emission reductions to land use and transportation policy. Specifically, SB 375 requires CARB to establish GHG emission reduction targets for each region, defined as an area covered by a metropolitan planning organization (MPO). CARB must set regional targets by September 30, 2010. In San Joaquin County, the MPO is the San Joaquin Council of Governments (SJCOG).

Under SB 375, each MPO must include a Sustainable Communities Strategy in its regional transportation plan that seeks to achieve targeted reductions in GHG emissions from cars and light trucks if there is a feasible way to do so. If the MPO determines that a Sustainable Communities Strategy does not achieve the region's targets, then the MPO must develop an Alternative Planning Strategy. The Alternative Planning Strategy would have the same objective as the Sustainable Communities Strategy, but it would not be part of the regional transportation plan.

Neither the Sustainable Communities Strategy nor the Alternative Planning Strategy directly affects or supersedes local land use decisions; nor do they require that local plans or zoning be consistent with them. However, SB 375 provides an incentive by streamlining the CEQA environmental review process under specific circumstances. A residential or mixed-use project that is consistent with the general use designation, density, building intensity and applicable policies for the project area in either a Sustainable Communities Strategy or an Alternative Planning Strategy does not have to address particular issues in a CEQA document. Specifically, the CEQA document would not be required to discuss:

- Growth-inducing impacts; or

- Project-specific or cumulative impacts on global warming from vehicle trips, if the project incorporates mitigation measures required by an applicable environmental document.

The BCESP site is within the jurisdiction of the San Joaquin Council of Governments (SJCOG), the MPO for the San Joaquin County region. CARB adopted regional targets on September 23, 2010. The targets established for SJCOG are a 5% per capita reduction in GHG emissions by 2020, and a 10% reduction by 2035. These targets are “placeholder” targets, and CARB intends to revisit them in 2012. Nevertheless, SJCOG will begin work on its Sustainable Communities Strategy.

California Green Building Code (CALGREEN)

“Green building” covers building design and construction practices that reduce consumption of natural resources and lower the impact on the environment. Typical practices encourage energy and water efficiency, reduction in waste, and increased use of recycled materials. In recent years, several organizations have developed certification

programs that evaluate the "greenness" of a development project. The best known of such programs is the Leadership in Energy and Environmental Design (LEED) program, developed by the U.S. Green Building Council. Another certification program is Build It Green, prepared by a California non-profit organization of the same name.

In 2009, the California Building Standards Commission adopted a voluntary Green Building Standards Code, known as CALGREEN. On January 2010, the Commission made CALGREEN mandatory, to be effective January 1, 2011. CALGREEN is Part 11 of Title 24 of the California Code of Regulations. CALGREEN will require that every new building constructed in California reduce water consumption by 20%, divert 50% of construction waste from landfills, and install low pollutant-emitting materials. It also requires separate water meters for indoor and outdoor water use of nonresidential buildings, with a requirement for moisture-sensing irrigation systems for larger landscape projects. CALGREEN requires mandatory inspections of energy systems (e.g., heat furnace, air conditioner and mechanical equipment) for nonresidential buildings over 10,000 square feet to ensure that such systems are working at their maximum capacity and according to their design efficiencies. Upon passing state inspections, property owners will have the ability to label their facilities as CALGREEN compliant without using additional third-party certification programs such as LEED.

Although CALGREEN was developed independently of the State's GHG reduction programs, it would have an impact on GHG emissions. The CARB estimated that CALGREEN provisions would reduce GHG emissions by 3.0 MMT CO2e in 2020 (Office of the Governor, 2010). CALGREEN would partially achieve the 26 MMT CO2e reduction through green building practices anticipated by the State's Climate Change Scoping Plan (see Table 3-1 in Chapter 3.0). In August 2010, the City of Stockton adopted CALGREEN as part of its Green Building Ordinance, as described later in this section.

SB 97

Senate Bill 97 (SB 97), enacted in 2007, directed the Governor's Office of Planning and Research (OPR) to recommended amendments to the CEQA Guidelines for the mitigation of greenhouse gas emissions or the effects of greenhouse gas emissions. In April 2009, OPR submitted to the Secretary for Natural Resources its recommended amendments to the CEQA Guidelines, which were adopted and took effect on March 18, 2010. Among the CEQA Guidelines amendments were changes to the Environmental Checklist (CEQA Guidelines Appendix G) that created a Greenhouse Gas Emissions section with generalized significance thresholds to aid in the evaluation of GHG emission impacts. With these amendments, lead agencies must now evaluate impacts related to climate change as part of their CEQA environmental review of projects.

California Attorney General's Recommendations

The California Attorney General's Office has issued guidance for local governments on dealing with climate change in their local plans. The Attorney General's recommendations are not binding; however, they do provide local governments and project applicants an indication of what the State of California would consider effective climate change policies and mitigation.

In the paper "Sustainability and General Plans: Examples of Policies to Address Climate Change," resources and examples are cited for General Plan policies that address climate change, among which are smart growth, transit-oriented development, energy- and water-efficient buildings and landscaping, alternate travel mode connections, renewable energy generation, urban and rural forestry, and solid waste management. In another paper, "Addressing Climate Change at the Project Level," mitigation measures to reduce the climate change impacts of projects are listed, along with references. Sample mitigation measures include, among others, energy-efficient appliances and lighting, green building, use of renewable energy sources, use of water-efficient irrigation systems and landscaping, reuse and recycling of construction and other solid waste, mixed use and infill development, incorporation of bicycle and pedestrian facilities, and programs to reduce vehicle travel. The BCESP has incorporated mitigation measures to reduce its GHG emission impacts, consistent with this paper.

Other State Regulations

AB 1493

Assembly Bill 1493 (AB 1493), authored by State Assembly member Fran Pavley and enacted in 2002, requires CARB to develop and adopt the nation's first GHG emission standards for automobiles and light trucks. CARB approved standards for GHG emission reductions, also known as "Pavley I," in September 2004. The standards were scheduled to be phased in gradually from the 2009 to the 2016 vehicle model years. When fully phased in, the near term (2009-2012) standards are estimated to result in about a 22 percent reduction in GHG emissions as compared to the 2002 fleet, and the mid-term (2013-2016) standards would result in about a 30 percent reduction (CARB, 2004).

In 2004, the State of California submitted a request for a waiver from federal clean air regulations to allow the State to require reduced tailpipe emissions of CO_2. After initially denying the waiver request in late 2007, the EPA granted the request in June 2009, enabling the State to enforce its GHG emissions standards for new motor vehicles beginning with the current model year.

Low Carbon Fuel Standard

In January 2007, Governor Schwarzenegger issued Executive Order S-01-07, which established a statewide goal to reduce the carbon intensity of California's transportation fuels by at least 10% by 2020. To achieve this goal, the Executive Order directed CARB to establish a Low Carbon Fuel Standard (LCFS). The LCFS will require fuel providers in California to ensure that the mix of fuel they sell into the California market meet, on average, a declining standard for GHG emissions (measured in CO2e grams) per unit of fuel energy sold. The standard will be measured on a lifecycle basis in order to include all emissions from fuel consumption and production, including the "upstream" emissions (i.e., from the extraction, refining and transportation of fuels) that are major contributors to the climate change impact of transportation fuels. CARB identified the LCFS as a discrete early action item pursuant to AB 32 and approved the LCFS regulation in April 2009. The first substantive requirements of the LCFS are scheduled for implementation in 2011.

Renewables Portfolio Standard

Established originally in 2002 under Senate Bill 1078, California's Renewables Portfolio Standard was accelerated in 2006 under Senate Bill 107 by requiring that 20 percent of electricity retail sales be served by renewable energy resources by 2010. Subsequent recommendations in California energy policy reports advocated a goal of 33 percent by 2020. On November 17, 2008, Governor Arnold Schwarzenegger signed Executive Order S-14-08, requiring all retail sellers of electricity to serve 33 percent of their load with renewable energy by 2020. The following year, Executive Order S-21-09 directed the California Air Resources Board, under its AB 32 authority, to enact regulations to achieve the goal of 33 percent renewables by 2020.

In April 2011, Governor Edmund G. Brown, Jr. signed Senate Bill X1-2. This legislation preempts the CARB's 33 percent Renewable Electricity Standard and applies to all electricity retailers in the state, including publicly owned utilities, investor-owned utilities, electricity service providers, and community choice aggregators. All of these entities must adopt the new Renewables Portfolio Standard goals of 20 percent of retail sales from renewables by the end of 2013, 25 percent by the end of 2016, and 33 percent by the end of 2020.

2.2.4 City of Stockton

Stockton General Plan 2035

The Stockton Planning Commission and the Community Development Department manage land development within the City. The basic document governing land development is the Stockton General Plan 2035. The General Plan and City staff encourages the planning and development of "smart growth" communities and promotion of infill development where feasible. Green building is required by the existing adopted City Council policy discussed above. Larger development projects are required to comply with the Early Climate Action Protection requirements of the City's Settlement Agreement with the California Attorney General and the Sierra Club, which is discussed in more detail below.

The City of Stockton addressed the issue of global climate change and the need to reduce GHGs resulting from new land development in Policy HS-4.20 of the General Plan 2035, which was adopted in December 2007. Policy HS-4.20 requires the City to develop and adopt a more detailed policy that would be focused on GHG reductions that can be achieved through the land use planning process. This policy is being implemented by the City in the preparation of its Climate Action Plan (CAP), as discussed in more detail below.

The City of Stockton is engaged in a range of programs and studies that will, when implemented, result in reductions in GHG emissions associated with municipal operations, new development, and existing development in the larger community. The City of Stockton supports efforts to control GHG emissions through its membership in ICLEI – Local Governments for Sustainability. In partnership with ICLEI, the City has conducted a preliminary emissions inventory and forecast of greenhouse gas emissions, which would be followed by adoption of a local CAP.

Settlement Agreement with Attorney General

In December 2007, the City adopted the Stockton General Plan 2035 and certified its Environmental Impact Report (EIR). The following month, the Mother Lode Chapter of the Sierra Club and the Morada Area Association filed court actions alleging that the City had violated CEQA in its approval of the General Plan. The California Attorney General's Office also raised concerns about the adequacy of the EIR, including the EIR's failure to incorporate enforceable measures to mitigate the GHG emissions resulting from General Plan implementation. In order to allow the General Plan to go forward, the City, the Sierra Club and the Attorney General resolved their dispute through a Settlement Agreement, which was signed by all parties in October 2008. The Morada group was not a party to the Agreement.

As stated in the Settlement Agreement, all parties "want to ensure that the General Plan and the City's implementing actions address GHG reduction in a meaningful and constructive manner." A provision of the Agreement requires the City to prepare a Climate Action Plan, which is discussed below. The City also agreed to submit a green building program and a transit program based on a transit gap study to the City Council for its consideration. The Settlement Agreement promotes incentives for infill and downtown development, while imposing criteria on development at the edge of the City limits intended to mitigate GHG emissions.

Section 9 of the Settlement Agreement describes Early Climate Protection Actions, which are requirements that are applicable to specific plans and large development projects until the City adopts the CAP. Section 9(a) requires that the City consider several GHG-related planning issues, which are described in more detail in Chapter 3.0 of this document. Section 9(b), (c) and (d) require the City to review the studies, to consider imposing requirements on projects highlighted by the studies via mitigation measures and/or conditions of approval, to conduct a public hearing, and to consider requiring certain projects to conform to future requirements of the CAP and its implementing documents.

City of Stockton Climate Action Plan

In accordance with the Settlement Agreement, the City of Stockton is currently developing a CAP. A Climate Action Plan Advisory Committee (CAPAC), consisting of representatives from environmental, non-profit, labor, business, and developer interests, is responsible for preparing the CAP. In brief, the CAP is required to inventory existing, 1990 and 2020 GHG emissions and identify GHG reduction targets consistent with AB 32. It is anticipated that the CAP will address reduction of *per capita* vehicle miles travelled (VMT), green building requirements, energy efficiency of existing structures, transit gaps, transit improvement programs, balancing development on the urban fringe with infill development, and monitoring progress in the implementation of the Plan.
While the Settlement Agreement required that the CAP be submitted to the City Council within two years of the execution of the Settlement Agreement, that deadline has now passed. It is anticipated that the CAP will be submitted for approval in 2011.

Some CAP requirements are already being implemented on an interim basis as a result of other actions by the City of Stockton. These include the green building program previously

discussed, and the City's efforts to promote smart growth in conjunction with its review and approval of new land development projects. In September 2009, the City Council adopted an interim greenhouse gas reduction target of 28.7% from estimated 2020 emission levels. Based on the available data, this is the reduction needed to achieve a citywide reduction of GHG emissions to 1990 levels by 2020. The interim target is consistent with the state's Scoping Plan objective of reducing projected 2020 GHG emissions by 29% in order to reach the target of reaching 1990 GHG emission levels.

The Settlement Agreement contemplated that the City would adopt a transit program, based upon a transit gap study to be prepared as part of the CAP process. The program would require, among other things, certain street design standards to facilitate transit and the imposition of fees to contribute toward the development of a city-wide transit system. The City has not adopted such a program, but has released a transit gap study, prepared by Transportation Management and Design, Inc.

The study concluded that geographic coverage of the San Joaquin Regional Transit District (SJRTD) service area is adequate to serve the demand. However, it noted that General Plan policies may not go far enough in stressing the importance of a robust local transit network, and that development policies should provide more specific information regarding transit-friendly urban design strategies. Recommendations in the transit gap study included increasing the frequency of bus stops along West Lane and adding a BRT route along West Lane in the future (TMD, 2010). Although individual systems vary, a typical BRT system uses high-capacity buses, dedicated bus lanes, upgraded stations providing level access between platform and vehicle floor, pre-paid fare systems and boarding platforms to achieve a high-speed service typical of rail systems, at significantly less cost than rail (Institute for Transportation and Development Policy, 2007).

Green Building Policy

The City is presently implementing a Green Building Policy, under which all new City facilities will be certified under the Leadership in Energy and Environmental Design (LEED) program. As previously noted, LEED is a program of the U.S. Green Building Council providing third-party verification that a building or community is designed and built using strategies aimed at energy savings, water efficiency, CO2 emissions reduction, improved indoor environmental quality, and reduced impacts to and stewardship of resources. Stockton is the first city in the Central Valley to require conformance with LEED standards. Future City facilities shall be LEED-certified to the Silver level at a minimum.

Green Building Ordinance

On August 26, 2010, the City of Stockton adopted a Green Building Ordinance. The Green Building Ordinance requires that new residential and non-residential buildings to comply with the provisions of CALGREEN, including those related to water usage, construction material recycling, and energy efficiency. Although CALGREEN provides no specific energy efficiency targets, it notes that the Energy Commission standards include a 15% improvement above Title 24 standards as a goal for both residential and nonresidential buildings.

In addition, the Green Building Ordinance requires energy efficiency increases by 30% above the 2001 Title 24, Part 6 requirements for single-family residences adding more than 500 square feet or nonresidential buildings adding more than 5,000 square feet. The energy efficiency requirement applies to the entire structure, not just to the addition.

Other City Actions

City departments have been directed to work on other "green" initiatives, including policies and procedures to increase use of hybrid and Ultra Low Emission Vehicles, and biodiesel fuels. Energy audits have served to reduce energy consumption at City facilities, and water conservation measures have been implemented at City parks and public landscaping areas. City purchasing is increasingly green. City employees have increased recycling efforts through audits and increased the recycling of batteries, portable electronic devices, cans and bottles. The City continues to implement its long-standing water conservation program. Through its franchise waste haulers, the City operates a source-separated waste management system that maximizes diversion of recyclable materials from residential development. The City requires recycling of commercial and construction wastes by ordinance.

The City of Stockton is active in educating its citizens through on-line and other information resources. The City's website contains substantial information on the reduction of GHGs, energy and water conservation, recycling and other related matters. These web pages integrate related energy conservation programs available through Pacific Gas and Electric Company (PG&E).

3.0 GHG REDUCTION STANDARDS AND METRICS

This chapter provides a description of the applicable GHG standards and the metrics available to determine the effectiveness of proposed BCESP greenhouse gas reduction measures. It describes the GHG plans, regulations and standards that are applicable to the project, the measures based on these plans and regulations, and the extent to which these measures are quantifiable. This chapter provides a bridge between the regulatory framework described in Chapter 2.0 and the implementation measures evaluated in Chapter 4.0.

3.1 APPLICABLE PLANS, STANDARDS AND METRICS

Chapter 2.0 describes the various plans and regulations applicable to GHG reduction, from the international to the local level. The following describes the most applicable and quantitative of these to the BCESP, along with their quantitative or qualitative metrics against which the GHG reduction measures of the BCESP can be compared.

California Climate Change Scoping Plan (AB 32)

The California Climate Change Scoping Plan is the result of one of the provisions of AB 32. The Scoping Plan sets forth the means by which the target of reducing GHG emissions to 1990 levels by 2020 will be achieved. Meeting this objective will put the state on a trajectory to meet longer-range GHG reduction goals.

Achieving the 2020 GHG emissions target of 427 MMT CO2e will require a reduction of 169 MMT CO2e from the State's projected 2020 business-as-usual emissions estimate of 596 MMT CO2e, which is a reduction of approximately 29%. The Scoping Plan's Recommended Reduction Measures, which are listed in Table 3-1, are projected to result in a total GHG emission reduction of 174 MMT CO2e by 2020, which exceeds the target reduction by 5 MMT CO2e. Of these reductions, nearly 85% will be achieved under the proposed regional cap-and-trade system and "complementary measures." The other 15% would occur from sources that are not part of the proposed cap-and-trade system.

Several "Other Recommended Measures" are listed by the Scoping Plan, including reduction in GHGs associated with state and local government operations. However, these reductions are not counted toward the required reduction, but would instead contribute additional GHG reduction over and above the target levels. The potential contribution of local government-related reductions is not quantified in the Scoping Plan or counted in the projected reductions.

TABLE 3-1
CLIMATE CHANGE SCOPING PLAN
RECOMMENDED GREENHOUSE GAS REDUCTION MEASURES

Recommended Reduction Measures	Description of Measures	GHG Reductions By 2020 (MMT CO2e)	% Total
Estimated Reductions from Cap-and-Trade Program and Complementary Measures			
California Light-Duty Vehicle Greenhouse Gas Standards	Performance standards for GHG emissions from passenger vehicles.	31.7	
Energy Efficiency	Standards for buildings and appliances, use of energy-saving technologies.	26.3	
Renewables Portfolio Standard	33% of State's energy to be provided by renewable sources by 2020.	21.3	
Low Carbon Fuel Standard	Reduce carbon content of transportation fuels.	15	
Regional Transportation-Related GHG Targets	Regional GHG emission reduction targets through SB 375 process.	5	
Vehicle Efficiency Measures	Implement light-duty vehicle efficiency measures.	4.5	
Goods Movement	Implement adopted regulations for use of shore power for ships at berth; improve efficiency in goods movement activities.	3.7	
Million Solar Roofs	Ratepayer-financed incentive program to install 3,000 MW solar energy capacity.	2.1	
Medium/Heavy Duty Trucks	Adopt medium- and heavy-duty vehicle efficiency measures.	1.4	
High Speed Rail	Support implementation of a high speed rail system.	1	
Industrial Measures (for sources covered under cap-and-trade program)	GHG audits of large industrial sources; reduce GHG emissions from refineries.	0.3	
Additional Reductions Necessary to Achieve the Cap	Additional reductions from industrial sectors under cap-and-trade system, using compliance flexibility or market mechanisms.	34.4	
	Subtotal	146.7	84.3%
Estimated Reductions from Uncapped Sources/Sectors			
High Global Warming Potential Gas Measures	Adopt measures to reduce high global warming potential gases (e.g., refrigerants, perfluorocarbons).	20.2	
Sustainable Forests	Preserve forest capacity for carbon sequestration; encourage use of forest biomass for energy generation.	5

TABLE 3-1
CLIMATE CHANGE SCOPING PLAN
RECOMMENDED GREENHOUSE GAS REDUCTION MEASURES

Other Recommended Measures	Description of Measures	Estimated 2020 Reductions (MMT CO2e)
State Government Operations	Reduce impacts of state government operations on GHG emissions (e.g., Environmentally Preferable Purchasing, alternative transport for employees, invest in renewable energy)	1.0-2.0
Local Government Operations	Reduce impact of local government operations on GHG emissions (e.g., see Stockton's GHG reduction policies described in this chapter).	TBD
Green Buildings	Expand use of building practices that reduce GHG emissions (e.g., CA Green Building Code, City of Stockton Green Building Policy).	26
Recycling and Waste (mandatory commercial recycling, other measures)	Mandatory recycling by commercial activities, increased use of organic products, Environmentally Preferable purchasing,	9
Water Sector Measures	Increased water use efficiency and recycling (e.g., City of Stockton landscape water efficiency ordinance)	4.8
Methane Capture at Large Dairies	Capture of methane generated by dairies through manure digester systems.	1

TBD – to be determined

Source: Climate Change Scoping Plan, California Air Resources Board (2008)

Five of the Other Recommended Measures are estimated to produce an additional 42.8 MMTCO2e of greenhouse gas reductions, or an additional 7% reduction in baseline 2020 emissions. Totaling the estimated emissions associated with both the Recommended Reduction Measures and the Other Recommended Measures, the Scoping Plan could reduce greenhouse gas emissions to 11% below 1990 levels by 2020. The Other Recommended Measures, four of which are directly related to local government and/or new development are listed and discussed below.

The majority of the Scoping Plan's provisions, and the bulk of the emission reductions that would be achieved by the Plan, are statewide measures that are only indirectly connected to local government or to land development projects. These provisions operate on a statewide level but will produce GHG reductions at the local level. The Scoping Plan provisions do not provide a quantitative basis for comparison with local land development projects, as the Scoping Plan does not identify GHG measures that can be implemented on a local level. However, as discussed later in this chapter, the City of Stockton has established a quantitative interim GHG reduction target for projects.

Of the various Recommended Reduction Measures, one – Regional Transportation-Related GHG Targets – is addressed to local land development. This measure revolves around the implementation of SB 375. As described in Chapter 2.0, SB 375 requires each MPO to prepare a Sustainable Communities Strategy or an Alternative Planning Strategy that seeks to achieve targeted reductions in GHG emissions from cars and light trucks. In September 2010, CARB established "placeholder" reduction targets for San Joaquin Valley MPOs, including SJCOG, of 5% in 2020 and 10% in 2035. CARB will consider official targets in 2012; in the meantime, SJCOG intends to proceed with preparation of its Sustainable Communities Strategy.

The Scoping Plan would produce substantial reduction in GHG emissions through measures that would apply statewide to existing and new industrial, energy, commercial and residential development, and to on- and off-road travel associated with those uses. Some of these measures overlap or are redundant with proposed BCESP GHG reduction measures, for example the project's "smart growth" elements of the project that would tend to implement the Regional Transportation-Related GHG Targets line item; this measure, however, is only expected to result in a small percentage of the GHG emission reductions needed for the state as a whole.

Most of the GHG reductions identified in the Scoping Plan would parallel and add to reductions generated by the BCESP. These include GHG reductions associated with the proposed cap-and-trade system, new vehicle emission standards, new low-carbon fuel requirements, in-port energy use, goods movement efficiencies, increased energy generation and energy use efficiency, and new requirements on industrial and refinery operations. The City of Stockton calculated the approximate percentage of GHG emission reduction that would occur as a result of state and local actions. The Interim GHG Reduction Target section, discussed later in this chapter, explains the City's calculations.

Settlement Agreement with Attorney General

As discussed in Chapter 2.0, the City of Stockton, the Sierra Club and the California Attorney General reached a Settlement Agreement related to the implementation of Stockton's General Plan. The Attorney General intervened over concerns about the adequacy of the General Plan's EIR, specifically over the EIR's perceived failure to incorporate enforceable measures to mitigate the General Plan's GHG emission impacts (City of Stockton et al., 2008). Under the provisions of CEQA, potentially significant environmental impacts must be mitigated to the extent feasible.

Specifically, the Settlement Agreement required the City to address GHG reductions, primarily through preparation of the CAP. Section 9 of the Settlement Agreement includes Early Climate Protection Actions, which established requirements that are applicable to specific plans and large development projects until the City adopts the CAP. Section 9(a) requires that the City take the following actions, none of which are quantitative in nature:

1. Formulate proposed measures necessary for the project to meet any applicable GHG reduction targets.

2. Assess the project's vehicle miles traveled (VMT) and measures necessary for the project to reduce its VMT.

3. Assess the transit, especially bus rapid transit (BRT), needs of the project and identify project's fair share of the cost of meeting such needs.

4. Assess whether project densities support transit, and, if not, identify proposed increases in project density that would support transit service, including BRT service.

5. Assess the project's estimated energy consumption, and identify proposed measures to ensure that the project conserves energy and uses energy efficiently.

6. Formulate proposed measures to ensure that the project is consistent with a balance of growth between land within Greater Downtown Stockton and existing City limits, and land outside the existing City limits.

7. Formulate proposed measures to ensure that City services and infrastructure are in place or will be in place prior to the issuance of new entitlements for the project or will be available at the time of development.

8. Formulate proposed measures to ensure that the project is configured to allow the entire development to be internally accessible by all modes of transportation.

The City Council must review and consider studies and recommendations pertaining to the above actions, and it must conduct at least one public hearing prior to approval of the proposed project. The City Council must consider the feasibility of imposing conditions of approval. including mitigation measures pursuant to CEQA, based on the studies for each covered development project. The City Council also must consider, in any development approvals or development agreements, including a requirement that all such approvals or development agreements shall be subject to ordinances and enactments adopted after the effective date of any approvals of such projects or corresponding development agreements, where such ordinances and enactments are part of the Climate Action Plan. The City must complete the process described above prior to the first discretionary approval for a development project.

San Joaquin Valley APCD Climate Change Action Plan

Local air districts have a significant role to play in facilitating compliance with AB 32 for land use agencies and businesses. These agencies look to the local air districts for guidance in the evaluation of air-related impacts. In August 2008, the San Joaquin Valley APCD adopted its Climate Change Action Plan. The goals of the Climate Change Action Plan are, among others, to establish APCD processes for assessing the significance of project-specific GHG impacts for projects permitted by the APCD, and to assist local land

use agencies, developers and the public by identifying and quantifying GHG emission reduction measures for development projects (San Joaquin Valley APCD, 2009).

To assist lead agencies, project proponents, permit applicants, and interested parties in assessing and reducing the impacts of project-specific GHG emissions on global climate change, the APCD has adopted an approach to determine if project-specific GHG emissions would have a significant impact. This approach relies on the use of performance-based standards, otherwise known as Best Performance Standards, to assess significance of project-specific GHG emissions on global climate change. The use of Best Performance Standards is a method of streamlining the CEQA process of determining significance and is not a required emission reduction measure. Projects implementing Best Performance Standards would be determined to have a less than considerable contribution to potentially significant impacts on global climate change.

For projects not implementing Best Performance Standards, demonstration of a 29% reduction in GHG emissions from business-as-usual conditions is required to determine that a project would have a less than cumulatively significant impact. This requirement also applies to all projects requiring an Environmental Impact Report (EIR), whether or not the project incorporates Best Performance Standards. The 29% reduction standard was determined by the APCD to be consistent with the emission reduction targets established in the state's Climate Change Scoping Plan, which calls for a 28.4% reduction of emissions from the 2020 business-as-usual scenario (San Joaquin Valley APCD, 2009; CARB, 2008). Since the BCESP requires an EIR, quantification of GHG reductions and comparison to the SJVAPCD's threshold is appropriate.

In Appendix J of its *Final Staff Report: Addressing GHG Emissions Impacts under CEQA*, the APCD provides a table describing various GHG emission reduction measures, along with emission reduction values for each measure if available. Chapter 4.0 lists the measures relevant to the Specific Plan, along with the estimated emission reductions achieved.

It should be noted that the Attorney General's office, in a letter to the APCD dated November 2, 2009, has expressed reservations about APCD's approach to assessing GHG emission impacts. Among its concerns are a potential awarding of reduction credit for measures already required by state or local law, failure to consider impacts of past and current sources of emissions, and avoidance of environmental review by large projects that meet the APCD's thresholds (California Department of Justice, 2009). Nevertheless, this analysis plan will use the APCD's methodology as one of the available means for determining the BCESP's impacts on GHG emissions.

CAPCOA's CEQA and Climate Change

The California Air Pollution Control Officers Association (CAPCOA) is an association of chiefs of all 35 local air quality agencies in California. In January 2008, CAPCOA published its paper *CEQA and Climate Change* as a resource for public agencies as they establish procedures for reviewing GHG emissions from projects subject to CEQA. It considers the application of thresholds and offers three alternative programmatic

approaches toward determining whether GHG emissions are significant. *CEQA and Climate Change* also describes and evaluates available mitigation measures based on their economic, technological and logistical feasibility, and the effectiveness of these measures.

Appendix B of *CEQA and Climate Change* lists the mitigation measures that were evaluated, along with an estimated percentage decrease in GHG emissions associated with the measure. CAPCOA, in coordination with a consulting firm, performed a global search of mitigation measures in practice and under study that would reduce GHG emissions. Appendix B lists each measure, along with an assessment of their economical, technological and logistical feasibility and their emission reduction effectiveness, based on available documentation. The assessment of each measure's feasibility and effectiveness were based on various sources, including studies and information from state and local government agencies and air quality districts. Each mitigation measure, when such information is available, is assigned an emission reduction score based on a percentage reduction in emissions. The score system entails ratings of "high", "moderate" and "low" that refer to the level of the measure to provide a substantive, reasonably certain and long-term GHG emission reductions (CAPCOA, 2008).

Under CAPCOA's system of analysis, projects subject to CEQA would either qualitatively or quantitatively identify the amount of GHG emissions associated with the project, using analytical methodologies that depend on the significance threshold concept adopted.

The analysis would then apply the appropriate number of mitigation measures listed in Appendix B to the project to reduce GHG emissions below the adopted significance level. The analysis in this plan adopts the thresholds grounded in existing mandates and their associated GHG emission reduction targets, in this case AB 32 and the City's Interim Greenhouse Gas Reduction Target. This is essentially the same approach adopted by the San Joaquin Valley APCD in its Climate Change Action Plan.

Stockton Climate Action Plan and Interim GHG Reduction Target

In February 2008, the City of Stockton became a member of the International Council for Local Environmental Initiatives (ICLEI) and began working with ICLEI to create a baseline GHG inventory that would quantify all GHG emissions for the City as a whole for the year 2005. The baseline inventory would then be used as reference point to obtain an estimated inventory of 1990 and 2020 GHG emissions for the City.

As a part of the Settlement Agreement with the Attorney General and the Sierra Club, the City agreed to develop a CAP. Since the City has not yet adopted a CAP, no formal GHG emission reduction targets have been established yet. However, because several larger residential or mixed use development projects are presently in the review stage, the City has adopted an interim GHG emission reduction target to provide guidance on appropriate levels of greenhouse gas emission reductions. The interim emission reduction target is set at 28.7%, based on an estimated 2020 business-as-usual emissions of approximately 3,000,000 metric tons and estimated 1990 emission levels of approximately 2,100,000 metric tons (see Table 2-1 in Chapter 2.0). The emissions estimate is consistent with the methodologies established by the Local Governments for Sustainability and by CARB. The

reduction percentage is consistent with the 29% reductions called for in the state's Scoping Plan, which also aims for a reduction in GHG emissions to 1990 levels by 2020.

Based on an analysis of the GHG reduction measures proposed in the Scoping Plan, City staff concluded that approximately 77% of the GHG reduction objective in the Scoping Plan would be attained through state-wide measures, such as the Low Carbon Fuel Standard described previously. The remaining 23% would be addressed through local initiatives. Table 3-2 shows the City's assessment, based on the measures in the Scoping Plan. The implications for projects seeking to meet the City's interim GHG reduction targets are discussed in the following section.

3.2 SUMMARY OF METRICS

Under CEQA, the significance of an impact is determined by comparing the identified impact to a "significance threshold." A significant impact requires mitigation; a less than significant impact requires no mitigation. Significance thresholds may be quantitative or qualitative.

Significance thresholds for GHG emissions under CEQA have not been established at the state level. However, CEQA Guidelines Section 15064.4, enacted March 2010, provides direction to lead agencies in determining the significance of impacts from GHG emissions. Section 15064.4(a) calls on lead agencies to make a good faith effort, based on available information, to "describe, calculate or estimate" the amount of GHG emissions resulting from a project. The lead agency thus has the discretion to determine, in the context of a particular project, how to quantify GHG emissions.

As mentioned previously, there are no established, widely accepted, or officially adopted quantitative thresholds of significance against which to compare quantitative assessments of GHG emissions of the BCESP. Local efforts to establish such thresholds have been based primarily on the emission reduction targets set in the state's Climate Change Scoping Plan: a reduction of approximately 28.4% from business-as-usual emissions. For purposes of this analysis, projects that meet or exceed this reduction percentage shall be considered to have a less-than-significant impact on GHG emissions and climate change as they would be consistent with state and international GHG emission reduction targets.

Table 3-3 summarizes the GHG emission reduction thresholds established by the applicable plans and regulations discussed above. Each threshold is a set percentage reduction in GHG emissions from business-as usual conditions. Since the thresholds are derived from a common source, the reduction percentages are all similar.

TABLE 3-2
SCOPING PLAN GREENHOUSE GAS REDUCTION MEASURES
AND RESPONSIBLE ENTITIES

Recommended Reduction Measures	Responsible Entity	GHG Reductions By 2020 (MMT CO2e)
Estimated Reductions from Cap-and-Trade Program and Complementary Measures

3.2.1 Applicable GHG Reduction Threshold for Project

As previously discussed above, and as indicated in Table 3-3, GHG Significance Thresholds, the City has established an interim GHG reduction target of 28.7%. The City has determined that approximately 77% of the GHG reduction objective of the state's Scoping Plan would be met by state-wide measures, with the remainder to be met by local measures. Based on this, City staff has assumed that 77% of the 28.7% interim reduction target would be met by these state-wide measures, which would account for an approximately 22.1% GHG reduction in the City (0.77 x 28.7% = 22.1%). Therefore, local actions would be responsible for an approximately 6.6% GHG reduction (0.23 x 28.7% = 6.6%).

Although the reduction is a City-wide goal, this reduction would also apply to new land development. Therefore, if a project implements measures that reduce GHG emissions by 6.6% over "business as usual emissions" (emissions generated without any reduction measures applied to the project), then project GHG emissions would be considered less than significant by the City as the lead agency for CEQA purposes. A 6.6% GHG emission reduction, therefore, is the target reduction for the BCESP project.

TABLE 3-3
GHG SIGNIFICANCE THRESHOLDS

Source	Significance Thresholds (% Reduction in GHG Emissions)
CARB Climate Change Scoping Plan	28.4
APCD Climate Change Action Plan	29.0
City of Stockton Interim Target - overall	28.7
City of Stockton Interim Target – local share	6.6

3.2.2 Metrics Used in GHG Reduction Analysis

There are several metrics available for evaluating the potential significance of the GHG emissions of the BCESP. The metrics described previously consist of lists of potential GHG reduction or mitigation measures that are both quantitative and qualitative in nature. Methods for assessing the significance of GHG emissions are in the development stage and may be the subject of disagreement if not controversy. Nonetheless, the quantitative methods described above have been promulgated by public agencies and professional organizations concerned with atmospheric emissions.

Other available metrics are based on programmatic changes at the state level on generally qualitative points of comparison for evaluating the significance of a project's GHG emissions and the adequacy of its GHG reduction measures. These include:

State's *Global Climate Change Scoping Plan*
City of Stockton's *Climate Action Plan, available elements*
California Attorney General/City of Stockton Settlement Agreement
California Attorney General recommended GHG reduction measures

In the next chapter, the BCESP is evaluated using each of the quantitative metrics, as well as by a qualitative analysis. The evaluation of the BCESP using quantitative methods considers whether the project would meet established GHG reduction targets. The qualitative analysis would consider the consistency of the project with the relevant qualitative standards.

4.0 BCESP GHG REDUCTION PLAN AND CONSISTENCY ANALYSIS

This chapter evaluates the GHG reduction potential of the BCESP, with reference to the GHG reduction standards and metrics described in Chapter 3.0. This chapter begins with a brief description of the BCESP and the elements of the Specific Plan that reduce GHG emissions. Following the description, the "business as usual" emissions for the BCESP are described, then the BCESP is evaluated for its GHG reduction potential using two available quantitative systems.

Potential GHG reductions are quantified based on design features and measures contained in the BCESP. Based on the results, conclusions will be made as to whether the project meets the applicable GHG reduction threshold, which is the local share of the City's interim GHG reduction target described in Chapter 3.0.

This chapter also evaluates the consistency of the BCESP with applicable GHG reduction plans: the statewide Scoping Plan, the Stockton Climate Action Plan, and the Early Climate Protection Actions in the Attorney General's Settlement Agreement.

4.1 DESCRIPTION OF BEAR CREEK EAST SPECIFIC PLAN LAND USES

The BCESP project is located near the northeastern portion of the City of Stockton Metropolitan Area. It is presently within the unincorporated area of San Joaquin County, immediately adjacent to the City of Stockton limits. The project area is bounded on the north by Eight Mile Road, Bear Creek to the south, Union Pacific Railroad (UPRR) tracks to the east, and West Lane to the west.

The BCESP area encompasses 317.3 acres. Table 4-1 breaks down the proposed land uses within the BCESP area, along with the potential development range for each land use where applicable. The BCESP would designate 193 acres for residential uses, which would provide for development of up to 2,122 single and multi-family residential units. Low-density residential areas would consist largely of conventional single-family detached units on standard lots. Medium-density areas would consist of small lot detached or cluster-type detached homes as well as attached unit types. High-density residential areas are expected to consist primarily of attached units.

The BCESP proposes development of a series of five individual neighborhoods. They would be interconnected by the proposed circulation system and oriented around a proposed Community Park, a greenway along Bear Creek, paseos throughout the BCESP area, and other public spaces.

TABLE 4-1
BEAR CREEK EAST SPECIFIC PLAN
OVERALL LAND USE SUMMARY CHART

Proposed Land Use and General Plan Designation	Gross Acres	Units	Estimated Square Feet
Low Density Residential (LDR)	71.4	357-469	-
Low-Medium Density Residential (LMDR)	76.6	538-881	-
High-Medium Density Residential (HMDR)	31.9	415-468	
High Density Residential (HDR)	13.1	249-304	-
Commercial (C)	10.7	-	93,200
Office (O)	4.8	-	41,800
Industrial (IL)	8.9	-	95,800
Parks (CP/NP)	26.4	-	-
Open Space (OS)	29.4	-	-
Elementary School (IN)	10.0	-	-
Major Roads	34.1	-	-
Total	**317.3**	**1,557-2,122**	**230,800**

Notes:
du/ac – dwelling units per gross acre
F–R - floor-area ratio

The BCESP designates a 10.0-acre site for the future development of an elementary school by the Lodi Unified School District. School District officials indicate that the school would be a K-6 facility accommodating approximately 800 students. BCESP development would include approximately 26 acres of parks and 29 acres of open space. Included in this acreage are the Community Park, neighborhood and pocket parks, paseos, and the greenway corridor along Bear Creek.

Primary circulation through the BCESP area would be provided by extensions of Lt. Col. Mark Taylor Street and Ham Lane as minor arterials, as well as a two-lane extension of Leach Road. Neighborhood streets would consist of two-lane streets with 30 feet of paved width and an approximately 10-foot area on each side reserved for parkway strips and pedestrian circulation. Eight Mile Road and West Lane would provide circulation between the BCESP area and major destinations in the Stockton area.

The project overall would be dense enough to support the feasible operation of transit, consistent with the transit gap study that was prepared as part of the CAP process (refer to Settlement Agreement consistency analysis later in this chapter). The BCESP proposes several strategically placed bus stop locations in the Specific Plan area. Pedestrian facilities, mainly sidewalks, would be located along all proposed streets. The BCESP provides for an open space connector along the Bear Creek corridor that would, in conjunction with the adjoining community parklands, provide pedestrian and bicycle connectivity between proposed neighborhoods and arterial streets and the Community Park. In addition, the BCESP provides for development of a 12-foot paved pedestrian/bicycle path along the top of the north Bear Creek levee. The entire

development would be internally accessible by vehicles, bicycles and pedestrians and would allow similar access to adjacent neighborhoods and developments.

Water supply needs of the BCESP area would be met by the City of Stockton from its existing and approved surface and groundwater supplies. Wastewater services would be provided by existing and planned City of Stockton collection and treatment systems. Specific Plan development would include construction of a new storm drainage collection system, detention basin and pump station that would discharge to Bear Creek. Planned subdivision improvements would include installation of a non-potable water system that would be used for irrigation of proposed public parks and open space areas, streetscapes, schools and commercial landscaped areas. Electrical, gas, phone, cable and related Internet services would be extended to the Specific Plan area from existing facilities located along West Lane and Eight Mile Road, or from other utility systems in the vicinity.

4.2 BCESP "BUSINESS AS USUAL" GHG EMISSIONS

In evaluating potential GHG impacts of a project, one step is to determine the "business as usual" scenario. As defined in an ICF International memorandum to the City of Stockton, “business as usual” is a future scenario that does not include the impacts of any legislation or regulations designed to reduce GHG emissions (Held, 2010). Table 4-2 shows the projected GHG emissions from BCESP development under “business-as-usual” conditions.

For the BCESP, GHG emissions under “business-as-usual” conditions were determined primarily by using CARB’s URBEMIS 2007 (v 9.2.4) air quality computer modeling program. Most air quality districts, including the San Joaquin Valley APCD, accept URBEMIS outputs in air quality analyses for projects, and the APCD recommends URBEMIS use in its *Guide for Assessing and Mitigating Air Quality Impacts*. The URBEMIS program has been recently modified to calculate CO2 emissions. These include direct CO2 emissions from construction activities and area source operations, and indirect emissions from vehicular travel associated with the various proposed land uses.

URBEMIS bases its area and operational emission calculations on vehicle trips generated by proposed land use activities, using trip generation factors developed by the Institute of Transportation Engineers (ITE). For this emission estimate, trip generation factors provided in the traffic study for the Specific Plan by KD Anderson Transportation Engineers were used for emissions from residential land uses.

Area source indirect emissions were calculated using the General Reporting Protocol of the California Climate Action Registry. The California Climate Action Registry was established by California statute as a non-profit voluntary registry for companies and organizations with operations in the state to establish GHG emissions baselines against which any future GHG emission reduction requirements may be applied. The General Reporting Protocol assists Registry members in calculating their baseline emissions by providing formulas and emission factors, based on technical advice provided to the Registry by the State of

California. GHG emissions from solid waste were calculated using factors provided by a U.S. Environmental Protection Agency (EPA) publication on GHG emissions from landfills.

TABLE 4-2
SPECIFIC PLAN GREENHOUSE GAS EMISSIONS
BUSINESS-AS-USUAL SCENARIO

Source	Projected Emissions (metric tons CO2e/year) BCESP	SPA with Existing GP designations
Area Source Direct Emissions[1]	8,292	8,665
Area Source Indirect Emissions[2]	7,560	8,452
Electricity	*7,313*	*8,106*
Water	*247*	*346*
Mobile Source CO2 Emissions[1]	32,670	32,553
Light Industrial	*1,185*	*2,500*
Office	*831*	*N/A*
Commercial	*6,020*	*4,059*
Residential	*23,702*	*25,994*
School	*893*	*N/A*
Park	*39*	*N/A*

[2] Based on factors in California Climate Action Registry General Reporting Protocol, Version 3.1 (2009). and Quantifying GHG Mitigation Measures, CAPCOA (2010), Appendix B.
[3] Based on factors in EIR Chapter 15.3, Solid Waste, and in Solid Waste Management and Greenhouse Gases: A Life-Cycle Assessment of Emissions and Sinks (3rd ed.), U.S. Environmental Protection Agency (2006).
[4] URBEMIS 2007 v 9.2.4 (Appendix D). Assumes maximum of 250 residential units and 80,000 square feet of commercial development, and the average square footage of office and industrial development over a 15-year construction period.

Table 4-2 also shows business-as-usual GHG emissions from the SPA under existing Stockton General Plan 2035 designations. Existing General Plan designations were used to develop the City's GHG inventory, so emissions under General Plan designations were estimated to evaluate the variance BCESP emissions would have from the inventory baseline. Under existing General Plan designations, 283.3 acres of the SPA are designated for Low Density Residential development, and 12.0 acres are designated for High-Density Residential development. In addition, 6.0 acres are designated Commercial, and 16.0 acres are designated Industrial. Based on maximum allowable development densities or floor-area ratios (FARs) for the applicable designation, development under existing General Plan designations would generate an estimated 50,738 metric tons CO2e annually. This would be approximately 2.4% more than the estimated BCESP GHG emissions. Therefore,

the BCESP would generate fewer GHG emissions than development under existing General Plan designations, which were used to develop the City's GHG inventory.

4.3 GENERAL DESCRIPTION OF BCESP DESIGN FEATURES AND OTHER APPLICABLE GHG REDUCTION MEASURES

The following BCESP features and measures are those taken directly from the BCESP as currently proposed. These design features and applicable GHG reduction measures form the basis for the assessment and analysis of the BCESP's GHG emission reductions.

Mixed Use Development

The Specific Plan proposes a mix of residential, commercial, office, industrial, educational and recreational land uses in close proximity. The intent is to allow for residents to live, work and shop in the same area, thereby reducing the VMT that they may otherwise accumulate. Based on the results of the URBEMIS run, the project would generate an estimated 197,505 VMT under "business-as-usual" conditions. Table 4-3 provides the estimated VMT generated by the BCESP by land use. Since motor vehicle traffic is a major source of GHG emissions, a reduction in VMT would reduce GHG emissions. Moreover, many residents would be within walking or bicycling distance of their place of employment, shopping or schooling, thereby providing opportunities to further reduce VMT.

TABLE 4-3
SPECIFIC PLAN VEHICLE MILES TRAVELED
BUSINESS-AS-USUAL SCENARIO

Land Use	**Projected Annual VMT**
Light Industrial	7,172.63
Office	5,029.51
Commercial	36,376.78
Residential	143,288.88
School	5,397.87
Park	238.85
Total	**197,504.52**

Source: URBEMIS 2007 v 9.2.4 and kdAnderson Transportation Engineers

Onsite Elementary School

The proposed project includes an elementary school that is desired by the responsible school district and which would be located close to most of the proposed residential areas. Students and their parents can walk to the school, rather than drive to it. The school

would be connected to all residential areas through sidewalks, bicycle paths and paseos, providing alternative means of transportation to motor vehicles.

Onsite Recreational Amenities

The provision of parks and bicycle paths affords residents nearby recreational opportunities without having to drive elsewhere. The Community Park potentially would offer recreational facilities such as play fields, sitting/picnicking areas, active sports and walking areas, expansive lawn areas, and forested "garden" settings. Optional facilities may include tennis courts, baseball diamonds, soccer fields, a swimming pool, or other similar uses depending on the need and available space. Neighborhoods parks would include sports fields and courts, children's playgrounds, picnic areas and walking/bicycling pathways, among other amenities. The pocket parks would have facilities such as open turf, landscaping, tot lots and small-scale recreational facilities. Walking and bicycle paths would connect parks and open space areas. These paths would encourage more walking and bicycling, thereby further reducing VMT.

Support for Transit

Figure 5.1 of the Specific Plan indicates the dedication of land for the locations of four potential bus stops. One stop is located adjacent to the proposed commercial and high-density residential area in the southwestern portion of the Specific Plan area. Another is located next to the proposed elementary school. A third is located near the proposed office and light industrial areas in the north. The fourth is located in the center, adjacent to the Community Park. This location makes the bus stop accessible for office employees and nearby medium-density residential area residents.

Each bus stop is located adjacent to land uses expected to generate a substantial volume of transit users, which would make the provision of transit service more economically feasible. Additionally, the proximity of bus stops to potential users would encourage the use of transit over that of automobiles, a primary GHG source.

As previously noted in Chapter 2.0, the transit gap study conducted as part of the City of Stockton's CAP process recommended a BRT route on West Lane in the future. BRT would provide the passenger capacity and fewer stops of a rail system with the smaller expense of a bus system. This would make this form of transit more attractive to both the RTD and passengers. West Lane, which forms the western boundary of the Specific Area, is located near proposed commercial, high- and medium-density residential, and school land uses. The combination of BRT and these land uses potentially could lead to greater transit use, which would reduce automobile trips.

Project Orientation to Transit and Bicycle Routes

Section 3 of the Specific Plan describes Neighborhood 3, which contains the commercial area and some of the proposed high-density residential development, as an extension of

the West Lane transit corridor, a new commercial hub in northeast Stockton with opportunities for transit-oriented development. As discussed above, the proposed land uses in Neighborhood 3 would accommodate public transit. Neighborhood 4, which contains the office and light industrial areas, is located along Eight Mile Road, a major transportation corridor. Therefore, Neighborhood 4 would also be appropriately located for public transit, although no such service currently runs on Eight Mile Road.

Figure 5.5 of the Specific Plan presents the bicycle and pedestrian circulation plan. The sidewalks and bike paths extend throughout the Specific Plan area, connecting the parks, open space areas and the school. It also connects the commercial, light industrial and office areas. As illustrated in Specific Plan Figure 5.6, all residential areas are within one-quarter mile of a community feature that contains a major bicycle or pedestrian facility. As previously described, the proposed bus stops are located near commercial, light industrial and office areas.

Jobs/Housing Ratio

The "jobs/housing ratio" is a concept that indicates the potential for commuter traffic based on the number of jobs and number of housing units in a given area. The ideal ratio is 1.00, in which the number of jobs and number of housing units are equivalent. A ratio significantly greater than 1.00 indicates more jobs in the area than housing units, which may mean that residents outside the area are commuting to jobs in that area. Conversely, a ratio significantly less than 1.00 means fewer jobs than housing units, which may mean that residents in the area are commuting to jobs outside the area.

A quick way to develop an estimate of the number of employees that would be generated by a project would be to use a factor of 1 employee for every 400 square feet of commercial, office and industrial development. This is a commonly used factor in employment estimates by economic development consultants (Walter Kieser, pers. comm.). Based on the projected square footage in Table 4-1, the potential maximum number of employees that Specific Plan development would generate would be 844. When this estimate is divided by the number of housing units, the jobs/housing ratio ranges from 0.40 to 0.73. According to the project applicant, the target number of housing units is 1,853. This would result in a jobs/housing ratio of 0.46. This would indicate that future development would lead to a net commute by residents to other places of employment. However, it should be noted that the Specific Plan includes features designed to encourage less motor vehicle travel and more use of alternative modes of transportation, as described above.

Landscape Guidelines

Section 10 of the Specific Plan sets forth design guidelines for residential, non-residential and park development. Included in this section are guidelines for landscapes of streets and parking lots. The general guidelines for streetscapes encourage shading, canopies and "sustainable" major tree planting, thereby reducing "heat islands." Streets would have trees

planted on both sides, spaced so as to accommodate one tree per lot or one tree per 35 lineal feet, whichever scenario results in a greater number of trees.

Parking lots will have trees planted within them at a minimum ratio of one tree for every five parking spaces. Tree planting would provide additional shade, particularly for residences, and reduce the heat-island effect. In turn, this would reduce air conditioning use in summer, thereby reducing demand for electricity and the need for power plants to generate it. Since most power plants rely on fossil fuels to generate electricity, reduced electrical demand would lead to fewer GHG emissions.

Water Usage

Development under the Specific Plan would lead to an increased usage of potable water. However, the Specific Plan contains two elements that would mitigate the additional water demand. First, as described in the Utilities subsection, the Specific Plan proposes the installation of a non-potable water system that would be used for irrigation of proposed public parks and open space areas, streetscapes, schools and commercial landscaped areas. Second, the proposed design guidelines encourage the use of plants that are drought-resistant, low irrigation and "sustainable." Both elements would lead to the consumption of less potable water than would otherwise be the case.

Building Construction

Building construction would be in accordance with the “green” building requirements of the City of Stockton. As described in Chapter 2.0, the City has adopted a Green Building Ordinance that requires compliance with CALGREEN. CALGREEN requires that every new building constructed in California to meet energy efficiency, water consumption, and construction waste and material standards.

4.4 QUANTIFIED ASSESSMENT OF GHG REDUCTION POTENTIAL OF THE BCESP

The following section provides a quantified assessment of GHG reduction resulting from design features incorporated as part of the BCESP and from additional GHG reduction measures described in the BCESP, based on the quantification systems described below.

There are two quantification systems applicable to the BCESP – the San Joaquin Valley APCD and the California Air Pollution Control Officers Association (CAPCOA). Both quantification systems are based on lists of mitigation measures mentioned in Chapter 3.0. Taking a conservative approach, both quantification systems have been used in analyzing GHG reductions associated with the project. A discussion of these systems is provided below.

San Joaquin Valley APCD System

In August 2008, the San Joaquin Valley APCD adopted its Climate Change Action Plan. The Climate Change Action Plan directed the APCD's Air Pollution Control Officer to develop guidance to assist APCD staff, Valley businesses, land use agencies and other permitting agencies in addressing GHG emissions as part of the CEQA process. A product of this direction to provide CEQA guidance is the *Final Staff Report – Climate Change Action Plan: Addressing GHG Emissions Impacts*, presented to the APCD Board in December 2009. For projects requiring EIRs, Appendix J of the *Final Staff Report* provides a table of GHG emission reduction measures, along with a point value that corresponds to a percentage decrease in GHG emissions when available.

California Air Pollution Control Officers Association (CAPCOA) System

CAPCOA published its paper *CEQA and Climate Change* in January 2008. The purpose of the paper is to provide a resource for public agencies as they establish procedures for reviewing GHG emissions from projects subject to CEQA. *CEQA and Climate Change* also describes and evaluates available mitigation measures based on their economic technological and logistical feasibility, and the effectiveness of these measures. Appendix B of *CEQA and Climate Change* lists the mitigation measures that were evaluated, along with a percentage decrease in GHG emissions when available.

APCD and CAPCOA Systems Applied to BCESP

This analysis was part of a process in which proposed GHG reduction design features and additional GHG reduction measures were identified in the BCESP and compared with those features and measures listed in the APCD and CAPCOA systems. The total reduction value of each feature and measure was identified, based on values contained in the APCD and CAPCOA quantification systems. The values were then totaled and compared with the local share of the City's interim GHG reduction target, which is the threshold used to indicate if the BCESP is in compliance with the City's GHG reduction policies.

The analysis also identifies GHG reduction measures that are part of the BCESP that are not quantified under both the APCD and CAPCOA systems. This does not mean that these measures do not reduce GHG emissions or have no value in reducing them. Rather, these measures currently do not have a reduction value assigned to them by either the APCD or CAPCOA.

One reason a measure may not be quantified is that certain measures work in relation with other measures as part of a comprehensive approach. This comprehensive approach makes it more difficult to assess reductions attributable to each individual measure (CAPCOA, 2008). Nevertheless, these measures are listed in this chapter, as they are considered to have value in reducing GHG emissions.

4.4.1 BCESP GHG Reduction Based on Design Features per APCD System

As described previously in this chapter, the BCESP contains several design features similar to those identified in the APCD *Final Staff Report* that are expected to reduce GHG emissions associated with the project. Table 4-4 identifies the GHG reduction measures already incorporated into the Specific Plan design, along with the Specific Plan section in which the measure is described in more detail, the type of reduction measure (transportation, commercial, residential) and their emission reduction values based on the APCD system.

TABLE 4-4
APCD GHG REDUCTION MEASURES
INCORPORATED IN BCESP DESIGN

Measure	Specific Plan Section	Measure Type	Point Value
Proximity to bike path/bike lanes – within ½ mile of Class I or II bike lane	6.5, 6.6	T	0.625
Pedestrian network connecting to planned external streets and pedestrian facilities	2.3, 6.5, 6.6	T	0.500
Bus shelter for planned transit service	6.5	T	0.250
Traffic calming (bike lanes, center islands, roundabouts, speed humps, etc.), 25% streets, 25% intersections	6.4	T	0.250
Orientation toward existing transit, bikeway or pedestrian corridor	2.3, 6.5, 6.6	C/R	0.500
Orientation toward planned transit, bikeway or pedestrian corridor	2.3, 6.5, 6.6	C/R	0.250
Residential density with planned bus rapid transit	4.3	R	3.250
Suburban mixed-use	2.3, 4.3	C/R	3.000
Street grid	6.2.1	R	1.000
Non-roof surfaces–provide shade (within 5 years) or use light-colored/high-albedo materials (reflectance of at least 0.3) and/or open grid pavement (at least 30%) for parking lots, walkways, etc.	9.6	C	1.000
Total GHG Reduction Points/% Reduction Value			**10.625**

Notes: T – Transportation, C – Commercial, R – Residential

As indicated in Table 4-4, the BCESP contains features that would reduce GHG emissions by over 10.5%, based on the APCD's quantification system. This would exceed the City's interim target local share threshold of 6.6%. Thus, the BCESP's design features would be sufficient to reduce GHG emissions generated by the project to a level considered less than significant from a CEQA perspective, and consistent with applicable state and local GHG reduction plans.

4.4.2 BCESP GHG Reduction Based on Additional Measures per APCD System

The BCESP also identifies various GHG reduction measures similar to those identified in the APCD *Final Staff Report* that could be implemented in conjunction with the design features. Table 4-5 identifies these additional GHG reduction measures, along with the type of reduction measure and their emission reduction values based on the APCD system.

The table also includes measures in the BCESP that are identified in the APCD system, but do not have quantified reduction values assigned to them. This does not mean that these measures do not reduce GHG emissions or have no value in reducing them. Rather, these measures currently do not have a reduction value assigned to them by the APCD. The type of reduction measure is not identified for these non-quantified measures.

The additional GHG reduction measures in the BCESP would generate a GHG reduction of approximately 9.75%, based on the APCD's quantification system. Combined with the design features listed in Table 4-4, the project would yield a 20.375% reduction in GHG emissions. This amount would significantly exceed the 6.6% local share of the 28.7% interim greenhouse gas reduction target set by the City of Stockton.

TABLE 4-5
APCD GHG REDUCTION MEASURES
INCORPORATED IN BCESP MEASURES

Measures	Measure Type	Point Value
Quantified Measures		
Bike parking, non-residential projects	T	0.625
Bike parking at multi-unit residential	T	0.625
Pedestrian barriers minimized	T	1.000
Bus shelter for existing transit service	T	0.500
Provide minimum amount of parking required by code	T	3.000
Pedestrian pathway through parking	T	0.500
Off-street parking, near mixed-use/high-density land uses	T	1.500
Energy Star roof materials	C/R	0.500
Exceed Title 24 energy conservation requirements by 20%	C/R	1.000
Solar orientation – design residences to take advantage of sun and to maximize shade	C/R	0.500
Total Point Value – Quantified Measures		**9.750**
Non-Quantified Measures		
Bike lane street design		--
Bike and pedestrian design		--
School siting		--
Open space		--
Land use density – 9+ dwelling units/acre along bus routes and at bus stops		--

TABLE 4-5
APCD GHG REDUCTION MEASURES
INCORPORATED IN BCESP MEASURES

Measures	Measure Type	Point Value
Solar design – developers to offer buyers optional packages that incorporate passive solar design and solar heaters		--
Vehicle idling – limit idling time for commercial vehicles, including delivery and construction vehicles		--
Tree planting		--
Local farmer's market as allowable use in the Community Park		--
Community gardens as allowable use in the Community Park		--
Developers shall install energy-efficient appliances and equipment		--
Developers shall offer buyers optional packages that incorporate photovoltaic roofing tiles		--
Natural gas stoves/no wood-burning stoves in residential buildings		--

Notes: T – Transportation, C – Commercial, R – Residential

4.4.3 BCESP GHG Reduction Based on Design Features per CAPCOA System

As described previously in this chapter, the BCESP contains several design features similar to those identified in the CAPCOA document *CEQA and Climate Change* that are expected to reduce GHG emissions associated with the project. Table 4-6 lists the CAPCOA GHG reduction measures already incorporated in the BCESP design features, along with the Specific Plan section in which the measure is indicated and the type of reduction measure. Many of the measures evaluated by CAPCOA are the same as those incorporated by the San Joaquin Valley APCD in its *Final Staff Report*. However, some of the measures have different values, based on the sources cited and the specificity of the measure.

As indicated in Table 4-6, the BCESP contains features that would reduce GHG emissions by approximately 14.5%, based on CAPCOA's quantification system. This would exceed the City's interim target local share threshold of 6.6%. Thus, the BCESP's design features would be sufficient to reduce GHG emissions generated by the project to a level considered less than significant from a CEQA perspective, and consistent with applicable state and local GHG reduction plans.

4.4.4 BCESP GHG Reduction Based on Additional Measures per CAPCOA System

The BCESP also identifies various GHG reduction measures similar to those identified in *CEQA and Climate Change* that could be implemented in conjunction with the design features. Table 4-7 identifies these additional GHG reduction measures, along with the type of reduction measure and their emission reduction values based on the CAPCOA system. The table also includes measures in the BCESP that are identified in the CAPCOA system, but do not have quantified reduction values assigned to them. The type of reduction measure is not identified for these non-quantified measures.

TABLE 4-6
CAPCOA GHG REDUCTION MEASURES
INCORPORATED IN BCESP DESIGN

Measure	Specific Plan Section	Measure Type	Percent Decrease
Proximity to bike path/bike lanes	6.5, 6.6	T	0.625
Pedestrian network connecting to planned external streets and pedestrian facilities	2.3, 6.5, 6.6	T	1.000
Bus shelter for existing/planned transit service	6.5	T	1.000
Traffic calming	6.4	T	0.250
Office/mixed use density	2.3, 6.5, 6.6	C	0.100
Orientation toward existing/planned transit, bikeway or pedestrian corridor	2.3, 6.5, 6.6	C/R	0.500
Residential density (sufficient density for new residential development to support use of public transit)	4.3	R	6.000
Street grid	6.2.1	R	1.000
Suburban mixed-use	2.3, 4.3	C/R	3.000
Non-roof surfaces	9.6	C	1.000
	Total Percent Decrease		**14.475**

Notes: T – Transportation, C – Commercial, R – Residential

The GHG reduction of additional measures in the BCESP would generate a GHG reduction of approximately 11.75%. Combined with the additional measures listed in Table 4-6, the project would yield a 26.225% reduction in GHG emissions. This amount would significantly exceed the 6.6% local share of the City's 28.7% GHG emission reduction target.

4.5 BCESP CONSISTENCY WITH APPLICABLE STATE AND CITY GHG REDUCTION PLANS AND AGREEMENTS

4.5.1 BCESP Consistency with California Global Climate Change Scoping Plan

As noted in Chapter 2.0, the California Global Climate Change Scoping Plan includes 16 recommended measures that would produce estimated GHG reductions of 174 MMT CO2e by 2020 and achieve the State's goal of reducing GHG emissions to 1990 levels by 2020. Of these 16 measures recommended by the Scoping Plan, only one measure is directly related to land development: Regional Transportation-Related GHG Targets. The Scoping Plan relies on SB 375 to cause long-term changes in land use patterns that would result in GHG reductions. As discussed in Chapter 2.0, CARB has established "placeholder" GHG reduction targets for SJCOG, which will begin a process for developing a strategy that implements these targets. The BCESP, however, embodies many of the characteristics likely to be favored under this Scoping Plan measure, including

mixed-use development, proximity to existing and future transit, and pedestrian accessibility.

TABLE 4-7
CAPCOA GHG REDUCTION MEASURES
INCORPORATED IN BCESP MEASURES

Measure	Measure Type	Percent Decrease
Quantified Measures		
Bike parking, non-residential projects	T	0.625
Bike parking at multi-unit residential	T	0.625
Pedestrian barriers minimized	T	1.000
Minimum parking required by code	T	6.000
Pedestrian pathway through parking	T	0.500
Off-street parking, near mixed-use/high-density land uses	T	1.000
Energy Star roof materials	C/R	0.500
Exceed Title 24 energy conservation requirements by 20%	C/R	1.000
Solar orientation	C/R	0.500
Total Percent Decrease – Quantified Measures		**11.750**
Non-Quantified Measures		
Local farmer's market as allowable use in the Community Park		--
Community gardens as allowable use in the Community Park		--
Developers shall install energy-efficient appliances and equipment		--
Landscaping – project landscaping shall use drought-resistant native trees, trees with low emissions and high carbon sequestration potential.		--
Natural gas stoves/no wood-burning stoves in residential buildings		--
Developers shall offer buyers optional packages that incorporate use of solar water heaters		--
Electric yard equipment compatibility – provide electrical outlets at residential building exterior areas		--
Shading mechanisms for windows, porches, patio and walkway overhangs		--
Ceiling/whole-house fans installed in residential buildings		--
Programmable thermostats installed in residential buildings		--
Passive heating and cooling systems installed in residential buildings		--
Day lighting systems (e.g., skylights, light shelves, interior transom windows) installed in residential buildings		--
Low water-use appliances, such as low-flow shower heads and toilets, installed in residential buildings		--

Notes: T – Transportation, C – Commercial, R – Residential

Six "Other Recommended Measures" are set forth in the Scoping Plan, and of these one is relevant to the project: Green Buildings. The State's green building strategy involves State-led efforts to encourage or require adherence to green building standards across the economy. The California Green Building Code (CALGREEN) has been adopted by the state and will become mandatory in 2011. The City of Stockton had adopted CALGREEN in August 2010 as part of its Green Building Ordinance, and future development on the

BCESP site must comply with CALGREEN requirements. In addition, a proposed BCESP GHG reduction measure would offer residences with optional solar energy facilities, which would be consistent with the Million Solar Roofs program, a Scoping Plan recommended measure. As a result, the BCESP will be consistent with this element of the Scoping Plan.

4.5.2 BCESP Consistency with City of Stockton Climate Action Plan

The City of Stockton is in the process of preparing a CAP for consideration by the City Council. The City has adopted an interim GHG reduction target, as discussed previously in this chapter. Potential GHG reduction measures that could be included in the BCESP would produce sufficient GHG reduction to exceed the local share of the City's interim target. The Settlement Agreement also includes a provision that the City consider adopting a green building ordinance. The City has adopted such an ordinance, and the BCESP would be required to comply with all of its provisions.

Otherwise, CAP policy direction has not been established and is not expected in the immediate future. Anticipating the time required for CAP preparation, the Settlement Agreement includes Section 9 Early Climate Protection Actions, which applies to the consideration of major development projects during the CAP preparation process. Consistency of the BCESP with the Early Climate Protection Actions is discussed below. The BCESP includes no plan or provision that would impede the CAP preparation process or prevent adoption of the CAP.

4.5.3 BCESP Consistency with Early Climate Protection Actions, Section 9 of City's Settlement Agreement with California Attorney General

Section 9 of the City of Stockton's Settlement Agreement with the California Attorney General and the Sierra Club includes Early Climate Protection Actions, which apply to the consideration of major development projects until formal adoption of the CAP. Section 9(a) requires that the City staff take the steps identified in the following numbered items; this section provides the analysis of consistency with the Section 9 requirements. Based on the following analysis, the BCESP is consistent with the relevant provisions of the Early Climate Protection Actions.

Some of the analyses cannot be fully accomplished, either because a certain component of the Early Climate Protections Actions has not been completed or there is no quantitative basis for the analysis. For example, a proportionate share of providing transit and/or BRT to the BCESP area cannot be determined until the overall costs have been established and new development's share of these costs have been defined. Similarly, other than the project's location within the existing urbanized area, a project's contribution to downtown Stockton development cannot be defined until a system for such contributions is developed. It is anticipated that the project will be conditioned to participate in this and other required CAP programs, if and when they are adopted.

Early Climate Protection Actions

1. *Formulate proposed measures necessary for the project to meet any applicable GHG reduction targets.*

The State of California has identified targets for stabilization of global climate change in AB 32. As discussed above, the BCESP is consistent with all of the applicable Scoping Plan's recommended measures. The City of Stockton has adopted an interim greenhouse gas reduction target of 28.7% from estimated 2020 "business-as-usual" emission levels, which is the reduction needed to achieve a citywide reduction of GHG emissions to 1990 levels by 2020. The interim target is consistent with the state's Scoping Plan objective. As discussed above, the proposed project, with recommended GHG reduction measures, would exceed the local share of the City's interim target.

2. *Assess the project's VMT and formulate proposed measures that would reduce the project's VMT.*

Vehicle miles traveled (VMT) is a measure of the total miles traveled by all vehicles in a specified area for a specified time. Over a large geographic area, VMT represents the amount of travel associated with the existing or future land uses in the area. As discussed by CARB early drafts of the adopted Scoping Plan, VMT is an indicator of transportation-related GHG emissions, and VMT is one important leg of a "three-legged stool" required to reduce these emissions; the other two elements are increased vehicle efficiency and low-carbon fuels, both of which are addressed on a statewide level by Scoping Plan recommendations. No specific VMT targets have been established by the City or the regional agency (SJCOG) to date. As discussed above, measures that would reduce VMT will be developed in conjunction with the SB 375 planning process.

The project has been compared to the quantitative and qualitative GHG reduction systems evaluated in this chapter. The project is mixed-use and is inherently VMT-reducing, and all potential VMT reduction measures have been incorporated into the project. The BCESP proposes mixed-use development, with on-site shopping, employment opportunities and recreational amenities. Also, measures have been added to allow the project to exceed the available GHG reduction scoring systems.

Based on the results of the URBEMIS run, the project would generate an estimated 197,505 VMT under "business-as-usual" condition. If the SPA were developed under existing Stockton General Plan 2035 designations to the maximum level allowed, land uses would generate approximately 198,012 VMT, according to URBEMIS. Therefore, the BCESP would represent a slight decrease in VMT from development under General Plan designations, which were used in developing the City's GHG inventory.

3. *Assess the transit, especially BRT, needs of the project and identify the project's proposed fair share of the cost of meeting such needs.*

The San Joaquin Regional Transit District (SJRTD) operates existing fixed-route transit service in the Stockton area. According to a recently released transit gap study (see below), SJRTD carries approximately four million passengers annually. Transit needs are met

operationally by the SJRTD through route modification and expansion; the developer's contribution has been to provide the necessary infrastructure, including bus turnouts, bus shelters and other related improvements as required by conditions of subdivision or shopping area approvals. New development projects are required to pay their fair share of the cost of needed transportation and transit facilities and to ensure that essential facilities and services be installed prior to or concurrent with new development, or phased as specified in the applicable environmental documents.

The BCESP vicinity is presently served by existing fixed-route transit, although at a relatively low level. SJRTD routes would need to be modified to serve proposed land uses, in particular proposed commercial and employment areas and schools that would be important transit destinations. As noted in Chapter 16.0 of the BCESP, Transportation, provision of needed public transit facilities in conjunction with new development in those portions of the SPA with relatively concentrated demand is required. These areas would include the commercial and high-density residential area at West Lane, the proposed office and industrial areas along Eight Mile Road, and the elementary school. The project EIR will require transit improvements as mitigation for increased transit demand.

The Settlement Agreement requires that the City of Stockton complete a transit gap study and submit for adoption a transit program by October 2010. The SJRTD and City of Stockton have completed the transit gap study, and no transit gaps specific to the BCESP area were identified. As noted in Chapter 2.0, the City has not adopted a transit program based on the transit gap study.

Funding sources for transit costs are identified in the SJRTD's *Short Range Transit Plan* and *BRT Master Plan*. These funding sources, while including potential indirect contributions from local traffic impact fees in street improvements, and direct contributions from the Regional Transportation Impact Fee (RTIF), do not anticipate direct funding from development projects. As provided in the BCESP, development within the SPA would be liable for the provision of transit improvements in consultation with the SJRTD. The project would also be liable for any contribution to BRT costs that are adopted by the City in its CAP. BRT service is discussed in the analysis for Early Climate Protection Action No. 4 below.

At this time, there is no available means for quantifying costs of transit expansion or a BRT system that would not otherwise be met by identified funding sources. In the event that costs are quantified and a basis for proportionate cost sharing is adopted, it is assumed development within the BCESP would be liable for payment of those fair share costs. Chapter 12 of the BCESP discusses policies related to infrastructure development that would be implemented, including transportation facilities. These policies establish landowners, developers and builders as bearing the primary responsibility for funding all infrastructure and facilities; require funding mechanisms that equalize costs among individual properties; and allow the City to establish financing mechanisms for funding infrastructure improvements in the SPA.

4. *Assess whether project densities support transit, and, if not, identify proposed increases in project density that would support transit service, including BRT service.*

The Stockton General Plan 2035 includes a number of policies that are applicable to and supportive of the expansion of transit and BRT service. BRT operations include distinct vehicles, more regular and frequent stops at stations, specialized fare vending machines, and use of traffic signal priority devices. A BRT route (called Metro Express) is currently established along the Pacific Avenue corridor between Hammer Lane and downtown Stockton. Construction is underway for a second BRT route along Airport Way between downtown Stockton and the airport, while a third BRT route along Hammer Lane is scheduled for implementation by 2013. The General Plan 2035 "Future Transit Network" map identifies potential BRT routes and facilities, based on a BRT Master Plan for San Joaquin County completed by SJRTD. Both Eight Mile Road and West Lane have been designated as potential BRT routes; however, there are no plans to establish BRT service on either street in the immediate future.

Research cited in the Stockton General Plan EIR indicates that transit and ridership are related to population size and employment, the proximity of homes and workplaces to transit services, and the quality of transit service in comparison to other travel options. The research indicates that the feasibility of various transit modes is related to the following residential densities (City of Stockton 2006):

Local Bus Service	4 units/acre
Express Bus Service/Bus Rapid Transit	7 units/acre
Light Rail	9 units/acre

The BCESP proposes housing units of varying densities, from single-family houses to apartments. Based on information in Table 4-1, the residential density in the BCESP would range from 8.1 to 11.0 units/acre. The lower densities would support local bus service, while the higher densities would also support express bus/BRT service. For the maximum number of residential units (2,122), the residential density would be approximately 11.0 units/acre, which would support express bus/BRT service as well as local bus service. In addition, the higher-density residential designations have been strategically placed along the potential BRT routes identified as Eight Mile Road and West Lane, in order to enhance accessibility and possible use of mass transit.

5. *Assess the project's estimated energy consumption, and measures to ensure that the project conserves energy and uses energy efficiently.*

Energy conservation and use of alternative or renewable energy sources can directly reduce GHG emissions by reducing the combustion of natural gas and fossil fuels to generate electricity. Energy use for building lighting, water heating, space heating and cooling can be reduced through passive and active solar architecture, solar water heating, cool roofs and paving, shading of paved areas, increased ventilation, and energy efficient HVAC equipment, controls, lighting and appliances.

Potential residential energy usage was estimated with the California Energy Commission's *California Statewide Residential Appliance Saturation Study* (KEMA-XENERGY, 2004). Calculations are based on the proposed maximum number of residential units (2,122), with 304 of these units being multifamily. The average annual electrical and gas usage for a single-family residence in the PG&E service area is 8,117 kWh and 489 therms, respectively. For multifamily units in the PG&E service area, annual average electrical and gas usage is 3,451 kWh and 224 therms, respectively. Based on these factors, BCESP residential uses would consume an average of approximately 15,806,000 kWh of electricity and 957,000 therms of natural gas annually. Total annual project energy consumption by residential and commercial land uses would amount to approximately 18,718,000 kWh of electricity and 988,000 therms of natural gas.

Potential energy usage by proposed commercial uses in the BCESP was estimated with the California Energy Commission's *California Commercial End-Use Survey* (Itron, 2006). Based on proposed square footage and statewide annual electrical use intensities per square foot for retail (14.06 kilowatt-hours or kWh) and office (17.7 kWh) uses, commercial uses would consume an average of approximately 2,912,000 kWh of electricity annually. Based on statewide annual natural gas use intensities per square foot for retail (0.22 therms) and office (0.05 therms) uses, commercial uses would consume an average of approximately 31,000 therms of natural gas annually. Energy consumption of industrial land uses cannot be determined, as the specific industrial activities that will be in the SPA are unknown.

As discussed previously, the City of Stockton has adopted a Green Building Ordinance that requires new development to be constructed in accordance with CALGREEN, which includes provisions to increase energy efficiency and reduce energy use. Future construction in the SPA would be subject to CALGREEN standards. These measures would reduce energy consumption and increase energy efficiency.

6. *Formulate proposed measures to ensure that the project is consistent with a balance of growth between land within Greater Downtown Stockton and existing City limits, and land outside the existing City limits.*

The parties to the Settlement Agreement "recognize that development on the urban fringe of the City must be carefully balanced with accompanying infill development to be consistent with the State mandate of reducing GHG emissions, since unbalanced development will cause increased driving and increased motor vehicle GHG emissions" (City of Stockton et al., 2008). The BCESP is located in an unincorporated portion of San Joaquin County on the edge of the Stockton city limits; therefore, the project is subject to discussion concerning a "balance of growth." It should be noted that the BCESP site has been designated for urban development since at least 1990, when it was identified for such development in the City's 1990 General Plan. In addition, areas to the west and south of the project site are proposed for development.

Section 6 of the Settlement Agreement states that City staff, within 12 months of the effective date of the agreement, shall submit for City Council adoption policies and programs that require at least 4,400 units of Stockton's new housing growth to be located in Greater Downtown Stockton (defined as generally bordered by Harding Way, Charter

Way (MLK), Pershing Avenue and Wilson Way). An additional 14,000 of Stockton's new housing units shall be located within the City limits at the time of the effective date of the Settlement Agreement.

While the Settlement Agreement addresses the concern of a "balance of growth," standards for balance have not been defined. It is anticipated that such standards and the measures that can be used to ensure balance will be one of the results of CAP preparation and adoption. Without the availability of standards and options for action, the BCESP can make no direct contribution to maintaining the balance sought by the Settlement Agreement. It is expected that future development under the BCESP would be required to comply with the applicable requirements of the adopted CAP. Chapter 5.0 of the GGRPA states that the BCESP may need to be amended to incorporate any requirements and measures mandated by the CAP once adopted by the City.

7. *Formulate proposed measures to ensure that City services and infrastructure are in place or will be in place prior to the issuance of new entitlements for the project or will be available at the time of development.*

Existing City policies and procedures will ensure that all City services are in place at the time of development; no additional measures are needed. City services, including police protection and fire protection, will be extended to the SPA immediately upon its annexation into the City. Annexation of the SPA will also be required to occur before any urban development pursuant to the BCESP can proceed, in which the initial development would extend water and wastewater backbone infrastructure to the SPA.

City service providers have been and will continue to be involved in the review of the BCESP and the drafting of mitigation measures and conditions of approval. Among other things, and as documented in this EIR, this involvement has resulted in the planned location for proposed streets and parks. The existing City project review process will ensure that the BCESP reflects the needs of these providers. Similarly, City staff review, CEQA review and the detailed technical studies prepared for the project EIR would ensure that the project's infrastructure needs are met at the time of development. The timing of these improvements would be established by EIR mitigation measures or will be established in conditions of approval for subdivision maps and other entitlements.

8. *Formulate proposed measures to ensure that the project is configured to allow the entire development to be internally accessible by all modes of transportation.*

Existing City plans and standards will ensure that adequate transportation access is provided to all portions of the BCESP. Street standards will ensure that adequate transit access is available on collector and arterial streets. Street improvements will be required to conform to Stockton's bicycle plan, including the provision of bike lanes, signage or other improvements as required. The BCESP includes specific provisions for pedestrians in the form of sidewalks as well as pedestrian walks that allow more direct access between proposed residential neighborhoods and planned commercial and employment areas.

5.0 CONCLUSION

5.1 CONCLUSIONS OF ANALYSIS

As presented in Chapter 4.0, an analysis was conducted to determine the GHG reduction value of BCESP design features and measures, based on values assigned to similar reduction measures in the APCD and CAPCOA quantification systems. The ultimate objective of this process was to have the BCESP contain features and measures that would reduce GHG emissions from an established "business as usual" level to one that meets the local share of the City's interim GHG reduction target of 28.7%, which is 6.6%. Based on results shown in Table 4-4 through 4-7, the various design features and measures in the BCESP, for which reduction values have been identified, would reduce GHG emissions from business-as-usual levels by 20.375% according to the APCD's quantification system, and by 26.225% according to CAPCOA's quantification system. Under both systems, the GHG reduction percentage would exceed the local portion of the City's interim target (6.6%).

However, these are raw percentages, which do not take into consideration the GHG sources and their proportionate contributions to total GHG emissions. As shown in Table 2-1 in Chapter 2.0, transportation sources accounted for approximately 64% of all GHG emissions in the City of Stockton in 2005. Commercial/industrial sources and residential sources accounted for smaller shares. Because transportation sources account for a larger share of GHG emissions, GHG reduction measures (typically assigned a percent reduction value) related to transportation would reduce overall GHG emissions by a greater amount, other things being equal. By contrast, reduction measures applicable to commercial/industrial or residential sources would account for a smaller overall GHG emission reduction, due to the smaller shares these sources contribute to overall GHG emissions.

To provide a more accurate estimate of GHG reduction value, the GHG emission reduction measures were weighted according to the emission source – mainly transportation, commercial and residential. The sources were identified in Tables 4-4 through 4-7 in Chapter 4.0. The weighting applied was based on each sector's contribution to total City of Stockton GHG emissions, as determined by the City's preliminary emissions inventory for 2020. As with 2005, transportation sources are responsible for most of the GHG emissions in 2020. Since some measures apply to both commercial and residential land uses, these sectors were combined. The results of this weighting are shown in Table 5-1 below.

TABLE 5-1
WEIGHTED GHG EMISSION REDUCTION MEASURE VALUES
FOR BEAR CREEK EAST SPECIFIC PLAN

	Reduction Values	
	APCD	**CAPCOA**
Unweighted Reduction Values		
Transportation	9.375	12.625
Commercial/Residential	11.000	13.600
Total Unweighted Values	**20.375**	**26.225**
Weighted Reduction Values		
Transportation (64.1%)	6.009	8.093
Commercial/Residential (33.0%)	3.630	4.488
Total Weighted Values	**9.639**	**12.581**

Notes: Refer to Table 9.5-1 for source of information regarding proportionate sector shares of GHG emissions in 2020. Refer to Tables 9.5-4 and 9.5-5 for classification of measures by sector.

Sources: CAPCOA (2008); SJVAPCD (2009)

As shown in Table 5-1, when weighting is applied, the various incorporated or proposed features of the BCESP for which reduction values have been assigned would reduce GHG emissions from business-as-usual levels by approximately 9.6% according to the APCD's quantification system, and by approximately 12.6% according to CAPCOA's quantification system. Under both systems with weighting, the GHG reduction percentage still would exceed the 6.6% local portion of the City's interim target.

In summary, application of the BCESP's proposed design features and GHG reduction measures would exceed the local share of the City of Stockton's interim GHG reduction target. Therefore, the project would be considered to have a less than significant impact on global climate change from a CEQA perspective, and would be consistent with applicable state and local GHG reduction plans, based on the quantification systems described herein.

5.2 FUTURE CONSISTENCY WITH OTHER GHG REDUCTION PLANS AND MEASURES

This GGRPA evaluated the ability of the BCESP to meet the applicable GHG reduction standards. This evaluation was based on measures currently available at this time and identified as feasible. As more attention is devoted to GHG reduction, new technologies and design and construction methods will likely develop that may be more feasible and more effective than the measures now incorporated in the BCESP. It is not the intention of the BCESP to foreclose the use of these new technologies and methods should they become available. Therefore, the BCESP may be amended to substitute new measures in place of those currently incorporated, provided that the new measures demonstrate that 1) they are GHG-reducing measures, and 2) the percentage of reduction can be quantified.

Climate Change Scoping Plan

As previously noted, the proposed BCESP GHG reduction measures are sufficient to reach the local share of the City of Stockton's interim GHG reduction target of 28.7%. The local share emission reduction target is based on additional reductions in potential 2020 GHG emissions that would accrue from the State of California's efforts to implement the Scoping Plan. The Scoping Plan includes a range of GHG reduction measures that would apply to existing and new industrial, energy, commercial and residential development in the state as a whole, and to on- and off-road travel associated with those uses.

A few of the Scoping Plan's GHG reduction measures overlap or are redundant with GHG reduction measures included in the BCESP. The BCESP's potentially redundant measures would include "smart growth" elements of the project that would tend to implement the Regional Transportation-Related GHG Targets recommended measure in the Scoping Plan. This measure, which is linked to implementation of SB 375, is expected to result in a statewide GHG reduction of 5 MMT CO2e, or about 0.8% of the predicted business as usual GHG emissions for the state as a whole, and about 3% of the 28.4% of GHG emissions reductions needed statewide to reach the 2020 GHG reduction goal.

The remaining 97% of the quantified GHG reduction measures identified in the Scoping Plan would produce results in parallel with and independent of the BCESP, adding to the potential GHG emission reductions that are identified in this GGRPA. These measures include GHG emission reductions to be achieved by a proposed cap-and-trade system and complementary measures listed in the Scoping Plan, the complete contents of which are shown in Table 3-1 of this document. GHG reductions associated with the cap-and-trade system and complementary measures include:

- Greenhouse gas standards for new cars and light trucks and other vehicle efficiency measures
- Aerodynamic and hybridization programs for medium and heavy trucks
- Low-carbon fuel requirements
- In-port ship electrification and other goods movement efficiency
- Energy generation efficiency, including combined heat and power generation, solar water heating; expanded solar photovoltaic; increased renewable energy portfolio requirements on utilities
- New building and appliance efficiency programs, outside of the state's green building strategies, discussed below
- New requirements on industrial and refinery operations

These measures together would generate approximately 146.7 MMT CO2e in GHG reductions, or approximately 84% of the reduction to be achieved by 2020. An additional 27.3 MMT CO2e, or approximately 16% of the 2020 GHG reduction, would be achieved

by reducing emissions of gases with high global warming potential, sustainable forest practices, other industrial measures, and improvements in landfill methane capture (see Table 3-1 of this document).

The above-described Scoping Plan GHG emission reductions are projected to generate all of the GHG emission reductions needed statewide by 2020, even subtracting the SB 375 measures. Altogether, the Scoping Plan's quantified GHG reduction measures are predicted to result in 169 MMT CO2e of GHG emission reductions, which is 28.4% of the predicted 2020 GHG emissions and 100% of the statewide reduction sought by the Scoping Plan.

In addition to these measures, the Scoping Plan also identified six other recommended measures that may generate an additional 43 MMT CO2e or more GHG emission reductions. The largest contributor to these, identified as "Green Buildings," would contribute 26 MMT CO2e, an additional 4% reduction in predicted 2020 GHG emissions. The project would contribute to this reduction by requiring the incorporation of the City's green building requirements, including compliance with CALGREEN. Outside this contribution, other GHG reduction measures would result in an additional 2.9% reduction in predicted 2020 GHG emissions statewide.

In summary, the California Climate Change Scoping Plan is predicted to result in a total of 31.2% reduction in predicted 2020 business as usual greenhouse gas reductions. This would consist of contributions of 169 MMT CO2e (28.35%) from the Plan's Recommended Reduction Measures (excluding the Regional Transportation-Related GHG Targets) and 17 MMT CO2E (2.9%) from Other Recommended Measures. These reductions would occur independent of the GHG reduction measures included in the BCESP.

City of Stockton Climate Action Plan

As noted elsewhere in this GGRPA, the City of Stockton is in the process of preparing a CAP. At this time, the transit gap study has been completed, as has a preliminary GHG inventory. No draft CAP has yet been prepared.

It is possible that the CAP, when adopted, may set more stringent GHG reduction goals than those set by the interim target, which is 28.7%. It is also possible that the CAP may contain requirements currently unaddressed in the BCESP, or that are more stringent than BCESP measures. Given the number of GHG reduction measures that would be part of the BCESP, it is expected that development in the BCESP area would meet the GHG emission reduction target set by the CAP, if the CAP does not substantially differ from the current interim target. However, should the CAP reduction target exceed the current interim target, the BCESP will need to be reviewed and additional GHG reduction measures may need to be adopted if necessary to achieve the adopted CAP target. In addition, the BCESP may need to be amended to incorporate any requirements and measures mandated by the CAP once adopted by the City. In the event that a CAP measure and a BCESP measure conflict, the more stringent measure shall apply.

One issue that has been raised is the relative burden of GHG emission reductions between existing development and new development. It is possible that new development would bear more of the burden of reducing emissions than existing development, since new development could more readily incorporate emission reduction measures and could be made more consistent with future land use, transportation and other plans designed to reduce GHG emissions. Based on this assumption, future development would be required to reduce GHG emissions above the City's 6.6% local contribution.

At the moment, there is no indication of what the CAP will require of both new and existing development regarding GHG emission reductions. It is probable that some CAP measures would be targeted towards existing development – for example, more aggressive weather stripping and other home improvements that reduce energy consumption. The extent of such measures applicable to existing development is not known at this time. However, as previously noted, the BCESP may be amended to incorporate any requirements and measures mandated by the CAP. Should the CAP require greater emission reductions from the BCESP than currently required, it is expected that the BCESP would be amended as necessary to meet CAP requirements.

1.0 INTRODUCTION

Air Permitting Specialists (APS) has been retained by In-Site Environmental, Inc. to evaluate health risks associated with emissions from two rail lines located in Stockton, California. Specifically, this analysis focuses on the impacts of train emissions on two proposed housing development projects planned in the vicinity of the rail lines. The two development projects are:

- Bear Creek East Development Project
- Bear Creek West Development Project

The location of the proposed projects relative to the train tracks is shown in Figure 1. This study focuses on the following Union Pacific train track segments:

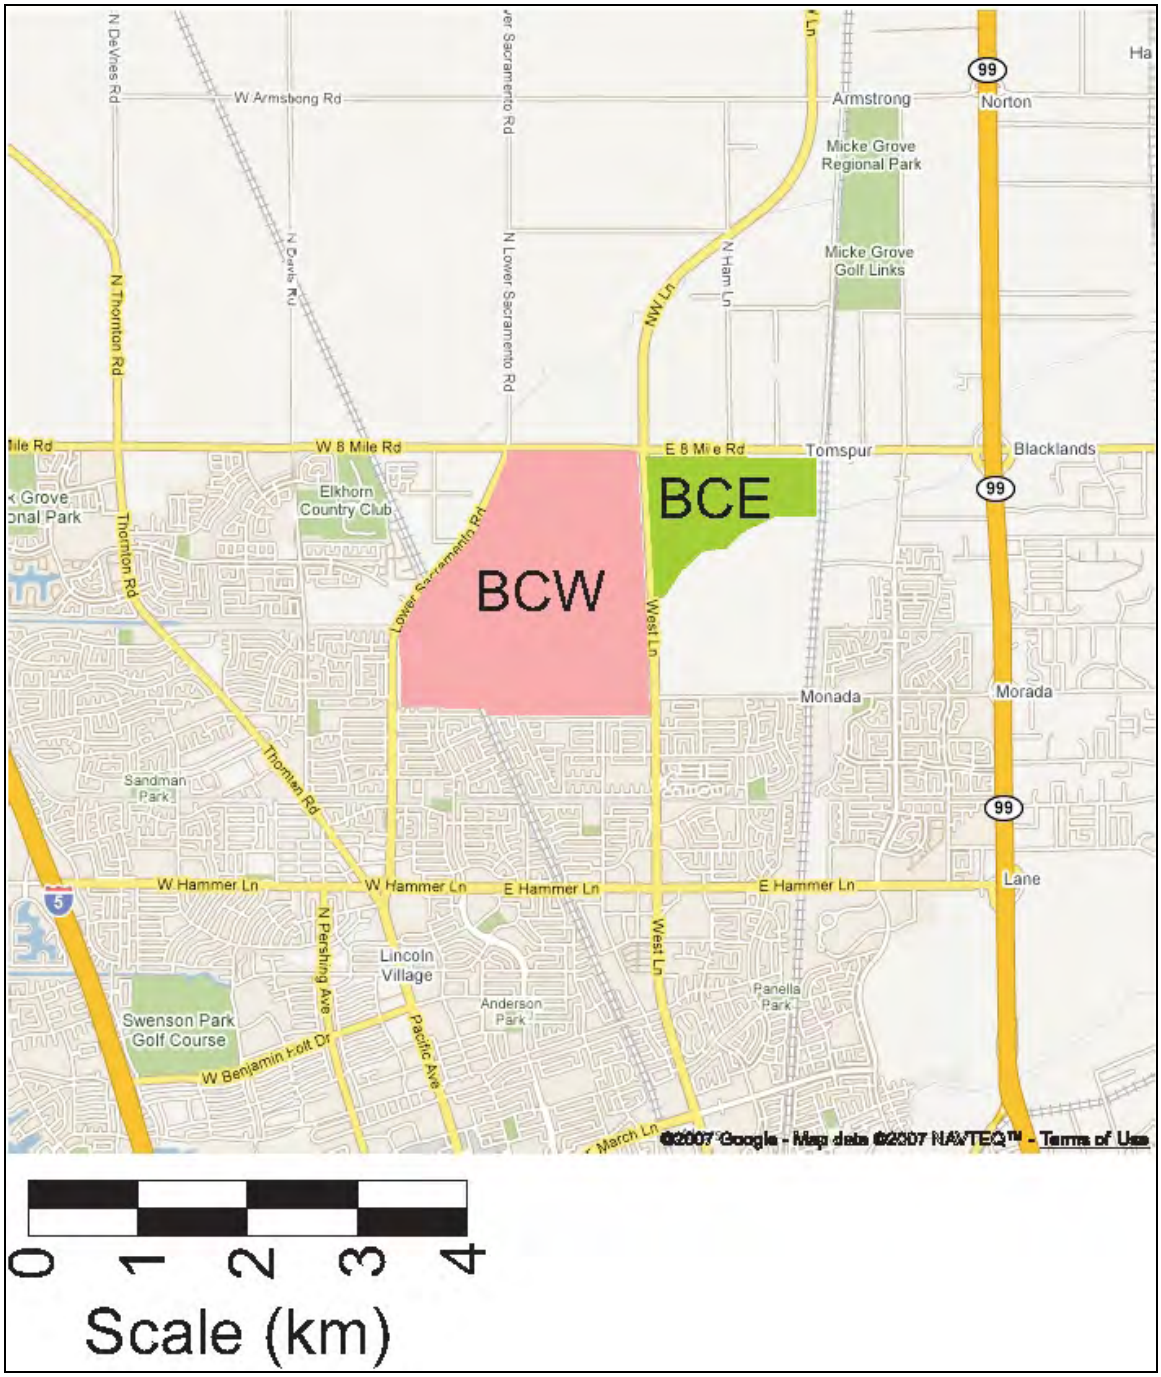
1. Western track between Marlette Road and Hammer Lane

2. Eastern track between Morse Road and Mosher Slough

Would locating the two housing development projects near the train tracks expose future residents to significant health risks? In the present study, health risk refers to cancer risk from exposure to diesel particulate matter (PM). A risk above 10 cancers per million is considered significant.

The risk calculation is based on lifetime exposure to diesel PM. Estimates of cancer risk require knowledge of exposure to diesel PM over a person's lifetime. Under Guidelines established by the California Office of Environmental Health Hazard Assessment (OEHHA), lifetime exposure is defined as exposure over 70 years.

To estimate risk, a three-step procedure was used:



1. Calculate the emission rates of diesel particulate from trains by estimating the annual train volume along each track and the emission rate from each diesel particulate matter (PM) locomotive;

2. Estimate the atmospheric dispersion pattern of diesel particulate in the vicinity of the train tracks;

3. Estimate health risks associated with exposure to diesel particulate. A health risk is considered significant if cancer risk exceeds 10 in a million.

This technical note consists of 4 main sections. Immediately follow this introduction, Section 2 describes the methodology for the estimate of annual diesel particulate emissions from the trains. Section 3 describes the procedure for estimating health risks associated with the diesel particulate emissions. The results of the risk analysis are presented in Section 4. Technical data and model output are provided in the appendix.

Figure 1
Location Map

[MSW1]

2.0 ESTIMATE OF EMISSIONS

Diesel PM is a component of the exhaust released from the train locomotives. The emission rate of diesel PM is related to annual train volume (trains/year), number of train locomotives per train and the size (horsepower) of each locomotive. These are discussed in the next two subsections.

2.1 Estimate of Annual Train Traffic

It is estimated that 28 trains per day will traverse each rail line for an annual estimate of 10,220 trains per year per track. Each train was assumed to be powered by 3 diesel locomotives. The estimated number of trains per day is based on the highest value reported among the measured passby event data documented in JC Brennan's noise studies for the Bear Creek East and West projects and the Federal Railroad Administration Office of Safety Analysis's Highway-Rail Crossing Inventory File record for a crossing near the applicable segment of the eastern track. The locomotive per train estimate is based on through-train operational data published in Sierra Research's Toxic Air Contaminant Emissions Inventory and Air Dispersion Modeling Report for the Stockton Rail Yard, Stockton, CA (January 2007).

2.2 Estimates of Emissions

As noted earlier, each train is assumed to be powered by 3 diesel locomotives. Each locomotive is assumed to be similar to the General Motors Model GP-50, equipped with a 3,866 hp engine operating at notch setting No. 4. Emissions data were taken from the Union Pacific's Roseville Rail Yard Study, Appendix B, Table B-1. A copy of this Table is provided in the Appendix.

This emissions data, however, represents current emissions and does not take into account expected decline in emissions per locomotive due to proposed federal regulations. These regulations would limit emissions from diesel locomotives by 95+ percent over current emissions. In the current analysis, we assumed that there would be a 90% reduction in diesel emissions as compared to current emissions.

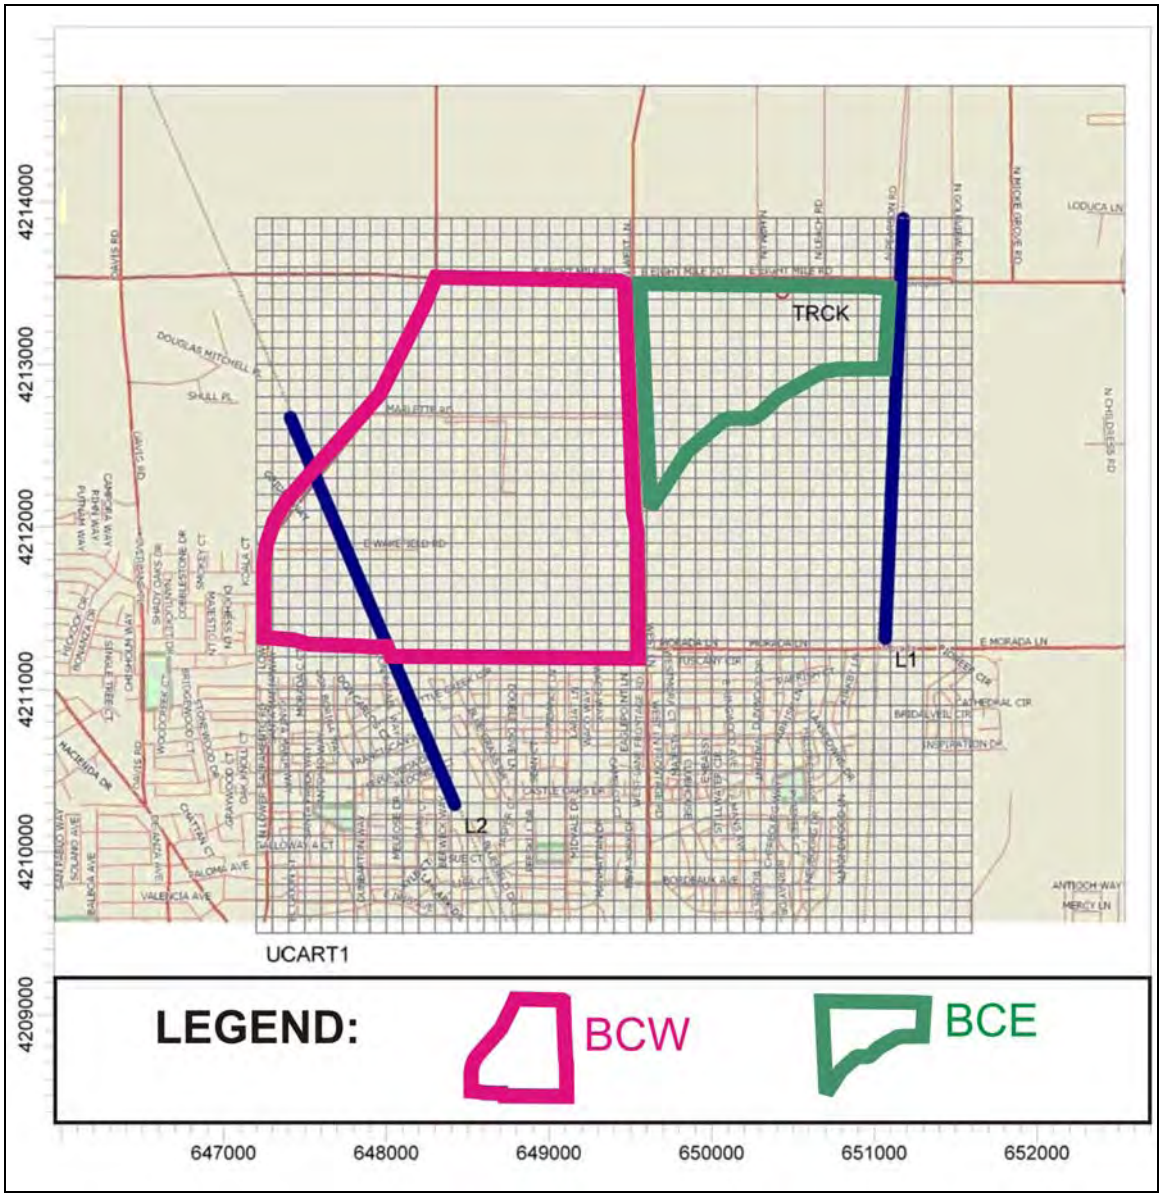
Annual emissions are estimated to be 225 and 307 lbs/year for the Western and Eastern tracks respectively. Emissions from the Eastern tracks are higher since this segment is slightly longer (2.2 vs 1.6 miles). Detailed calculations are shown in Tables 1 to 4.

3.0 EXPOSURE ASSESSMENT

Cancer risk is related to the exposure concentration, for example in grams/cubic meter, of diesel PM. Exposure can occur via inhalation, ingestion and dermal pathways. For this study, we limit our analysis to the inhalation pathway.

The ambient air concentration of diesel PM at a given location depends on its distance from the rail lines, the emission rate of diesel PM and the local wind pattern. An air dispersion model that incorporates these variables and parameters was used to calculate the concentration of diesel PM in the vicinity of the train tracks.

The EPA model, known as the Industrial Source Complex Model (ISCST3 Version 02035), was used to estimate the concentration of diesel PM. Train emissions were modeled as two line sources. The ISCST3 model simulates the emissions from each line source as a series of elevated volume sources. The release height of each volume source was estimated to be 10 meters (32.8 ft).



Concentrations were calculated every 100 meters in rectangular grid extending 4,500 meters in each direction. A total of 2,025 receptors were used. The modeling grid is shown in Figure 2.

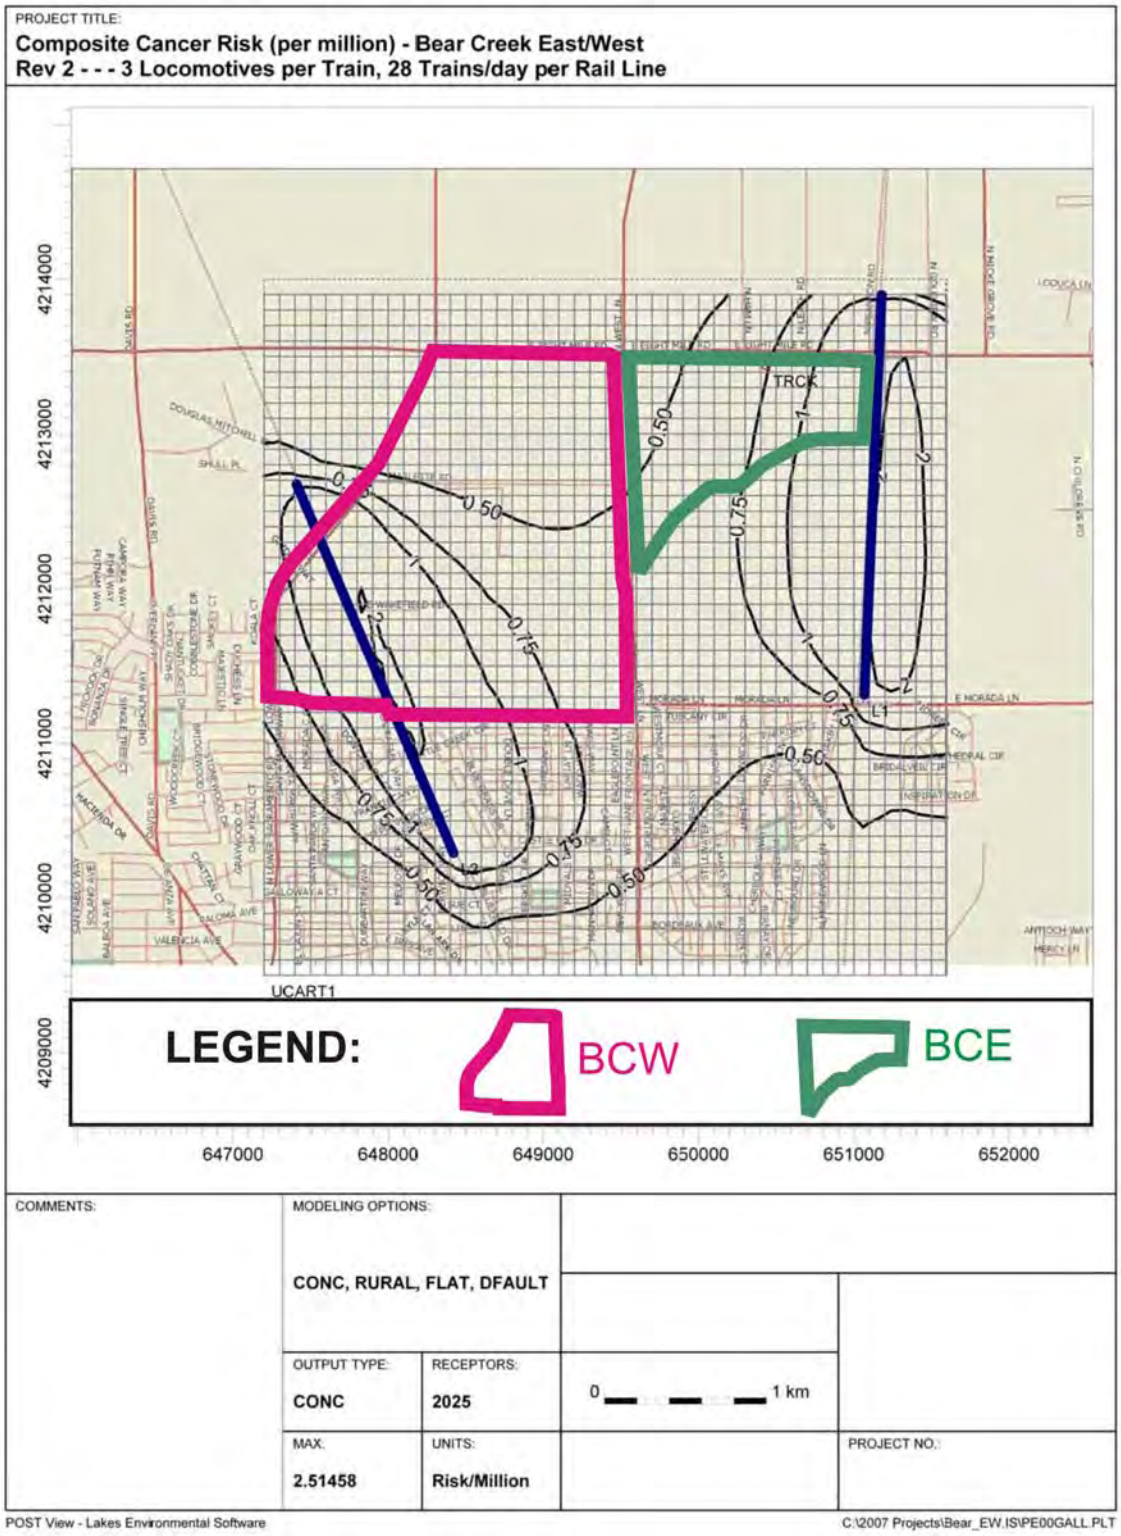
Other inputs used to model the diesel PM are as follows:

Dispersion Model	ISCST3 Version 02035
Emission Source	Elevated Line Source
Release Height	10 meter
Rural/Urban Mode	Rural
Grid Resolution	100 meters (328 feet)
Grid Extent	4.5 km x 4.5 km (2.8 miles x 2.8 miles)
Number of Receptors	2,025
Regulatory Option	This option was used
Meteorological Data	1 year of hourly 1976 from Stockton Total of 8,760 hours modeled
Averaging Time	Annual

The model was run using hourly wind data for 1 year and the highest annual concentration was calculated at each of the 2,025 receptors. These concentrations were used to calculate cancer risk. This is discussed in the next section.

Figure 2
Layout of Modeling Grid
Showing Location of Individual Trucks
(Coordinates are in UTMs)

4.0 RISK CHARACTERIZATION



Risk characterization refers to the process of quantifying the risk associated with a given exposure to a toxic air pollutant. In the present study, we have focused on the inhalation pathway as the primary route of exposure. Therefore, risk characterization involves using the atmospheric concentration of diesel PM with toxicity data (diesel PM unit risk factor) to establish 70 year risk. The recommended unit risk factor (by CARB) is 3.0×10^{-04}. For example, if the concentration of diesel PM at a given receptor is 0.5 micrograms per cubic meter, then the 70 year cancer risk associated with this concentration is:

70 Year Risk = 0.5 micrograms/cubic meter x 3.0×10^{-4} (micrograms/cubic meter)$^{-1}$

= 0.15×10^{-4} cancers or 15 cancers per million.

The results of calculating the risk are shown in Figure 3. The numbers on the contours indicate cancer risk per million. The innermost contour represents 2 cancers/million (red color). The results show that risk would not exceed 10 cancers/million for any locations within the Bear Creek Development projects.

Figure 3
Spatial Variation of Cancer Risk *(per million)*

5.0 CONCLUSIONS

Maximum lifetime cancer risk associated with train traffic along two rail lines was estimated. On the basis of diesel emissions and local dispersion patterns, the maximum cancer risk associated the train operations is estimated to be between 2 and 3 cancers per million. The maximum risk occurs 200 meters East of the Eastern train tracks. Risk to future residents of the Bear Creek East and Bear Creek West developments would not be significant.

Overall Train Emissions Per Track	4.42E-03	*grams/sec (Input to ISC - Results in ug/cu m)*	
Diesel Risk Factor	3.00E-04		
Emission Rate	1.33E-06	*g/sec*	*Input to ISC - Results in 70 Year Risk*
	1.33E+00	*g/sec*	*Input to ISC - Results in 70 Year Risk/million*
Exposure Adjustment	1.0000		
Expected Diesel PM Emission Reduction in Future	90%		*Over 70 years*
Annual Average Emission Rate per Train	1.33E-01	*g/sec*	Input to ISC - Results in 70 Year Risk/million

File:Bear_Creek_East
Sheet:Risk East

(7) Includes B23-7, C30-7, C36-7, B30-7, B36-7, U36B

CONC RURAL FLAT DFAULT

*** MODEL SETUP OPTIONS SUMMARY ***

- -

**Intermediate Terrain Processing is Selected
 **Model Is Setup For Calculation of Average CONCentration Values.

  -- SCAVENGING/DEPOSITION LOGIC --
**Model Uses NO DRY DEPLETION. DDPLETE = F
**Model Uses NO WET DEPLETION. WDPLETE = F
**NO WET SCAVENGING Data Provided.
**NO GAS DRY DEPOSITION Data Provided.
**Model Does NOT Use GRIDDED TERRAIN Data for Depletion Calculations
 **Model Uses RURAL Dispersion.

**Model Uses Regulatory DEFAULT Options:
          1. Final Plume Rise.
          2. Stack-tip Downwash.
          3. Buoyancy-induced Dispersion.
          4. Use Calms Processing Routine.
          5. Not Use Missing Data Processing Routine.
          6. Default Wind Profile Exponents.
          7. Default Vertical Potential Temperature Gradients.
          8. "Upper Bound" Values for Supersquat Buildings.
          9. No Exponential Decay for RURAL Mode

**Model Assumes Receptors on FLAT Terrain.
 **Model Assumes No FLAGPOLE Receptor Heights.
 **Model Calculates PERIOD Averages Only
 **This Run Includes: 521 Sources);   1 Source Group(s); and   2025 Receptor(s)
 **The Model Assumes A Pollutant Type of: DIESELPM
 **Model Set To Continue RUNning After the Setup Testing.
 **Output Options Selected:
        Model Outputs Tables of PERIOD Averages by Receptor
        Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)

**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
                                                                m for Missing Hours
                                                                b for Both Calm and Missing Hours

**Misc. Inputs: Anem. Hgt. (m) =   10.00 ;   Decay Coef. =   0.000   ;   Rot. Angle =   0.0
                 Emission Units = GRAMS/SEC   ; Emission Rate Unit Factor =   0.10000E+07
                 Output Units   = MICROGRAMS/M**3

**Approximate Storage Requirements of Model =   1.7 MB of RAM.

**Input Runstream File: Bear_EW.INP
**Output Print File: Bear_EW.OUT

1.0 INTRODUCTION

Air Permitting Specialists (APS) has been retained by InSite Environmental, Inc. to evaluate health risks associated with the operation of several trucking yards near the proposed Bear Creek East Development Project, in Stockton, California. The scope of the evaluation was limited to cancer health risks associated with emissions of diesel particulate from trucks at two trucking yards.

The proposed Bear Creek East Development project would be located southeast or the intersection of West Lane and Eight Mile Road in Stockton. There are two existing truck yards in the vicinity of the proposed development. See Figure 1 for the location of the trucking facilities.

The two trucking operations are:

- Hammer Trucking located on West Lane north of Eight Mile Road
- SBC/Freitas Trucking Yard located on Eight Mile Road East of West Lane

Would tuck exhaust emissions pose a health risk to residents at the proposed Bear Creek East Development?

To answer this question, the emission rates of truck exhaust emissions were calculated and an air dispersion model was employed to translate the emission rate of diesel exhaust particulate (in grams/second) into the concentrations (grams per cubic meter). Cancer health risk associated with exposure to diesel particulate matter (diesel PM) were calculated by use of a toxicity risk factor recommended by the California Air Resources Board (CARB).

This technical note consists of 4 main sections. Immediately follow this introduction, Section 2 describes the methodology for the estimate of annual diesel particulate emissions from the trucking facility. Section 3 describes the procedure for estimating health risks associated with the emissions. The results of the risk analysis is presented in Section 4. The report concludes (Section 4) with a discussion of the findings and implication for development in the vicinity of the trucking yards. Technical data and model output are provided in the appendix.

Figure 1
Location Map

2.0 ESTIMATE OF DIESEL PM EMISSIONS

Diesel PM is a component of the exhaust released from the trucks. On the basis of data presented in the noise study, 5 to 6 trucks enter Hammer Trucking yard daily. Similarly, 45 trucks enter and exit Freitas Trucking yard daily. A single truck would release diesel PM only for a few minutes while entering or exiting the yard. For example, if we assume each truck idles for 10 minutes, then a total of 50 to 60 minutes of truck idling emissions would be released from the Hammer Trucking yard and 450 minutes of truck idling emissions would be released from Freitas trucking yard.

2.1 Current Truck Emissions

For the purposes of this study, it was assumed that there would be four idling trucks at the SBC/Freitas trucking and two idling trucks at the Hammer trucking yard. Each truck would idle 8 hours per day, 365 days per year. This is equivalent to 960 minutes of truck idling at the Hammer Trucking Yard and 1,920 minutes of idling at the Freitas Trucking yard. These estimates of truck idling are a conservative (overstatement) estimate of emissions from truck idling. This is because current regulations enacted by CARB limit truck idling to no more that 5 minutes after a truck reaches its destination. As a result, the risk estimates presented in this report should be viewed as an upper limit of future risk. Actual risk are expected to be much lower.

The hourly emission rate from each truck idling truck was determined using the EMFAC4G emissions model for 2000 to 2005 average truck fleet mix in San Joaquin Valley Unified APCD. The results of EMFAC model indicate that each truck would emit 0.90 grams per hour of diesel PM. See copy of the EMFAC model output provided in the Appendix. This level of emissions is for the current (2000 to 2005) fleet mix.

2.2 Future Truck Emissions

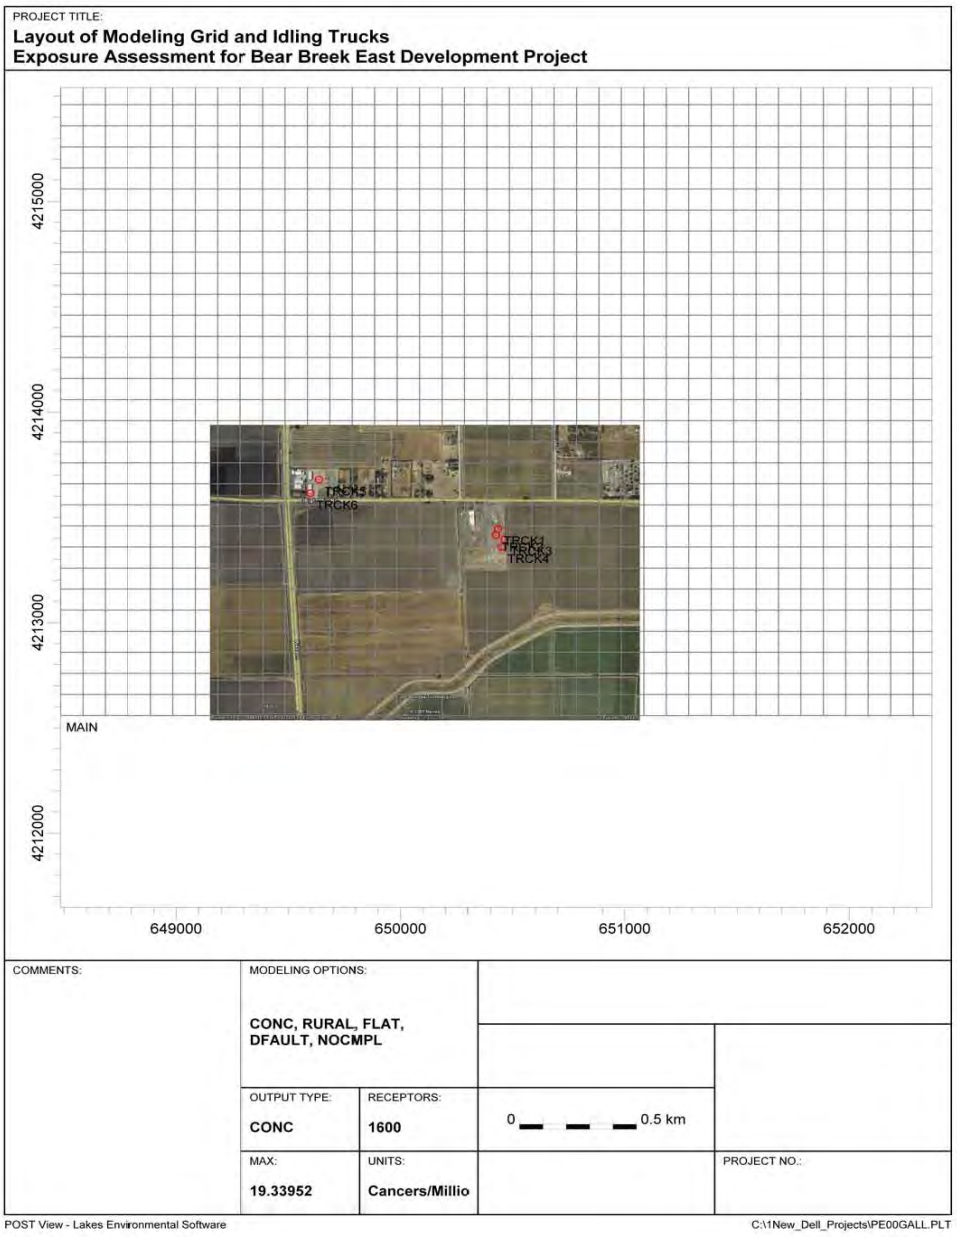
The risk calculation is based on lifetime exposure to diesel PM. Estimates of cancer risk require knowledge of exposure to diesel PM over a person's lifetime. Under Guidelines established by the California Office of Environmental Health Hazard Assessment (OEHHA), lifetime exposure is defined as exposure over 70 years.

For the present study, it was assumed that the trucking operations would continue for the next 30 years, not 70 years. In addition, both the environmental protection agency (EPA) and CARB are promulgating new requirements will stipulate that emissions from diesel locomotive be reduced by 80% over the next 20 years (by 2026). Further declines are expected beyond 20 years. This means that the emission rates that are calculated using the EMFAC emissions model (0.90 grams/hour) would have to be adjusted to reflect average truck emissions over the next 30 years (2007 to 2037). For this study, however, we assumed that truck idling emissions over the next 30 years would be at the current rate.

3.0 EXPOSURE ASSESSMENT

Cancer risk is related to the exposure concentration, for example in grams/cubic meter, of diesel PM. Exposure can occur via inhalation, ingestion and dermal pathways. For this study, we limit our analysis to the inhalation pathway.

The ambient air concentration of diesel PM at a given location depends on its distance from the truck yards, the emission rate of diesel PM and the local wind pattern. An air dispersion model that incorporates these variables and parameters was used to calculate the concentration of diesel PM in the vicinity of the truck yards.



The EPA model, known as the Industrial Source Complex Model , was used to estimate the concentration of diesel PM. Trucks were modeled as individual stationary sources. Emission are assumed to be discharged from a 6 inch exhaust pipe 15 feet above ground. Concentrations were estimated every 100 meters in rectangular grid extending 1,000 meters in each direction. A total of 400 receptors were used. The modeling grid is shown in Figure 2 (next page).

Specific model inputs used to model the diesel PM are as follows:

Model	ISCST3 Version 02035
Emission Source	Stationary Point Source
Release Height	15 feet
Exhaust Flow	5.7 cubic meters/min
Exhaust Temperature	350 F
Rural/Urban Mode	Rural
Grid Resolution	100 meters (328 feet)
Grid Extent	2.0 km x 2.0 km (1.2 miles x 1.2 miles)
Number of Receptors	400
Regulatory Option	Option Used
Meteorological Data	1 year of hourly 1976 from Stockton Total of 8,760 hours modeled
Averaging Time	Annual

The model was run using hourly wind data for 1 year and the highest annual concentration was calculated at each of the 400 receptors. These concentrations were used to calculate cancer risk. This is discussed in the next section.

Figure 2
Layout of Modeling Grid
Showing Location of Individual Trucks
(Coordinates are in UTMs)

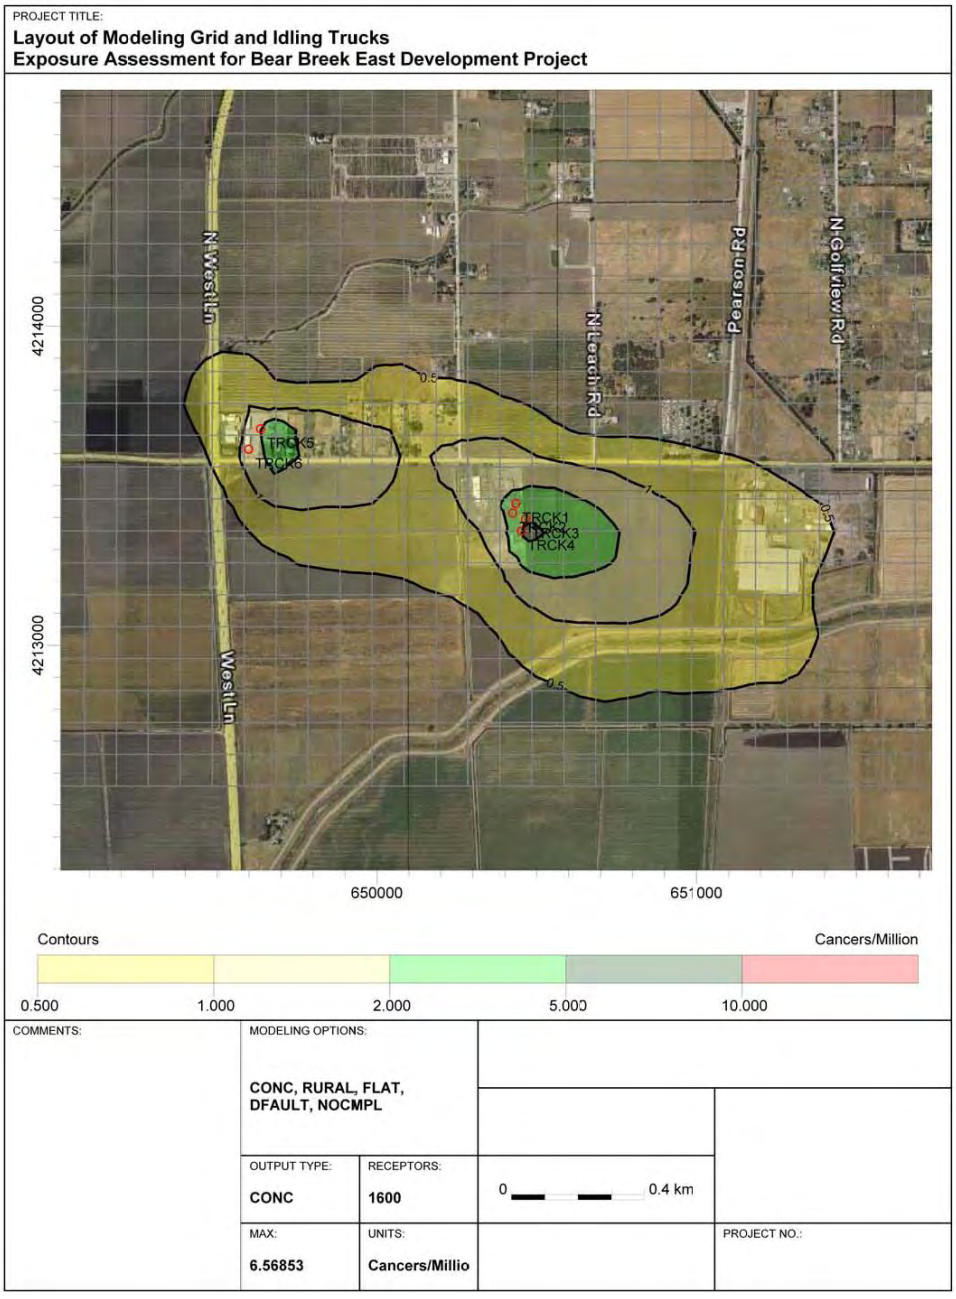
4.0 RISK CHARACTERIZATION

Risk characterization refers to the process of quantifying the risk associated with a given exposure to a toxic air pollutant. In the present study, we have focused on the inhalation pathway as the primary route of exposure. Therefore, risk characterization involves using the atmospheric concentration of diesel PM with toxicity data (diesel PM unit risk factor) to establish 70 year risk. The recommended unit risk factor (by CARB) is 3.0×10^{-04}. For example, if the concentration of diesel PM at a given receptor is 0.5 micrograms per cubic meter, then the 70 year cancer risk associated with this concentration is:

Risk (70 year) = 0.5 micrograms/cubic meter x 3.0×10^{-4} (micrograms/cubic meter)$^{-1}$

= 0.15×10^{-4} cancers or 15 cancers per million.

If the duration of exposure is reduced, say from 70 years to 30 years, then the cancer risk is reduced by a factor of 30/70 = 0.429.



The results of calculating the risk are shown in Figure 3. The numbers on the contours indicate cancer risk per million. The innermost contour represents 2 cancers/million (red color). The results show that risk would not exceed 10 cancers/million for any locations outside the truck yards.

These results should be interpreted within the context of the assumptions noted in Section 3. Specifically,

- Continuous exposure over 30 years;
- No reduction in diesel PM emissions over 30 years;
- 8 hours/day truck idling per truck

In reality, these assumptions are very conservative because of current limits on truck idling. In addition, future diesel PM emissions would be decline by 85% in the next few years. Finally, it is very unlikely that the truck yards will remain in operation for the next 30 years. Judging by current patterns in land use, industrial facilities are relocation to other (non-residential) areas. As a result of these assumptions, actual cancer risk is expected to be well below 1 cancers/million over the next 30 years.

Figure 3
Spatial Variation of Cancer Risk *(per million)*

5.0 CONCLUSIONS

Maximum lifetime cancer risk associated with the operation of two trucking years near the proposed Bear Creek East Development project were calculated. It is estimated that the operation of the two trucking yards would not lead to any significant health risks at the proposed development.

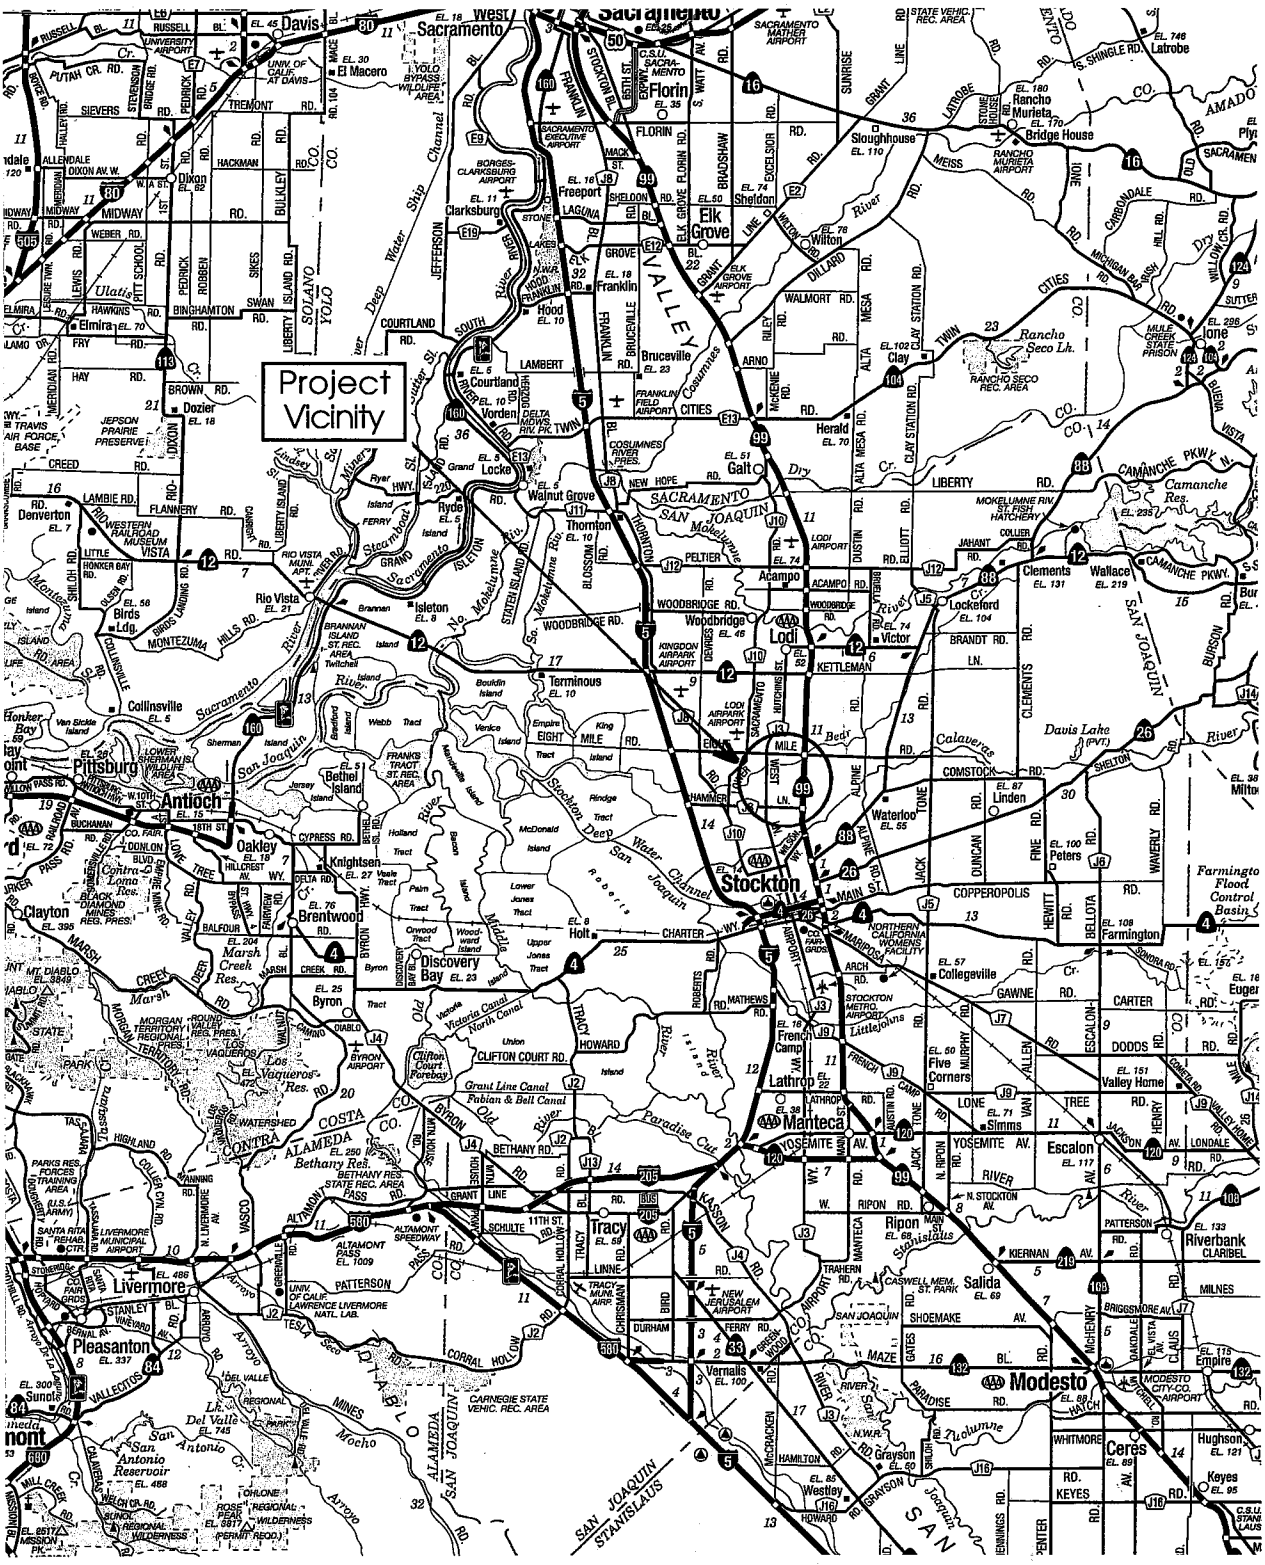
Biological Resources Assessment

MOORE BIOLOGICAL CONSULTANTS

May 18, 2010

Mr. Charlie Simpson
Insite Environmental
6653 Embarcadero Drive, Suite Q
Stockton, CA 95219

Subject: BASELINE BIOLOGICAL RESOURCES ASSESSMENT AT THE BEAR CREEK EAST PROJECT SITE, STOCKTON, CALIFORNIA



Dear Charlie:

Thank you for asking Moore Biological Consultants to conduct a baseline biological resources assessment for the Bear Creek East project (Figures 1 and 2). The focus of our work was to document existing biological resources in the site, conduct a survey to determine presence or absence of waters of the U.S. and wetlands, and search for suitable habitat for or presence of special-status species in the site. This letter report details the methodology and results of our investigation.

Methods

Prior to the field surveys, we conducted a search of California Department of Fish and Game's (CDFG) California Natural Diversity Database (CNDDB, 2004; 2006); a final search was undertaken in April 2010 (CNDDB, 2010). This information was used to identify wildlife and plant species that have been previously documented in the project vicinity or have the potential to occur based on suitable habitat and geographical distribution. The CNDDB search was conducted on the USGS 7.5-minute Lodi South topographic quadrangle, which is an area encompassing approximately 70 square miles surrounding the site.

FIGURE 2
PROJECT LOCATION

Field surveys were conducted on March 25, 2005, May 17 and August 11, 2006, and May 17, 2010. The surveys consisted of driving and walking around the site, making observations and noting habitat conditions, surrounding land uses, and plant and wildlife species. We conducted a search for special-status species, and suitable habitat for special-status species (e.g., elderberry shrubs, vernal pools). Additionally, trees at and near the site was assessed for the potential use by nesting raptors, especially Swainson's hawk (*Buteo swainsoni*), and burrows in the area were inspected burrowing owls (*Athene cunicularia*) or evidence of past occupancy.

Waters of the U.S., including wetlands in the project site were delineated on May 17 and August 11, 2006 (Moore Biological Consultants. 2006). The wetland delineation was conducted in accordance with the 1987 U.S. Army Corps of Engineers Wetland Delineation Manual and Regional Supplement (ACOE, 1987, 2008) and has been submitted to ACOE for verification.

Results

GENERAL SETTING: The project site is located north of Stockton, California (Figures 1). The site is within Section 2, Township 2 North, Range 6 East of the USGS 7.5-minute Lodi South topographic quadrangle (Figure 2). The site is generally flat from past land leveling, with site elevations ranging from 25 to 30 feet above mean sea level. The site primarily consists of annual cropland and alfalfa (see attached aerial and ground-level photographs).

Surrounding land uses in this rapidly urbanizing portion of San Joaquin County are primarily agricultural. Agricultural fields are located to the west across West Lane, to the south across Bear Creek, and to the east across the railroad tracks. There is also an abandoned cannery located to the east of the site. Areas to the north of the site across Eight Mile Road are primarily residential ranchettes; there is also a campground located to the north of the site. There is an in-holding

within the north-central portion of the site occupied by the SBC phone company and a trucking facility.

The project site primarily consists of fields that have been leveled and farmed in both annual and perennial crops in the past. The east part of the site is currently planted in corn and there is an alfalfa field in the southwest part of the site (see attached photographs).

VEGETATION: The field in the northwest part of the site is currently fallow. Vegetation in this field and other patches of grassland on the edges of the fields are vegetated with various native and non-native annual grass and weed species Grasses including oats (*Avena* sp.), soft chess brome (*Bromus hordeaceus*), ripgut brome (*B. diandrus*), foxtail barley (*Hordeum murinum*), Bermuda grass (*Cynodon dactylon*), and perennial ryegrass (*Lolium perenne*) are dominant grass species on-site. Other grassland species such as fiddleneck (*Amsinckia menziesii*), black mustard (*Brassica nigra*), bull thistle (*Cirsium vulgare*), prickly lettuce (*Lactuca serriola*), pigweed (*Amaranthus albus*), dove weed (*Eremocarpus setigerus*), common mallow (*Malva neglecta*), and filaree (*Erodium botrys*) are intermixed with the grasses. Table 1 is a list of plant species observed in the site.

Vegetation along the fringes of Bear Creek consists of emergent wetland species including tule (*Scirpus acutus*), water primrose (*Ludwigia peploides*), cattail (*Typha* sp.), Mediterranean barley (*Hordeum marinum*), umbrella sedge (*Cyperus eragrostis*) and California wild rose (*Rosa californica*).

Trees and shrubs within the project site consist primarily of ornamentals located near a home site that was in the southwestern portion of the site. Trees include cedar (*Cedrus deodara*), pine (*Pinus* sp.), buckeye (*Aesculus californicus*), and tree-of-heaven (*Ailanthus altissima*). No blue elderberry (*Sambucus* sp.) shrubs were observed within or adjacent to the project site.

TABLE 1
PLANT SPECIES OBSERVED IN THE SITE

Acer negundo	box elder
Ailanthus altissima	tree-of-heaven
Aira caryophyllea	European hairgrass
Amaranthus albus	pigweed
Amsinckia intermedia	fiddleneck
Avena sp.	oat
Brassica nigra	black mustard
Brassica rapa	field mustard
Briza minor	quaking grass
Bromus diandrus	ripgut brome
Bromus hordeaceus	soft chess brome
Capsella bursa pastoris	shepherds purse
Carduus pycnocephalus	Italian thistle
Centaurea solstitialis	yellow star-thistle
Convolvulus arvenis	morning glory
Conyza canadensis	horseweed
Cirsium vulgare	bull thistle
Cynodon dactylon	Bermuda grass
Cyperus eragrostis	umbrella sedge
Dactylis glomerata	orchard grass
Daucus carota	wild carrot
Eleocharis macrostachya	creeping spikerush
Epilobium angustifolium	fireweed
Epilobium brachycarpum	willow weed
Eremocarpus setigerus	doveweed
Erodium botrys	filaree
Erodium cicutarium	red-stem filaree
Ficus carica	edible fig
Foeniculum vulgare	sweet fennel
Gallium sp.	bedstraw
Geranium spp.	geranium
Hordeum marinum	Mediterranean barley
Hordeum murinum	foxtail barley

TABLE 1 (continued)
PLANT SPECIES OBSERVED IN THE SITE

Hypochaeris glabra	smooth cat's ear
Juglans californicus	black walnut
Juncus sp.	rush
Lactuca serriola	prickly lettuce
Lolium perenne	perennial ryegrass
Ludwigia peploides	water primrose
Lupinus sp.	lupine
Malva neglecta	common mallow
Paspalum dilatatum	dallis grass
Picris echioides	bristly ox-tongue
Pinus sp.	pine
Quercus lobata	valley oak
Quercus suber	cork oak
Raphanus sativus	wild radish
Robinia pseudoacacia	black locust
Rosa californica	California wild rose
Rubus discolor	Himalayan blackberry
Rumex crispus	curly dock
Salix sp.	willow
Salsola tragus	tumbleweed
Scirpus acutus	tule
Silybum marianum	milk thistle
Sonchus asper	prickly sow-thistle
Sonchus oleraceous	sow thistle
Sorghum halepense	Johnson grass
Tribulus terrestris	puncture vine
Typha sp.	cattail
Urtica urens	dwarf nettle
Verbena hastata	common verbena
Vicia sativa	common vetch
Vulpia myuros	rattail fescue
Xanthium strumarium	cocklebur

There are three valley oak (*Quercus lobata*) trees located in the south portion of the site near the toe of the landward side of the Bear Creek levee. At least one of these oaks appears to be large enough to fall into San Joaquin County's classification of "Heritage Oaks" (i.e., trunk diameter of 32 inches or greater measured 4.5 feet above ground level).

WILDLIFE: A limited number of wildlife species were observed in the site. Some of the more common birds observed include red-tailed hawk (*Buteo jamaicensis*), yellow-billed magpie (*Pica nuttalli*), northern mockingbird (*Mimus polyglottos*), mourning dove (*Zenaida macroura*), American crow (*Corvus brachyrhynchos*), northern mockingbird (*Mimus polyglottos*), yellow-billed magpie (*Pica nuttalli*), western scrub jay (*Aphelocoma coerulescens*), and red-winged blackbird (*Agelaius phoeniceus*). All of these are species commonly found in rural areas in the greater project vicinity (Table 2).

There are a few potential nest trees in the site that are suitable for nesting raptors and other protected migratory birds, including Swainson's hawk. Given the size of the site, the presence of nesting habitat (large trees), as well as the presence of foraging habitat (large open fields), it is considered likely one or more pairs of raptors, plus a variety of songbirds, nest in the site each year.

A limited variety of mammals common to agricultural and semi-rural areas occur in the project site. Desert cottontail (*Sylvilagus audubonii*), muskrat (*Ondatra zibethicus*), and ground squirrels (*Spermophilus beecheyi*) were the only mammals observed at the site. Coyote (*Canis latrans*), raccoon (*Procyon lotor*), striped skunk (*Mephitis mephitis*) and opossum (*Didelphis virginiana*) are expected to occur at the site. A number of species of small rodents including mice (*Mus musculus, Reithrodontomys megalotis,* and *Peromyscus maniculatus*) and voles (*Microtus californicus*) also likely occur.

Based on habitat types present, a limited variety of amphibians and reptiles are expected to use habitats in the site. Pacific chorus frog (*Pseudacris regilla*) was

TABLE 2

WILDLIFE SPECIES OBSERVED IN THE SITE

Birds	
Great blue heron	*Ardea herodias*
Great egret	*Casmerodius albus*
Mallard	*Anas platyrhynchos*
Turkey vulture	*Cathartes aura*
Swainson's hawk	*Buteo swainsoni*
Red-tailed hawk	*Buteo jamaicensis*
American kestrel	*Falco sparverius*
Killdeer	*Charadrius vociferus*
Rock dove	*Columba livia*
Mourning dove	*Zenaida macroura*
Barn swallow	*Hirundo rustica*
Western scrub jay	*Aphelocoma coerulescens*
Yellow-billed magpie	*Pica nuttalli*
American crow	*Corvus brachyrhynchos*
American robin	*Turdus migratorius*
Red-winged blackbird	*Agelaius phoeniceus*
Northern mockingbird	*Mimus polyglottos*
Song sparrow	*Melospiza melodia*
House finch	*Carpodacus mexicanus*
Mammals	
California ground squirrel	*Spermophilus beecheyi*
Desert cottontail	*Sylvilagus audubonii*
Muskrat	*Ondatra zibethicus*
Amphibians and Reptiles	
Western fence lizard	*Sceloporus occidentalis*
Pacific chorus frog	*Pseudacris regilla*

the only amphibian observed in the site; western fence lizard (*Sceloporus occidentalis*) was the only reptiles observed. Although none were observed, the site and surrounding lands provide suitable habitat for species including coast horned lizard (*Phrynosoma coronatum*), western toad (*Bufo boreas*), common king snake (*Lampropeltis getulus*), gopher snake (*Pituophis melanoleucus*), and common garter snake (*Thamnophis sirtalis*).

WATERS OF THE U.S. AND WETLANDS: Waters of the U.S., including wetlands, are broadly defined under 33 Code of Federal Regulations (CFR) 328 to include navigable waterways, many of their tributaries, and adjacent wetlands. State and federal agencies regulate these habitats and Section 404 of the Clean Water Act requires that a permit be secured prior to the discharge of dredged or fill materials into waters of the U.S. Both CDFG and ACOE have jurisdiction over modifications to riverbanks, lakes, stream channels and other wetland features.

Although definitions vary to some degree, wetlands are generally considered to be areas that are periodically or permanently inundated by surface or ground water, and support vegetation adapted to life in saturated soil. Jurisdictional wetlands are vegetated areas that meet specific vegetation, soil, and hydrologic criteria defined by the ACOE *Wetlands Delineation Manual* and Regional Supplement (ACOE, 1987; 2008). Waters of the U.S. are drainage features or water bodies as described in 33 CFR 328.4. Currently, ACOE and the U.S. Environmental Protection Agency (EPA) share authority to determine the jurisdictional status of waters of the U.S., including wetlands.

Jurisdictional wetlands and Waters of the U.S. include, but are not limited to, perennial and intermittent creeks and drainages, lakes, seeps, and springs; emergent marshes; riparian wetlands; and seasonal wetlands. Wetlands and Waters of the U.S. provide critical habitat components, such as nest sites and a reliable source of water, for a wide variety of wildlife species.

There are a few potential waters of the U.S., including wetlands, located throughout the project site that may fall under the jurisdiction of ACOE and CDFG. A total of 7.47 acres of potential waters of the U.S. and wetlands were delineated within the project site. This acreage consists of a portion of Bear Creek (5.87 acre), a pair of parallel irrigation laterals (0.68 acres), two detention basins (0.43 acres), and a roadside ditch along Eight Mile Road and West Lane (0.49 acres).

Bear Creek, which flows east to west across the southern edge of the site, is a Waters of the U.S. under the jurisdiction of both ACOE and CDFG. There is a levee along this section of Bear Creek, providing clear separation between jurisdictional waters and adjacent farmlands.

There are two well-developed agricultural ditches located within the site that have potential to fall under ACOE jurisdiction due to connectivity with Bear Creek via culverts. Smaller annually installed irrigation ditches in the site are believed to be non-jurisdictional because they originate and terminate on site, are created, and hydrologically manipulated for crop irrigation. Similarly, the two detention basins and the roadside ditch are believed to be non-jurisdictional because they were excavated in uplands and are maintained. The jurisdictional status of these created features will be established when ACOE verifies the wetland delineation.

SPECIAL-STATUS SPECIES: Special-status species are plants and animals that are legally protected under the state and/or federal Endangered Species Act or other regulations. The Federal Endangered Species Act (FESA) of 1973 declares that all federal departments and agencies shall utilize their authority to conserve endangered and threatened plant and animal species. The California Endangered Species Act (CESA) of 1984 parallels the policies of FESA and pertains to native California species. Both FESA and CESA prohibit unauthorized "take" (i.e., killing) of listed species, with take broadly defined in both acts to include activities such as harassment, pursuit and possession.

Special-status wildlife species also includes species that are considered rare enough by the scientific community and trustee agencies to warrant special consideration, particularly with regard to protection of isolated populations, nesting or denning locations, communal roosts, and other essential habitat. The federal Migratory Bird Treaty Act and Fish and Game Code of California protect special-status bird species year-round, as well as their eggs and nests during the nesting season. Fish and Game Code of California also provides protection for mammals and fish.

Special-status plants include species which are designated rare, threatened, or endangered and candidate species for listing by the U.S. Fish and Wildlife Service (USFWS). Special-status plants also include species considered rare or endangered under the conditions of Section 15380 of the California Environmental Quality Act (CEQA) Guidelines, such as those plant species identified on Lists 1A, 1B and 2 in the Inventory of Rare and Endangered Vascular Plants of California by the California Native Plant Society (CNPS, 2001). Finally, special-status plants may include other species that are considered sensitive or of special concern due to limited distribution or lack of adequate information to permit listing or rejection for state or federal status, such as those included on List 3 in the CNPS Inventory.

Table 3 provides a summary of the listing status and habitat requirements of special-status plant and wildlife species that have been documented in the greater project vicinity or for which there is potentially suitable habitat within the site. This table also includes an assessment of the likelihood of occurrence of each of these species within the site. The evaluation of the potential for occurrence of each species is based on the distribution of regional occurrences (if any), habitat suitability, and field observations.

Based on the level of disturbance from past and ongoing farming practices, the likelihood of occurrence of listed, candidate, and other sensitive species in the project site is considered to be generally low. A few sensitive species of regional

TABLE 3

SPECIAL-STATUS PLANT AND WILDLIFE SPECIES DOCUMENTED OR POTENTIALLY-OCCURRING IN THE PROJECT VICINITY

Common Name	Scientific Name	Federal Status[1]	State Status[2]	CNPS List[3]	Habitat	Potential for Occurrence in the Site
PLANTS						
Mason's lilaeopsis	*Lilaeopsis masonii*	None	R	1B	Freshwater and brackish marshes, riparian scrub.	Unlikely: Bear Creek and the various irrigation canals and ditches on site do not provide suitable habitat for this species. The nearest occurrence of Mason's lilaeopsis is located in the delta, approximately 3.5 miles southwest of the site (CNDDB, :2010).
WILDLIFE						
Swainson's hawk	*Buteo swainsoni*	None	T	N/A	Nesting: large trees, usually within riparian corridors. Foraging: agricultural fields and annual grasslands.	Moderate: the site provides cropland that Swainson's hawks use for foraging, as well as suitable nest trees. The nearest occurrence of nesting Swainson's hawk is located approximately 1 mile southwest of the site (CNDDB, 2010).
Burrowing owl	*Athene cunicularia*	None	SC	N/A	Open, dry annual or perennial grasslands, deserts and scrublands characterized by low-growing vegetation.	Low: the site contains suitable burrowing habitat, but no burrowing owls or evidence of past owl occupancy were found at the site. Burrowing owls are documented in the CNDDB (2010) approximately 2 miles southeast of the site.
Sensitive salmonids.	*Oncorhynchus mykiss, O. tshawytscha*	None	SC	N/A	Spawns in streams with adequate spawning substrate (cobbles and gravel) and water temperature.	Unlikely: any use of Bear Creek by salmonids (i.e., trout and salmon) would be considered accidental. Further, Bear Creek does not serve as spawning or rearing habitat for salmonids.

TABLE 3

SPECIAL-STATUS PLANT AND WILDLIFE SPECIES DOCUMENTED OR POTENTIALLY-OCCURRING IN THE PROJECT VICINITY

Common Name	Scientific Name	Federal Status[1]	State Status[2]	CNPS List[3]	Habitat	Potential for Occurrence in the Site
Western pond turtle	*Actinemys marmorata*	None	SC	N/A	Freshwater marsh and low gradient streams. Requires basking sites such as logs and snags.	Unlikely: Bear Creek serves as potentially suitable habitat for western pond turtle. However, this species was not observed during the site surveys and is not recorded in the CNDDB (2010) search area.
Giant garter snake	*Thamnophis gigas*	T	T	N/A	Freshwater marsh and low gradient streams. Has adapted to drainage canals and irrigation ditches.	Unlikely: Bear Creek provides very marginal habitat for giant garter snake. This species has not been observed in the project vicinity for several decades; the nearest documented sighting of this species is a 1976 observation at Eight Mile Road and the Western Pacific Rail Road tracks, 1+/- mile west of the site (CNDDB, 2010).
Vernal pool tadpole shrimp	*Lepidurus packardi*	E	None	N/A	Vernal pools	Unlikely: there are no vernal pools at the project site. The only occurrence of vernal pool tadpole shrimp in the CNDDB (2010) search area is several miles north of the project site, near Lodi.

1 T = Threatened; E = Endangered.

2 T = Threatened; R = Rare; SC= State of California Species of Special Concern.

3 CNPS List 1B includes species that are rare, threatened, or endangered in California and elsewhere.

concern with the greatest potential of occurrence or for which there is potential habitat at the site are further discussed in detail below.

SPECIAL-STATUS PLANTS: No special-status plants were observed during the recent surveys. Special-status plants found within the greater project vicinity generally occur in relatively undisturbed areas and are largely found in vegetation communities not present within the project site. Rare plants that occur within the greater project vicinity are found in habitats such as marshes, swamps and riparian scrub, which are not found in or adjacent to the project site. Mason's lilaeopsis (*Lilaeopsis masonii*) is the only sensitive plant species reported in the CNDDB (2010) in the search area (i.e., the Lodi South topographic quadrangle). Bear Creek and some of the on-site irrigation canals and ditches provide very low quality habitat for Mason's lilaeopsis, which is mostly known from habitats in the San Joaquin Delta several miles west of the site.

SPECIAL-STATUS WILDLIFE: The potential for intensive use of habitats within the project site by sensitive wildlife species is generally considered low. Sensitive wildlife species that have been recorded in greater project vicinity in the CNDDB (2010) include Swainson's hawk, burrowing owl (*Athene cunicularia*), giant garter snake (*Thamnophis gigas*), and vernal pool tadpole shrimp (*Lepidurus packardi*). Swainson's hawk and burrowing owl have at least a low potential to occur within the project site on more than a transitory or very occasional basis. These species could be adversely affected by site construction if they nested on or near the project site during construction and are discussed further below. Giant garter snake, western pond turtle, and sensitive fish are also discussed below due to the presence of Bear Creek within the site.

SWAINSON'S HAWK: The Swainson's hawk is a migratory hawk listed by the State of California as a Threatened species. The Migratory Bird Treaty Act and Fish and Game Code of California protect Swainson's hawks year-round, as well as their nests during the nesting season (March 1 through September 15).

Swainson's hawk are found in the Central Valley primarily during their breeding season, a population is known to winter in the San Joaquin Valley.

Swainson's hawks prefer nesting sites that provide sweeping views of nearby foraging grounds consisting of grasslands, irrigated pasture, hay, and wheat crops. Most Swainson's hawks are migratory, wintering in Mexico and breeding in California and elsewhere in the western United States. This raptor generally arrives in the Central Valley in mid-March, and begins courtship and nest construction immediately upon arrival at the breeding sites. The young fledge in early July, and most Swainson's hawks leave their breeding territories by late August.

The CNDDB (2010) contains several records of nesting Swainson's hawk in the greater project vicinity. Further, the project site provides suitable foraging habitat for this species and there are suitable nest trees located within and surrounding the site. While on-site nesting was not confirmed, Swainson's hawks were observed foraging during the 2005 and 2006 surveys.

BURROWING OWL: The Migratory Bird Treaty Act and Fish and Game Code of California protect burrowing owls year-round, as well as their nests during the nesting season (February 1 through August 31). Burrowing owls are a year-long resident in a variety of grasslands as well as scrub lands that have a low density of trees and shrubs with low growing vegetation; burrowing owls that nest in the Central Valley may winter elsewhere.

The primary habitat requirement of the burrowing owl is small mammal burrows for nesting. The owl usually nests in abandoned ground squirrel burrows, although they have been known to dig their own burrows in softer soils. In urban areas, burrowing owls often utilize artificial burrows including pipes, culverts, and piles of concrete pieces. This semi-colonial owl breeds from March through August, and is most active while hunting during dawn and dusk. Burrowing owls

are documented in the CNDDB (2010) in two locations in the search area, with the closest occurrence being approximately 2 miles southeast of the site.

There are ground squirrels and ground squirrel burrows within the site, although no burrowing owl signs (i.e., whitewash, pellets, feathers) were observed in any of the burrows. The burrows within the site are located along the field margins, dirt roads, railroad tracks and the Bear Creek levee). Intensive agriculture and development within and surrounding the site substantially reduce the likelihood of owls potentially using the site for nesting. However, this species likely flies over the site on an occasional basis and could nest in the site during some years.

GIANT GARTER SNAKE: The giant garter snake is listed as a Threatened species on the state and federal endangered species acts. This species is associated with freshwater marshes, low gradient streams, and has adapted to drainage canals and irrigation ditches within the Central Valley. The habitat requirements for the giant garter snake and distribution within San Joaquin County are described in the San Joaquin County Multi-Species Habitat Conservation and Open Space Plan (HCP) (SJCOG, 2000). Bear Creek is not included in the HCP list of creeks as providing potential habitat for the species.

There was an observation of giant garter snake in 1976 within Pixley Slough, approximately 1 mile west of the site along Eight Mile Road and the Western Pacific Rail Road tracks. However, when follow-up surveys were conducted by CDFG at this location over a three-day period in 1995, no giant garter snakes were observed and the habitat was rated only as "fair" at the site (Hansen, 1995). Within the search area, the CNDDB contains no other occurrences of giant garter snake. The likelihood of occurrence of this species in the project site is considered low; giant garter snake has not been found in Bear Creek has not been documented in the greater project vicinity in the recent past.

WESTERN POND TURTLE: Western pond turtle is considered a Species of Concern by CDFG. This species is found in association with perennial aquatic habitats or

in permanent pools in intermittent streams in a variety of habitat types. The CNDDB (2006) does not contain any records of western pond turtle within the Lodi South topographic quadrangle, but there is one in the Terminous topographic quadrangle, approximately 5 miles northwest of the site. While Bear Creek provides marginally suitable habitat for western pond turtle, none were observed during the site surveys.

SENSITIVE FISH: A number of sensitive fish species occur in Delta waterways during various times of the year. These include delta smelt (*Hypomesus transpacificus*), fall/late-fall run, spring-run and winter-run chinook salmon (*Oncorhynchus tshawytscha*), Central Valley steelhead (*O. mykiss*), green sturgeon (*Acipenser medirostris*), river lamprey (*Lampetra ayersi*), Pacific lamprey (*Lampetra tridentata*), and longfin smelt (*Spirinchus thaleichthys*). It is considered likely that some of these sensitive fish utilize Bear Creek, at least on a seasonal basis. However, sensitive fish would not be expected to occur in the on-site portion of Bear Creek on more than a very occasional basis, if at all, due to lack of suitable spawning and rearing habitat.

Conclusions and Recommendations

- The site consists of annual cropland, alfalfa, and an industrial facility. Virtually all of the lands in the site are either intensively cultivated or highly disturbed, and biologically unremarkable.

- Due to lack of suitable habitat, the likelihood of occurrence of special-status plants within the site is considered very low.

- Development of the site may involve removal of a handful of oaks. On-site oaks should be inventoried by an arborist; this inventory should be conducted pursuant to San Joaquin County and/or City of Stockton standards. Heritage oaks should be retained and incorporated into the

project design, if possible. Alternately, if heritage oaks need to be removed, this should be undertaken pursuant to either the San Joaquin County Development Title or City of Stockton ordinance for heritage oaks, both of which require replacement plantings.

- A total of 7.47 acres of potential waters of the U.S. and wetlands were delineated within the project site. This acreage consists of a portion of Bear Creek (5.87 acre), a pair of parallel irrigation laterals (0.68 acres), two detention basins (0.43 acres), and a roadside ditch along Eight Mile Road and West Lane (0.49 acres).

- Bear Creek is Waters of the U.S., which falls under the jurisdiction of agencies including ACOE, CDFG, the State Reclamation Board, and the California Regional Water Quality Control Board (RWQCB).

- Irrigation ditches, detention basins, and a roadside ditch in the site could also fall under the jurisdiction of ACOE. Some of the ditches are connected with Bear Creek, which could trigger jurisdiction due to the hydrological relationship with jurisdictional waters of the U.S. Other ditches and the detention basins are believed to be non-jurisdictional because they were created and/or are not tributary to Bear Creek. The jurisdictional status of these created feature will be established when ACOE verifies the wetland delineation.

- Jurisdictional waters of the U.S. should be avoided to the maximum extent practicable through thoughtful project design. If fill (i.e. utility lines, structures, culverts, road crossings, outfall structures, etc.) is to be placed within jurisdictional waters of the U.S., including wetlands, wetland permits and/or certification may be required from ACOE, CDFG, and Regional Water Quality Control Board.

- Development of the project site will result in a loss of Swainson's hawk foraging habitat, and will contribute to a cumulative loss of Open Space and associated biological resource values. Mitigation for the loss Open Space may be accomplished through participation in the HCP.

- If the project participates in the HCP, standard Take Avoidance measures outlined in the HCP for nesting Swainson's hawks and burrowing owl should be undertaken. Otherwise, pre-construction surveys for nesting Swainson's hawks within 0.25 miles of the project site and burrowing owls within 250 feet of the site should be conducted for construction activities between March 1 and September 15 (for hawks) and February 1 through August 31 (for owls). If active nests are found, a qualified biologist should determine the need (if any) for temporal restrictions on construction. These determination(s) should be made pursuant to criteria set forth by CDFG (1994) and/or CDFG (1995).

- Trees in the site could be used by nesting raptors and other protected birds. In the event any trees that need to be removed or trimmed to facilitate the project, they should be felled or trimmed outside of the general bird nesting season (February 1 through August 31) or a nesting bird survey should be conducted immediately prior to tree removal. If active nests are found, tree felling should be delayed until the young have fledged.

Thank you, again, for asking Moore Biological Consultants to assist with the project. Please feel free to call me at (209) 745-1159 with any questions.

Sincerely,

Diane S. Moore, M.S.
Principal Biologist

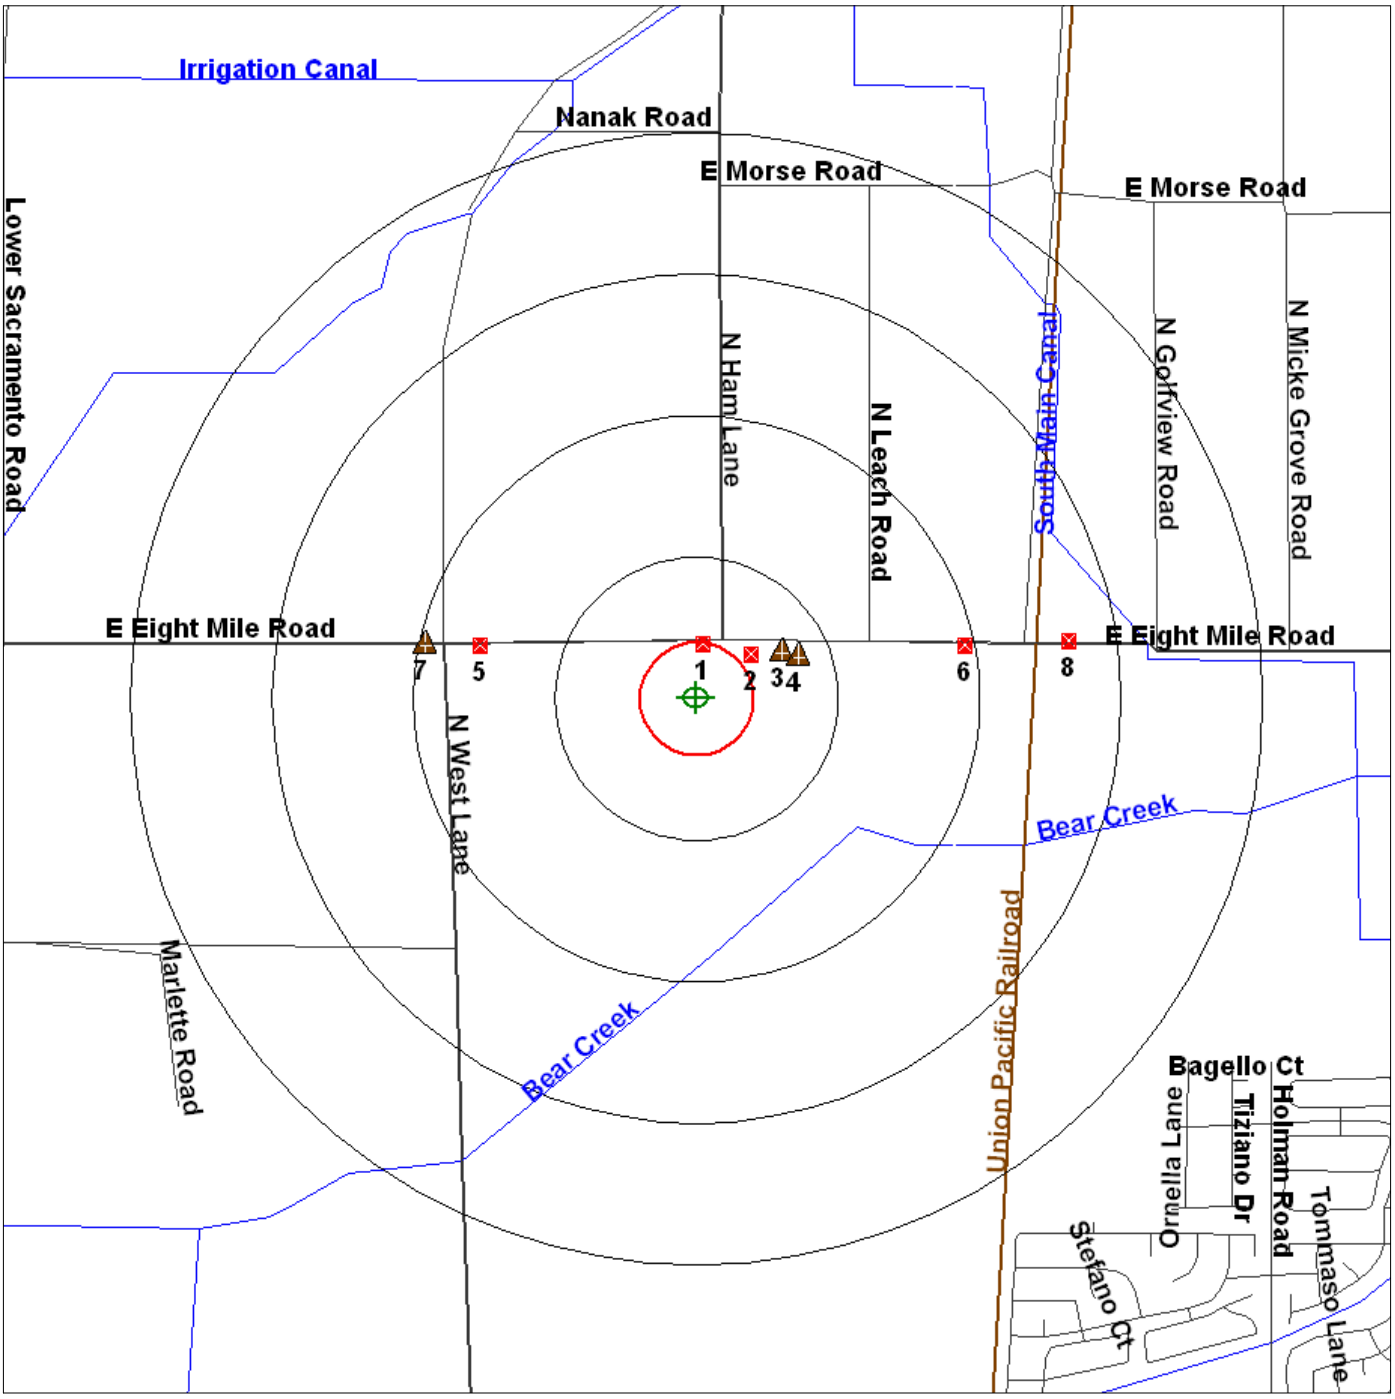
Notice of Disclaimer

Due to the limitations, constraints, inaccuracies and incompleteness of government information and computer mapping data currently available to TRACK Info Services, certain conventions have been utilized in preparing the locations of all federal, state and local agency sites residing in TRACK Info Services's databases. All EPA NPL and state landfill sites are depicted by a rectangle approximating their location and size. The boundaries of the rectangles represent the eastern and western most longitudes; the northern and southern most latitudes. As such, the mapped areas may exceed the actual areas and do not represent the actual boundaries of these properties. All other sites are depicted by a point representing their approximate address location and make no attempt to represent the actual areas of the associated property. Actual boundaries and locations of individual properties can be found in the files residing at the agency responsible for such information.

Waiver of Liability



Although TRACK Info Services uses its best efforts to research the actual location of each site, TRACK Info Services does not and can not warrant the accuracy of these sites with regard to exact location and size. All authorized users of TRACK Info Services's services proceeding are signifying an understanding of TRACK Info Services's searching and mapping conventions, and agree to waive any and all liability claims associated with search and map results showing incomplete and or inaccurate site locations.

UST HISTORICAL DATA

This site was listed in the FIDS Zip Code List as a UST site. The Office of Hazardous Data Management produced the FIDS list. The FIDS list is an index of names and locations of sites recorded in various California State environmental agency databases. It is sorted by zip code and as an index, details regarding the sites were never included.

The UST information included in FIDS as provided by the Office of Hazardous Data Management was originally collected from the SWEEPS database. The SWEEPS database recorded Underground Storage Tanks and was maintained by the State Water Resources Control Board (SWRCB). That agency no longer maintains the SWEEPS database and last updated it in 1994. The last release of that 1994 database was in 1997.

Oversight of Underground Storage Tanks within California is now conducted by Certified Unified Program Agencies referred to as CUPA s. There are approximately 102 CUPA s and Local Oversight Programs (LOP s) in the State of California. Most are city or county government agencies. As of 1998, all sites or facilities with underground storage tanks were required by Federal mandate to obtain certification by designated UST oversight agencies (in this case, CUPA s) that the UST/s at their location were upgraded or removed in adherence with the 1998 RCRA standards.

Information from the FIDS/SWEEPS lists were included in this report search to help identify where underground storage tanks may have existed that were not recorded in CUPA databases or lists collected by us. This may occur if a tank was removed prior to development of recent CUPA UST lists or never registered with a CUPA.

The Native American Consultation Database (NACD) is a tool for identifying consultation contacts for Indian tribes, Alaska Native villages and corporations, and Native Hawaiian organizations. The database is not a comprehensive source of information, but it does provide a starting point for the consultation process by identifying tribal leaders and NAGPRA contacts. This database can be accessed online at the following web address http://home.nps.gov/nacd/

Environmental FirstSearch Descriptions

NPL: ***EPA*** NATIONAL PRIORITY LIST - The National Priorities List is a list of the worst hazardous waste sites that have been identified by Superfund. Sites are only put on the list after they have been scored using the Hazard Ranking System (HRS), and have been subjected to public comment. Any site on the NPL is eligible for cleanup using Superfund Trust money.
A Superfund site is any land in the United States that has been contaminated by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment.
FINAL - Currently on the Final NPL
PROPOSED - Proposed for NPL

NPL DELISTED: ***EPA*** NATIONAL PRIORITY LIST Subset - Database of delisted NPL sites. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.
DELISTED - Deleted from the Final NPL

CERCLIS: ***EPA*** COMPREHENSIVE ENVIRONMENTAL RESPONSE COMPENSATION AND LIABILITY INFORMATION SYSTEM (CERCLIS)- CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL.
PART OF NPL- Site is part of NPL site
DELETED - Deleted from the Final NPL
FINAL - Currently on the Final NPL
NOT PROPOSED - Not on the NPL
NOT VALID - Not Valid Site or Incident
PROPOSED - Proposed for NPL
REMOVED - Removed from Proposed NPL
SCAN PLAN - Pre-proposal Site
WITHDRAWN - Withdrawn

NFRAP: ***EPA*** COMPREHENSIVE ENVIRONMENTAL RESPONSE COMPENSATION AND LIABILITY INFORMATION SYSTEM ARCHIVED SITES - database of Archive designated CERCLA sites that, to the best of EPA's knowledge, assessment has been completed and has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.
NFRAP – No Further Remedial Action Plan
P - Site is part of NPL site
D - Deleted from the Final NPL
F - Currently on the Final NPL
N - Not on the NPL
O - Not Valid Site or Incident
P - Proposed for NPL
R - Removed from Proposed NPL
S - Pre-proposal Site
W – Withdrawn

RCRA COR ACT: ***EPA*** RESOURCE CONSERVATION AND RECOVERY INFORMATION SYSTEM SITES - Database of hazardous waste information contained in the Resource Conservation and Recovery Act Information (RCRAInfo), a national program management and inventory system about hazardous waste handlers. In general, all generators, transporters, treaters, storers, and disposers of hazardous waste are required to provide information about their activities to state environmental agencies. These agencies, in turn pass on the information to regional and national EPA offices. This regulation is governed by the Resource Conservation and Recovery Act (RCRA), as amended by the Hazardous and Solid Waste Amendments of 1984.
RCRAInfo facilities that have reported violations and subject to corrective actions.

RCRA TSD: ***EPA*** RESOURCE CONSERVATION AND RECOVERY INFORMATION SYSTEM

TREATMENT, STORAGE, and DISPOSAL FACILITIES. - Database of hazardous waste information contained in the Resource Conservation and Recovery Act Information (RCRAInfo), a national program management and inventory system about hazardous waste handlers. In general, all generators, transporters, treaters, storers, and disposers of hazardous waste are required to provide information about their activities to state environmental agencies. These agencies, in turn pass on the information to regional and national EPA offices. This regulation is governed by the Resource Conservation and Recovery Act (RCRA), as amended by the Hazardous and Solid Waste Amendments of 1984.
Facilities that treat, store, dispose, or incinerate hazardous waste.

RCRA GEN: ***EPA*** RESOURCE CONSERVATION AND RECOVERY INFORMATION SYSTEM GENERATORS - Database of hazardous waste information contained in the Resource Conservation and Recovery Act Information (RCRAInfo), a national program management and inventory system about hazardous waste handlers. In general, all generators, transporters, treaters, storers, and disposers of hazardous waste are required to provide information about their activities to state environmental agencies. These agencies, in turn pass on the information to regional and national EPA offices. This regulation is governed by the Resource Conservation and Recovery Act (RCRA), as amended by the Hazardous and Solid Waste Amendments of 1984.
Facilities that generate or transport hazardous waste or meet other RCRA requirements.
LGN - Large Quantity Generators
SGN - Small Quantity Generators
VGN – Conditionally Exempt Generator.
Included are RAATS (RCRA Administrative Action Tracking System) and CMEL (Compliance Monitoring & Enforcement List) facilities.

RCRA NLR: ***EPA*** RESOURCE CONSERVATION AND RECOVERY INFORMATION SYSTEM SITES - Database of hazardous waste information contained in the Resource Conservation and Recovery Act Information (RCRAInfo), a national program management and inventory system about hazardous waste handlers. In general, all generators, transporters, treaters, storers, and disposers of hazardous waste are required to provide information about their activities to state environmental agencies. These agencies, in turn pass on the information to regional and national EPA offices. This regulation is governed by the Resource Conservation and Recovery Act (RCRA), as amended by the Hazardous and Solid Waste Amendments of 1984.
Facilities not currently classified by the EPA but are still included in the RCRAInfo database. Reasons for non classification:
Failure to report in a timely matter.
No longer in business.
No longer in business at the listed address.
No longer generating hazardous waste materials in quantities which require reporting.

Federal IC / EC: ***EPA*** BROWNFIELD MANAGEMENT SYSTEM (BMS) - database designed to assist EPA in collecting, tracking, and updating information, as well as reporting on the major activities and accomplishments of the various Brownfield grant Programs.
FEDERAL ENGINEERING AND INSTITUTIONAL CONTROLS- Superfund sites that have either an engineering or an institutional control. The data includes the control and the media contaminated.

ERNS: ***EPA/NRC*** EMERGENCY RESPONSE NOTIFICATION SYSTEM (ERNS) - Database of incidents reported to the National Response Center. These incidents include chemical spills, accidents involving chemicals (such as fires or explosions), oil spills, transportation accidents that involve oil or chemicals, releases of radioactive materials, sightings of oil sheens on bodies of water, terrorist incidents involving chemicals, incidents where illegally dumped chemicals have been found, and drills intended to prepare responders to handle these kinds of incidents. Data since January 2001 has been received from the National Response System database as the EPA no longer maintains this data.

Tribal Lands: ***DOI/BIA*** INDIAN LANDS OF THE UNITED STATES - Database of areas with boundaries established by treaty, statute, and (or) executive or court order, recognized by the Federal Government as territory in which American Indian tribes have primary governmental authority. The Indian Lands of the United States map layer shows areas of 640 acres or more, administered by the Bureau of Indian Affairs. Included are Federally-administered lands within a reservation which may or may not be considered part of the reservation.

State/Tribal Sites: ***CA EPA*** SMBRPD / CAL SITES- The California Department of Toxic Substances Control (DTSC) has developed an electronic database system with information about sites that are known to be contaminated with hazardous substances as well as information on uncharacterized properties where further studies may reveal problems. The Site Mitigation and Brownfields Reuse Program Database (SMBRPD), also known as CalSites, is used primarily by DTSC's staff as an informational tool to evaluate and track activities at

properties that may have been affected by the release of hazardous substances.
The SMBRPD displays information in six categories. The categories are:
1. CalSites Properties (CS)
2. School Property Evaluation Program Properties (SCH)
3. Voluntary Cleanup Program Properties (VCP)
4. Unconfirmed Properties Needing Further Evaluation (RFE)
Please Note: FirstSearch Reports list the above sites as DB Type (STATE).
5. Unconfirmed Properties Referred to Another Local or State Agency (REF)
6. Properties where a No Further Action Determination has been made (NFA)
Please Note: FirstSearch Reports list the above sites as DB Type (OTHER).
Each Category contains information on properties based upon the type of work taking place at the site. For example, the CalSites database is now one of the six categories within SMPBRD and contains only confirmed sites considered as posing the greatest threat to the public and/or the potential public school sites will be found within the School Property Evaluation Program, and those properties undergoing voluntary investigation and/or cleanup are in the Voluntary Cleanup Program.
CORTESE LIST-Pursuant to Government Code Section 65962.5, the Hazardous Waste and Substances Sites List has been compiled by Cal/EPA, Hazardous Materials Data Management Program. The CAL EPA Dept. of Toxic Substances Control compiles information from subsets of the following databases to make up the CORTESE list:
1. The Dept. of Toxic Substances Control; contaminated or potentially contaminated hazardous waste sites listed in the CAL Sites database. Formerly known as ASPIS are included (CALSITES formerly known as ASPIS).
2. The California State Water Resources Control Board; listing of Leaking Underground Storage Tanks are included (LTANK)
3. The California Integrated Waste Management Board; Sanitary Landfills which have evidence of groundwater contamination or known migration of hazardous materials (formerly WB-LF, now AB 3750).
Note: Track Info Services collects each of the above data sets individually and lists them separately in the following First Search categories in order to provide more current and comprehensive information: CALSITES: SPL, LTANK: LUST, WB-LF: SWL

State Spills 90: ***CA EPA*** SLIC REGIONS 1 - 9- The California Regional Water Quality Control Boards maintain report of sites that have records of spills, leaks, investigation, and cleanups.

State/Tribal SWL: ***CA IWMB/SWRCB/COUNTY*** SWIS SOLID WASTE INFORMATION SYSTEM-The California Integrated Waste Management Board maintains a database on solid waste facilities, operations, and disposal sites throughout the state of California. The types of facilities found in this database include landfills, transfer stations, material recovery facilities, composting sites, transformation facilities, waste tire sites, and closed disposal sites. For more information on individual sites call the number listed in the source field..
Please Note: This database contains poor site location information for many sites in the First Search reports; therefore, it may not be possible to locate or plot some sites in First Search reports.
WMUDS-The State Water Resources Control Board maintained the Waste Management Unit Database System (WMUDS). It is no longer updated. It tracked management units for several regulatory programs related to waste management and its potential impact on groundwater. Two of these programs (SWAT & TPCA) are no longer on-going regulatory programs as described below. Chapter 15 (SC15) is still an on-going regulatory program and information is updated periodically but not to the WMUDS database. The WMUDS System contains information from the following agency databases: Facility, Waste Management Unit (WMU), Waste Discharger System (WDS), SWAT, Chapter 15, TPCA, RCRA, Inspections, Violations, and Enforcement's.
Note: This database contains poor site location information for many sites in the First Search reports; therefore, it may not be possible to locate or plot some sites in First Search reports.
ORANGE COUNTY LANDFILLS LIST- A list maintained by the Orange County Health Department.

State/Tribal LUST: ***CA SWRCB/COUNTY*** LUSTIS- The State Water Resources Control Board maintains a database of sites with confirmed or unconfirmed leaking underground storage tanks. Information for this database is collected from the states regional boards quarterly and integrated with this database.
SAN DIEGO COUNTY LEAKING TANKS- The San Diego County Department of Environmental Health maintains a database of sites with confirmed or unconfirmed leaking underground storage tanks within its HE17/58 database. For more information on a specific file call the HazMat Duty Specialist at phone number listed in the source information field.

State/Tribal UST/AST: ***CA EPA/COUNTY/CITY*** ABOVEGROUND STORAGE TANKS LISTING-The Above Ground Petroleum Storage Act became State Law effective January 1, 1990. In general, the law requires owners or operators of AST's with petroleum products to file a storage statement and pay a fee by July 1, 1990 and every two years thereafter, take specific action to prevent spills, and in certain instances implement a

groundwater monitoring program. This law does not apply to that portion of a tank facility associated with the production oil and regulated by the State Division of Oil and Gas of the Dept. of Conservation.
SWEEPS / FIDS STATE REGISTERED UNDEGROUND STORAGE TANKS- Until 1994 the State Water Resources Control Board maintained a database of registered underground storage tanks statewide referred to as the SWEEPS System. The SWEEPS UST information was integrated with the CAL EPA's Facility Index System database (FIDS) which is a master index of information from numerous California agency environmental databases. That was last updated in 1994. Track Info Services included the UST information from the FIDS database in its First Search reports for historical purposes to help its clients identify where tanks may possibly have existed. For more information on specific sites from individual paper files archived at the State Water Resources Control Board call the number listed with the source information.
INDIAN LANDS UNDERGROUND STORAGE TANKS LIST- A listing of underground storage tanks currently on Indian Lands under federal jurisdiction. California Indian Land USTS are administered by US EPA Region 9.
CUPA DATABASES & SOURCES- Definition of a CUPA: A Certified Unified Program Agency (CUPA) is a local agency that has been certified by the CAL EPA to implement six state environmental programs within the local agency's jurisdiction. These can be a county, city, or JPA (Joint Powers Authority). This program was established under the amendments to the California Health and Safety Code made by SB 1082 in 1994.
A Participating Agency (PA) is a local agency that has been designated by the local CUPA to administer one or more Unified Programs within their jurisdiction on behalf of the CUPA. A Designated Agency (DA) is an agency that has not been certified by the CUPA but is the responsible local agency that would implement the six unified programs until they are certified.
Please Note: Track Info Services, LLC collects and maintains information regarding Underground Storage Tanks from majority of the CUPAS and Participating Agencies in the State of California. These agencies typically do not maintain nor release such information on a uniform or consistent schedule; therefor, currency of the data may vary. Please look at the details on a specific site with a UST record in the First Search Report to determine the actual currency date of the record as provided by the relevant agency. Numerous efforts are made on a regular basis to obtain updated records.

State/Tribal IC: ***CA EPA*** DEED-RESTRICTED SITES LISTING- The California EPA's Department of Toxic Substances Control Board maintains a list of deed-restricted sites, properties where the DTSC has placed limits or requirements on the future use of the property due to varying levels of cleanup possible, practical or necessary at the site.

State/Tribal VCP: ***CA EPA*** SMBRPD / CAL SITES- The California Department of Toxic Substances Control (DTSC) has developed an electronic database system with information about sites that are known to be contaminated with hazardous substances as well as information on uncharacterized properties where further studies may reveal problems. The Site Mitigation and Brownfields Reuse Program Database (SMBRPD), also known as CalSites, is used primarily by DTSC's staff as an informational tool to evaluate and track activities at properties that may have been affected by the release of hazardous substances.
The SMBRPD displays information in six categories. The categories are:
1. CalSites Properties (CS)
2. School Property Evaluation Program Properties (SCH)
3. Voluntary Cleanup Program Properties (VCP)
4. Unconfirmed Properties Needing Further Evaluation (RFE)
5. Unconfirmed Properties Referred to Another Local or State Agency (REF)
6. Properties where a No Further Action Determination has been made (NFA)
Please Note: FirstSearch Reports list the above sites as DB Type VC. Each Category contains information on properties based upon the type of work taking place at the site. The VC category contains only those properties undergoing voluntary investigation and/or cleanup and which are listed in the Voluntary Cleanup Program.

RADON: ***NTIS*** NATIONAL RADON DATABASE - EPA radon data from 1990-1991 national radon project collected for a variety of zip codes across the United States.

State Permits: ***CA COUNTY*** SAN DIEGO COUNTY HE17 PERMITS- The HE17/58 database tracks establishments issued permits and the status of their permits in relation to compliance with federal, state, and local regulations that the County oversees. It tracks if a site is a hazardous waste generator, TSD, gas station, has underground tanks, violations, or unauthorized releases. For more information on a specific file call the HazMat Duty Specialist at the phone number listed in the source information field.
SAN BERNARDINO COUNTY HAZARDOUS MATERIALS PERMITS- Handlers and Generators Permit Information Maintained by the Hazardous Materials Division.

State Other: ***CA EPA/COUNTY*** SMBRPD / CAL SITES- The California Department of Toxic Substances

Control (DTSC) has developed an electronic database system with information about sites that are known to be contaminated with hazardous substances as well as information on uncharacterized properties where further studies may reveal problems. The Site Mitigation and Brownfields Reuse Program Database (SMBRPD), also known as CalSites, is used primarily by DTSC's staff as an informational tool to evaluate and track activities at properties that may have been affected by the release of hazardous substances.
The SMBRPD displays information in six categories. The categories are:
1. CalSites Properties (CS)
2. School Property Evaluation Program Properties (SCH)
3. Voluntary Cleanup Program Properties (VCP)
4. Unconfirmed Properties Needing Further Evaluation (RFE)
Please Note: FirstSearch Reports list the above sites as DB Type (STATE).
5. Unconfirmed Properties Referred to Another Local or State Agency (REF)
6. Properties where a No Further Action Determination has been made (NFA)
Please Note: FirstSearch Reports list the above sites as DB Type (OTHER).
Each Category contains information on properties based upon the type of work taking place at the site. For example, the CalSites database is now one of the six categories within SMPBRD and contains only confirmed sites considered as posing the greatest threat to the public and/or the potential public school sites will be found within the School Property Evaluation Program, and those properties undergoing voluntary investigation and/or cleanup are in the Voluntary Cleanup Program.
LA COUNTY SITE MITIGATION COMPLAINT CONTROL LOG- The County of Los Angeles Public Health Investigation Compliant Control Log.
ORANGE COUNTY INDUSTRIAL SITE CLEANUPS- List maintained by the Orange County Environmental Health Agency.
RIVERSIDE COUNTY WASTE GENERATORS-A list of facilities in Riverside County which generate hazardous waste.
SACRAMENTO COUNTY MASTER HAZMAT LIST-Master list of facilities within Sacramento County with potentially hazardous materials.
SACRAMENTO COUNTY TOXIC SITE CLEANUPS-A list of sites where unauthorized releases of potentially hazardous materials have occurred.

State Other: ***US DOJ*** NATIONAL CLANDESTINE LABORATORY REGISTER - Database of addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the U.S. Department of Justice ("the Department"), and the Department has not verified the entry and does not guarantee its accuracy. All sites that are included in this data set will have an id that starts with NCLR.

Peer Review – Phase I Environmental Site Assessments
BEAR CREEK EAST SPECIFIC PLAN
WKA No. 5885.03

Mr. Simpson:

In accordance with our scope of work dated April 7, 2005, Wallace-Kuhl & Associates Inc. (WKA) has complete a peer review of existing Bear Creek East Specific Plan (Plan) Phase 1 Environmental Site Assessments (ESAs). The purpose of the peer review was to determine whether further action to investigate pesticide usage at the proposed residential subdivisions within the Plan area is warranted and to evaluate the need for soil sampling along the Santa Fe Pacific liquid petroleum pipeline bordering the east side of the Plan area.

The Bear Creek East Specific Plan environmental documents reviewed as part of this task included:

- Aqua Science Engineers Inc., *Phase I Environmental Site Assessment*, July 30, 2002
- ATC Associates Inc., *Environmental Site Assessment*, September 12, 2003
- Environmental Science Services Inc., *Phase 1 Environmental Site Assessment*, March 2004
- M.J. Kloberdanz & Associates, *Phase 1 Environmental Assessment*, February 9, 2005.

In addition to reviewing the aforementioned environmental documents, aerial photographs for the years 1963, 1973, 1984, 1990, and 1999 were evaluated to develop a reasonably continuous indication of the site history.

FINDINGS

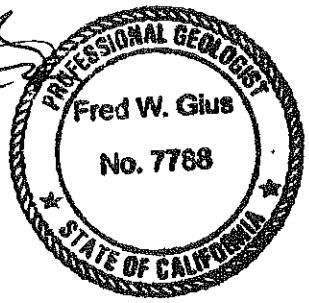
The Plan area in the earliest decades of available air photo coverage supported predominantly rice, with a lesser area devoted to dry-farmed crops. By the 1980s, the Plan area supported some dry-farmed crops, although aerial photographs indicate certain fields appear to contain irrigated haycrops or irrigated pastures. By the 1990s, irrigated pastures or haycrops, and dry-farmed land areas again predominated. These agricultural uses are considered to be low-intensity and are not typically prone to attack by pests. As such, the land areas would not have been subject to application of persistent pesticides, i.e. the organochlorine variety.

One of the ESA's reviewed recommended collecting soil samples from the fields to evaluate the potential for elevated concentrations of pesticides and herbicides. However, it appears that the other firm did not opine the crop history based on air photo observations. The other firm limited their discussion to the fact that their studied site is "agricultural" or "farmland."

Concerning the liquid petroleum pipeline located on the Santa Fe Pacific Railroad right-of-way, there was no surficial evidence presented in the existing ESA's or identified during WKA's site reconnaissance to warrant further investigations. To further support this determination, WKA reviewed the regulatory agency databases obtained by Environmental Data Resources, Inc. (EDR) for known "dig-ins" or known leaks along the segment of pipeline that is adjacent to and within about one-quarter mile from the nearest boundaries of the Plan area. No documented releases were found in EDR's search of available government records either within the Plan area or within the required search radius around the Plan area.

CONCLUSIONS

In WKA's opinion, surficial soils sampling and testing for potential persistent pesticide residuals appears unwarranted given the crop histories for the various project sites comprising the Plan area. We do not make a recommendation to sample and test on the subject property nearest to the petroleum products pipeline. That is something that a client has to decide whether to do based on their own risk tolerance policies. With respect to future development requirements, normally WKA observes that the entitlement agency (City or County Planning Dept., for example), instructs the developer as to how far the set back must be between the edge of the future subdivision and the pipeline location.



Recycled paper

WKA's opinions as presented above may not be in line with the Department of Toxic Substances Control requirements on these topics in consideration of a proposed school site. Additionally, it will be critical that the proposed school within the Plan area be a minimum of 1500 feet away from the petroleum pipeline location.

If you have any questions with regard to this letter, please do not hesitate to call me at (209) 234-7722.

1.0 EXECUTIVE SUMMARY

Based on the visual inspection of the subject site, the historical and database reviews, and local agency contact, the following environmental observations are noted.

On-Site

The subject site is an agricultural property at the address of 2420-2750 Eight Mile Road, Stockton, California 95212. The property has a recorded history of being an agricultural field with no history of development. The site improvements are limited to a dirt perimeter road, to surface irrigation channels, and to a raised levee/roadway bordering Bear Creek. The site has no structures. The property is currently planted in a corn crop, but the type of crop is reportedly rotated year by year.

* The property contains no groundwater wells, wastewater clarifiers, or septic treatment systems.

need to investigate

The subject site has no agency record of historical fuel storage tanks, and no obvious external signs of fuel-storage tank equipment. The east adjacent SPRR line incorporates a fuel pipeline. This
* pipeline represents a significant potential for hydrocarbon releases to the subject site, and is a Recognized Environmental Concern.

The property's agricultural crop production and its setting in the San Joaquin Valley of Central California associate it with agricultural applications of herbicide, pesticide, and fertilizer. Our findings did not reveal any direct evidence that the subject site has significantly experienced undue or improper application of these agricultural chemicals. However, the potential for elevated concentrations of agricultural chemicals represents a Recognized Environmental Concern should the site usage change.

Two Recognized Environmental Concerns (RECs) were found in respect to the 98-Acre Parcel, the subject site:

- a potential for elevated agricultural chemical residues, and,
- a potential for hydrocarbon releases from the adjoining fuel pipeline.

In the event of a site use change from agriculture, ASE recommends an agricultural study for potential pesticide levels that may be in conflict with the proposed use.

Off-Site

The adjacent sites do not appear to present a significant environmental concern to the subject site at this time, with the exception of the adjoining fuel pipeline in the east adjacent Southern Pacific Railroad right of way.

* ASE recommends a subsurface environmental assessment be performed in accordance with local agency guidelines to determine if any petroleum releases have occurred along the SPRR fuel pipeline.

2.0 INTRODUCTION

2.1 Purpose

The objective of this Phase I Environmental Site Assessment was to identify, to the extent feasible, recognized environmental conditions (RECs) in connection with the subject property relative to the date of this report. This Phase I Environmental Site Assessment contains four major components (1) records review; (2) site reconnaissance; (3) interviews with regulatory agencies/property owners; (4) reporting. This Phase I Environmental Site Assessment was prepared using the guidelines within the American Society for Testing and Materials (ASTM) Designation: E 1527-00.

2.2 Special Terms and Conditions

No special terms or conditions were made between Aqua Science Engineers, Inc. (ASE) and Fran Mar Corp. LP, Thomas Cattani, etal., our Client, or the operators of the subject property. This report has been produced by ASE to be within the scope of the American Society for Testing and Materials (ASTM) *Standard Practice for Environmental Assessment: Phase I Environmental Site Assessment Process* document (Designation: E 1527-00).

2.3 Limitations and Exceptions of Assessment

As noted in the ASTM E 1527-00 Standard Practice document, the environmental professional conducting the Phase I Environmental Site Assessment is responsible to determine the content of the report. Therefore, Aqua Science Engineers, Inc. (ASE), with extensive experience in conducting Phase I Environmental Site Assessments, has strategically designed this Phase I Environmental Site Assessment to provide a site-specific evaluation of the environmental conditions affecting the subject site. This report has been prepared for use solely by Fran Mar Corp. LP, Thomas Cattani, etal., our Client. This report shall not be relied upon by or transferred to any other party, or used for any other purpose, without the express written authorization of our Client, and Aqua Science Engineers.

3.0 SITE DESCRIPTION

3.1 Location and Legal Description

The subject property contains an agricultural field with the address of Nos. 2420-2750 Eight Mile Road in the City of Stockton, County of San Joaquin, and State of California. The property is approximately 98 acres in area.

The assessor's parcel number for the property is No. 092-020-15. We were provided with a title report dated 6/20/02 from Alliance Title as part of our research, which indicated the site address as 2420 Eight Mile Road. The title report lists no environmental liens against the property.

The site has street frontage on the south side of Eight Mile Road, and is otherwise bounded by its adjoining light-industrial properties on the west and east, fields on the west and north, an RV campground on the north, and Bear Creek and fields on the south. Please refer to Figures No. 1 through 4 for detailed diagrams and photographs of the subject site.

3.2 Site and Vicinity Characteristics

The subject site lies within a mixed-use zoning of agricultural and light-industrial use in the city limits of Stockton, California. The surrounding area is predominantly agricultural, as shown in Figure No. 3, Site Diagram, in Appendix A. Light-industrial and residential use occurs within 1/8 mile of the site.

3.3 Description of Structures, Roads, and Improvements

The site's current agricultural usage dates at least to the 1930s, according to our resources. The city streets have been in place for decades. The subject site has access via dirt roadways into Eight Mile Road. A liquid fuel lines for petroleum runs parallel the Southern Pacific Railroad track on the property's east border. No major power transmission corridors are known to cross or adjoin the subject site.

We observed that the Eight Mile Road right-of-way includes utility lines for such municipal utilities as electricity, water, telephone, and sewerage. However, the subject site currently has no formal connections to these utilities, and is served only by the surface channels of the local irrigation district.

3.31 Source of Potable Water

The property is not formally served with a potable water source, and utilizes only irrigation water supplied by the local irrigation district. The site has no private groundwater wells. The municipal source of water is drawn both from deep wells and from the Sacramento River.

3.32 Storm Drains and Sanitary Sewer Systems

The subject site is not connected to a municipal sanitary sewer system, private septic tank system, or storm drain system. Storm water is allowed to percolate into the agricultural field across its entire surface. A surface channel connects the field to the local irrigation district for control over supply and drainage.

It was noted that the adjacent PacBell property utilizes an engineered storm drain system, which involves a large catchment basin located at the south of the PacBell site. This basin was a standard development criterion required by the local planning department due to the site's pavements and lack of alternative storm drain access. We observed no apparent signs of environmental misuse of the storm water drainage.

3.33 Recycling and Solid Waste Disposal

Municipal service for recycling and solid waste disposal is not required for the property use.

3.34 Heating, Ventilation, and Cooling (HVAC) Systems

The property does not require a HVAC system.

3.35 Storage Tanks

No evidence of fuel storage tank equipment was observed, and no agency documents indicate an onsite UST history.

The north and east adjacent sites have a recorded fuel tank history, as further discussed in this report's Section 5.0, Regulatory Review.

3.36 Radon Statistics

The EDR report indicates that the subject area of San Joaquin County has an EPA Radon Zone 3 rating. The reported average indoor levels of radon gas were 2.7 pCi/L or less, which is below the 4.0 pCi/L threshold level of concern. ASE did not test for radon at the subject site.

3.4 Environmental Setting

3.41 Geology

The site rests within the San Joaquin Valley, in the Great Valley Geomorphic Province of California, on relatively level ground at an elevation of approximately 30 feet above mean sea level. Descriptive reports prepared for local sites indicate that the subsurface of the subject property consists primarily of alluvial sediments deposited by Bear Creek and the general deltaic system of the Sacramento River. Local soils reports indicate the surface soils are silty clay loam of the Vignolo type, with low slopes of less than two percent. Sedimentary deposits in this area are on the order of several hundreds of feet in thickness.

The subject site is not within an Alquist-Priolo Seismic Studies Zone.

3.42 Hydrogeology/Hydrology

Groundwater is anticipated to lie within 25 feet below ground surface, flowing in a low gradient in the northeasterly direction, based on the site's setting in an irrigated district, the topographic slope, and the proximity to Bear Creek. The Regional Water Quality Control Board protects the near-surface groundwater in this groundwater basin area as a natural resource and as a potential source of drinking water.

The site is mapped within the 500-year recurrence flood zones by FIRM Maps on CPN 0602990295B, dated 9/30/82. The nearest surface body of water is Bear Creek on the south border of the subject site, which is within the 100-year flood zone enclosed by the levee system. The site lies outside of the mapped wetland areas of Bear Creek.

3.5 Information Regarding Environmental Liens

No environmental liens were identified for the subject site during the preparation of this report.

3.6 Current Use of Property

On July 23, 2002, ASE representative Mr. Rick Widebrook conducted a site walk at the subject site. We obtained supporting information on the site from the site's realtor, Mr. Tad Platt, and from Mr. David Beretta, the property owner.

The site is approximately 98 acres in area. Its area is dominated by the agricultural field, which currently supports a corn crop. The perimeter of the field contains dirt roadways and irrigation channels built of embanked soil. A windrow of silage, i.e., natural soil enhancement materials, had recently been placed for storage on the south edge of the site. Small amounts of miscellaneous debris, such as tires and broken appliances, littered the rear corner ditches of the property. We observed no signs of distressed vegetation.

Features of the adjoining properties are discussed in the next section.

Based upon our sitewalk, interviews, and record reviews, we observed no obvious signs of significant environmental concerns related to the current activities of the subject site. Although the subject site's farming operation involve use of agricultural products, it appears to do so in a manner consistent with similar facilities complying with local, state, and federal regulations.

3.7 Former Uses and History of Property

Aerial photographs and property documents indicate the first use of the site as an agricultural field prior to the 1930s. A more-detailed history of onsite farming could not be reconstructed from the reasonably available sources.

3.71 Rationale

The purpose of the records review is to obtain and review records, photographs, maps and other related historical documents that will assist in the identification of recognized environmental conditions in connection with the subject property. The objective of consulting historical sources is to develop a history of the property and surrounding area. This review helps identify the likelihood of past uses having led to recognized environmental conditions in connection with the property. The following recommended sources/databases are used to investigate the property history.

3.72 Historical Aerial Photographs Review

ASE representative Rick Widebrook viewed aerial photographs of the area from the UC-Davis Earth Sciences Library and the County of Stockton Planning department on July 23, 2002.

1937 & 1952

The subject site was crop-production farmland, as were the surrounding properties. The Southern Pacific Railroad adjoined the east side of the property, and Bear Creek adjoined the south border of the property.

1957 & 1963

The subject site and north, west, and south sites remained agricultural, but the PacBell facility was developed out of the northwestern corner of the subject parcel. The east adjacent site contained the Tri-Valley Growers canning plant, consisting of large buildings, parking lots, and eight industrial processing ponds.

1975 & 1985

The subject site and north, west, and south sites remained agricultural. The Tri-Valley Growers canning plant on the east adjacent site expanded. The levees on Bear Creek were enlarged.

2002

The subject site and north, west, and south sites remained agricultural. The east adjacent site remained the Tri-Valley Growers canning plant. A new development (Freitas Trucking) was visible on the east side of the PacBell facility.

In summary, the aerial photographs confirmed the general progression of site use as established through other similar sources of historical evidence. No potentially negative features onsite could be ascertained from the available photographic resolutions.

3.73 Historical Maps Review (Sanborn Fire Insurance; USGS Historical Topo Maps)

The historical Sanborn Maps do not cover the study area. A current USGS topographic map contained the following features.

- The subject site contained the flood-controlled channel of Bear Creek.
- The west adjacent site contained a "Well 29".
- The east adjacent site contained large buildings, storage units, and six storage ponds.

3.74 Business License Review

The local financial and tax records offices were not able to provide us with useful documentation.

3.75 Building Permit Review

Research of historical building permits was made by ASE at the City of Stockton Department of Public Works on July 23, 2002. No permits were recovered, which was consistent with the agricultural property usage.

3.76 City Directory Review

No potentially useful city directories for Stockton were available.

4.0 SURROUNDING PROPERTIES

4.1 Description

A general description of the usage of surrounding and/or adjoining properties is determined by the environmental professional during the site visit, through interviews or from the records review. This is performed to help identify recognized environmental concerns that may have the potential to impact the subject site.

4.11 Current Uses of Surrounding and/or Adjoining Properties

Based on our site visit, the use of the surrounding properties includes light industrial use, agricultural fields, a railroad track, and residential use. The west adjacent sites include the PacBell corporation yard, and the Freitas Trucking corporation yard. The east adjacent site is the defunct canning plant of Tri-Valley Growers. A Southern Pacific Railroad track runs north-south at the subject site's east side, and also contains a buried petroleum pipeline. One of the north adjacent properties is a KOA RV campground.

4.12 Former Uses of Surrounding and/or Adjoining Properties

The east adjacent site is the Tri-Valley Growers now-closed canning plant, reportedly operational from 1950 to about 1995. The plant's former storage ponds on the back lot were reportedly used to hold vegetable-washing water. Otherwise, based upon historical evidence review, the remaining uses of the surrounding properties were indicated to be similar to the present usage.

5.0 REGULATORY REVIEW

5.1 Purpose

The purpose of the regulatory review is to research regulatory agency records that will assist in the identification of recognized environmental conditions in connection with the subject property and neighboring properties within a 1-mile radius. The regulatory review also includes visiting or contacting local regulatory agency representatives for interviews regarding the subject site or surrounding properties. The regulatory review is split into three major components (1) federal, (2) state, and (3) local. We have summarized the sources/databases used to investigate the regulatory issues of the subject site and surrounding properties. The following information was provided to ASE by EDR, Inc. (See Appendix D, for the full EDR report).

The subject site does not appear on any of the databases, which is consistent with its known history of use.

5.2 Federal

5.21 The National Priorities List (NPL)

There are no NPL sites within 1-mile radius of the subject site.

5.22 RCRA Corrective Actions (CORRACTS & CORRACTS-TSD)

The subject site address is not listed on the database. There are no CORRACTS sites within a 1-mile radius of the subject site.

5.23 Resource, Conversation and Recovery Act (RCRA; RCRIS-TSD)

The subject site address is not listed on the database. There are no RCRA corrective action sites or RCRA permitted treatment, storage or disposal facility within 1/2-mile radius of the subject site.

5.24 Emergency Response Notification System (ERNS)

The subject site address is not listed on the database.

5.25 RCRA Registered Generators of Hazardous Waste (GNRTR, RCRIS-LQG/SQG))

The subject site address is not listed on the database. There are no listed small-quantity generator within 1/8th mile, and one (1) small-quantity generator within 1/8th to 1/4 mile of the subject site.

5.3 State

5.31 Solid Waste Landfill Facilities (State Landfill, WMUDS/SWAT)

The subject site address is not listed on the database. There are no WMUDS/SWAT or State Landfill sites within 1/2-mile radius of the subject site.

5.32 Leaking Underground Storage Tank List (LUST)

The subject site address is not listed on the database. There are no LUST sites within 1/8-mile radius of the subject site; no LUST sites within a 1/8-1/4 mile radius of the subject site, and one (1) LUST site within a 1/4 to 1/2 mile radius of the subject site. We reviewed the closest sites of potential concern. None of the listed sites were considered to be sufficiently close or serious enough to pose a potential concern to the subject site. The one listed site (KOA Campground) currently received regulatory closure of it past release, and is currently without violation.

5.33 Hazardous Waste and Substances Sites (HWIS)

The subject address is not listed on the database. No HWIS sites were listed in the EDR report.

5.34 California Cerclis/ State Equivalent Priority List (SPL)

The subject site is not listed on the database. There is no site within 1-mile radius of the subject site.

5.35 Cal-Sites

The subject site address is not listed on the Cal-Sites database. There are no Cal-Sites cases within 1-mile radius of the subject site.

5.36 State Registered Underground or Aboveground Storage Tanks (UST/AST/HistUST)

The subject site is not listed on the UST/AST database. There is one (1) Historical UST site within 1/4-mile radius of the subject site. There is one (1) site on the Ca FID UST list within 1/8th mile of the subject site. Both these listings are cases that are not anticipated to pose a potentially significant environmental concern to the subject site, due to the reported tank characteristics and the local hydrogeology.

5.38 Cortese List (Cortese Senate Bill; Impacted Drinking Water Wells)

There are two (2) Cortese sites within a 1-mile radius of the subject site, of which are both greater than 1/4 mile of the subject site. None of the listings were interpreted to pose a potential environmental concern to the subject site.

5.4 Local

5.41 Regional Water Quality Control Board (RWQCB)

The Regional Water Quality Control Board indicated that their files did not include any of the local LUST cases. The County is the Local Oversight Program, as reported below in Section 5.42.

5.42 County Environmental Health Department Local Oversight Program

The County of Stockton, Department of Environmental Health, Local Oversight Program carried the pertinent UST and LUST files. Our research found that the nearest site, the KOA Campground, was not a significant release and has received regulatory closure. The former Tri-Valley Growers Plant #4 is listed with a Historical UST. In both these cases, our interpretation of the site specifics and the local hydrogeology places these sites downgradient of the subject site and not a potential concern the subject site.

5.43 City Fire Department, Fire Prevention Bureau

The City of Stockton Fire Department referred our inquiry to the County of Stockton.

5.44 City Building Department

Please see Section 3.75 for a discussion about permit-related information for the subject site. No environmental concerns were discovered in the building permit records.

6.0 SITE RECONNAISSANCE AND INTERVIEWS

6.1 Hazardous Substances/Materials Usage and Storage

Our interviewees informed us that the subject site is an agricultural user of categorical hazardous materials, including herbicides, pesticides, and fertilizers. We observed that there are no onsite storage activities for agricultural products outside of a recent pile of organic silage/soil builder material on the south border. No obvious signs of significant noncompliance issues were observed.

6.2 Hazardous Waste Storage, Disposal

Our observations, interviews, and records research indicate that no significant quantities of spent products, motor oil, antifreeze, etc. are generated, stored, or disposed of onsite.

6.3 Underground & Aboveground Storage Tanks, Sumps, Drains

The site has no current or historic USTs, as per the records, site walk, and personal interviews. The local environmental records indicated that no recorded tank usage had occurred.

The east adjacent site is currently the only user of a UST, per the Historical UST database. A small AST on a portable trailer was observed in use on the west adjacent site to fuel a small diesel motor on an irrigation pump.

Storm drainage onsite consists of sheet runoff to the onsite irrigation drains leading into Bear Creek. The street has no municipal storm drain system. We observed no significant staining in the drains or other potential concerns regarding the storm drainage onsite.

6.4 Identification of PCBs

No significant potential source of PCB-containing light ballasts was observed onsite. Four power utility transformers are located near the rear of the site. The transformers appeared to be recent models not indicative of potential PCB use; PG&E has updated virtually all older power transformers of potential PCB concern.

6.5 Identification of Asbestos Containing Materials or Lead-based Paint

The site has no structures or debris piles, therefore it has no concerns of Potentially Asbestos-Containing Materials (PACMs) or Lead-based Paint. It is noted that this Phase I ESA did not include testing of building materials.

6.6 Surface Staining, Distressed Vegetation

We did not find unusual or significant surface stains indicative of environmental releases on the site's asphalt parking lot. No distressed vegetation was indicated.

6.7 Summary of Interviews

ASE representative Mr. Rick Widebrook spoke to Mr. Tad Platt, a realtor familiar with the property. Mr. Platt said that to his knowledge regarding USTs, sumps, lagoons, or land disposals, the subject site has no history of such activities. The east adjacent site of the defunct canning plant formerly used storage ponds to aerate its water-based vegetable-washing effluent. The west adjacent site contains a large stormwater catchment basin. However, both these adjacent site uses do not involve significant potential environmental concerns, and do not pose a significant issue to the subject site. The west adjoining SPRR right of way contains a petroleum pipeline. The pipeline represents a significant presence of petroleum and related equipment, which poses a recognized environmental concern of potential releases to the subject site.

6.8 Other Conditions of Concern

The predominantly agricultural area, the San Joaquin Valley, enclosing the subject site has a long agricultural history. The subject site is not known to have experienced atypical agricultural applications of agricultural chemical products, or contain residual levels significantly in excess of the regional background. Nevertheless, if a change in site usage from agriculture is planned, an agriculture-oriented study to identify and quantify the potential for residual pesticide levels onsite would be recommended.

7.0 CONCLUSIONS

7.1 Subject Site

The property's historical use prior to the 1930s is indicated to be consistently agricultural cropland.

Of the documented records of nearby environmental cases, none were interpreted as a potential concern to the subject site. The listed database cases are either currently closed, are currently compliant, or are considered to be hydrogeologically unlikely to pose a potential environmental concern to the subject site.

The site contains no building materials or debris piles. Therefore, no significant concern of asbestos-containing or lead-containing building materials is anticipated. The property contains no groundwater wells, wastewater clarifiers, or septic treatment systems.

The subject site has no agency record of historical fuel storage tanks, and no obvious external signs of fuel-storage tank equipment. The property is currently planted in a corn crop, but the type of crop is reportedly rotated year by year.

The property's involvement in agricultural crop production and its setting in the San Joaquin Valley of Central California associates it with agricultural applications of herbicide, pesticide, and fertilizer. Our findings did not reveal any evidence that the subject site has significantly experienced undue or improper application of these agricultural chemicals. However, in the event of a site use change

from agriculture, it is recommended that a formal study for residual pesticide concentrations be coordinated with the local planning commission.

Two Recognized Environmental Concerns (RECs) were found in respect to the 98-Acre Parcel, the subject site: 1), the hydrocarbon pipeline on the SPRR right-of-way, and 2), the potential for elevated residual pesticide levels that may conflict with site use changes.

ASE does not recommend any subsurface environmental assessment activities related to on-site conditions at this time.

7.2 Off-Site

Based on the EDR report and our understanding of the local hydrogeology, the only off-site source that has a significant potential to impact the subject site is the offsite SPRR pipeline. The use of a petroleum distribution pipeline on the adjoining SPRR right-of-way represents a potential for hydrocarbon releases to the subject site, and is therefore a Recognized Environmental Concern.

ASE recommends a subsurface environmental assessment be performed in accordance with local agency guidelines to determine of any petroleum releases have occurred along the SPRR fuel pipeline.

8.0 REPORT LIMITATIONS

The findings and analysis contained in this Phase I Environmental Site Assessment report have been prepared by the professional staff of Aqua Science Engineers, Inc. (ASE) in accordance with generally accepted professional practices and from the guidance within the standard practice of ASTM E 1527-00.

Some of the information provided in this Phase I Environmental Site Assessment report is based upon personal interviews and research of available documents, records and maps held by appropriate government and private agencies. This is subject to the limitations of the historical documentation, availability and accuracy of pertinent records, and the recollection of those persons contacted and interviewed. The information contained in this report has received appropriate technical and peer review. The findings and analysis represent professional judgments and are based upon the investigations conducted and the review and interpretation of such data based on our experience and expertise according to the existing standard. No warranty or guarantee is expressed or implied. The scope of services within this Phase I Environmental Site Assessment did not include sample collection and/or analysis for hazardous materials. In addition, it did not include a property title search or evaluate asbestos, radon or seismic risk.

The findings and analysis set forth in this report are strictly limited in time and scope to the date of the evaluation(s), and for the sole use of our client.

9.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

Aqua Science Engineers, Inc. appreciates the opportunity to have prepared this Phase I Environmental Site Assessment for our client. Should any questions or comments arise, please feel free to call us at (925) 820-9391.

APPENDIX D

Statement of Qualifications

AQUA SCIENCE ENGINEERS, INC. PRINCIPAL STAFF

David Schultz, P.E., R.E.A.
President
B.S. Marine Biology, **U.C. Berkeley**, M.S. Civil Engineering, **U.C. Berkeley**
Registered Civil Engineer, CA #38738, CA Contractors License #487000, A, HAZ, C-57

Directs field operations for California from the Irvine office including hazardous waste management, assessments, remediation projects, construction, geologic investigations, engineering and regulatory compliance services.

Mr. Schultz has over 20 years experience in performing contaminated soil, groundwater and wastewater assessment and remediation services. Mr. Schultz has served as an expert witness in numerous contaminated property cases. Mr. Schultz also serves as Corporate Chief Engineer.

Gerald W. Sasse, R.E.A.
Chief Executive Officer
B.S. Business Management, **San Diego State University**, Certificate in Hazmat Transportation OSHA Compliance, Registered Environmental Assessor, California #06963

Manages operations of the corporate offices including administration, scheduling, cost accounting, marketing, and project management.

With over 25 years of hands-on experience, Mr. Sasse is uniquely qualified in the environmental field by way of the chemical industry. Having been the co-owner of a chemical manufacturing company, he is familiar with the financial, investigative, and remedial process involved in chemical site cleanups.

Michael Marello, R.G.
Vice President, Senior Geologist
B.S. Geology, **U.C. Davis**, Registered Geologist, California #5339, California Certified Hydrogeologist #628

Responsible for geoscience consulting and project management and implementation. With nearly 15 years in the industry, Mr. Marello coordinates projects ranging from surface spill investigations to aquifer analysis and remediation. He manages investigations involving soil and groundwater contamination at commercial and industrial sites. These investigations involve site histories, preparation of sampling programs in compliance with local municipalities, and installation of groundwater monitoring wells in order to

gain information regarding geologic conditions. Additionally, Mr. Marello designs site investigations, risk-based assessments, and remedial action plans.

AQUA SCIENCE ENGINEERS, INC. SENIOR STAFF

David Allen, R.E.A.
Senior Project Manager, Assessor
B.S. Industrial Technology, **San Jose State University**, Registered Environmental Assessor, California #06211

Responsible for coordinating Phase I and Phase II investigations involving the integration of ASE's engineering, geotechnical, drilling, and field-services departments. Manages risk-based assessment and remediation projects, on-going in-situ remediation projects, and industrial process engineering contracts.

Mr. Allen is also responsible for general content and report format for all ASE Phase I Environmental Site Assessments.

Robert E. Kitay, R.G., R.E.A.
Senior Project Geologist
B.A. Geology, **California State University, Sacramento**, Registered Geologist California #6586, Registered Environmental Assessor, California #05442

Mr. Kitay has over 11 years experience conducting environmental investigations at over 280 sites. Responsibilities include proposal and workplan preparation, monitoring and remedial well installations, geologic interpretations, and investigative/remedial report preparation. Acts as liason between clients and environmental agencies. Directs drilling operations for the region.

Valentin Constantinescu, R.E.A.
Project Geologist
MSc, Engineering, Geology, and Geophysics, **University of Bucharest, Romania,** AHERA Asbestos Inspector, California Cert. #2199, Registered Environmental Assessor, California, #05246

Responsible for Phase I Environmental Assessments which include performing site visits, agency file reviews, database searches, conducting interviews, and preparing reports. Mr. Constantinescu has also performed hundreds of environmental compliance investigations and assessments of soil and groundwater, including well design and installations, and report preparation.

APPENDIX E

Regulatory Agency/Information Source Documentation

Rick Widebrook, 116 College Avenue, San Francisco, CA 94112 415-452-0629

Title: **Geologist/Environmental Assessor**

Summary of Qualifications: Mr. Widebrook has over ten years of experience in the fields of geotechnical engineering and environmental consulting. Active in construction geology, engineering inspections, and environmental air, soil, and water monitoring. Responsible for conducting geotechnical investigations, Phase I and Phase II environmental site assessments, and Remedial Investigations/Feasibility Studies. Experienced in all phases of groundwater well installations, monitoring, and closure. Performs Tier-2&3 Risk-Based Corrective Action (RBCA) evaluations for fuel-impacted properties.

Academic Background: M.S. Environmental Management, University of San Francisco.
B.S. Geology, University of Missouri.

Publication: *A Comparison of Two Non-Point Source Pollution Control Programs in Santa Clara County, California.* University of San Francisco, 1995.

Registrations: Registered Geologist No. 6699.
Registered Environmental Assessor No. 6603.

Certifications: Nuclear Density Gauge Radiation Safety Training
OSHA 40 hour Hazardous Waste Operations / Emergency Response Training.

Professional Affiliations: Association of Engineering Geologists.
Peninsula Geological Society.

Professional Experience: Current Position: Independent Consultant in Geology, Environmental Geology, and Geotechnical Geology

1996 to 2000: Environmental Department Manager and Project Geologist: Smith-Emery Company, San Francisco, California
1992 to 1995, Staff Geologist: Smith-Emery Company, San Francisco, California
1990 to 1992: Staff Geologist: Soil Foundation Systems, Sunnyvale, California

Major Environmental Projects:

Phase I Environmental Assessments (Over 125 total)

Bay Area: San Francisco, Napa, Los Gatos, San Ramon, Fremont Woodland, San Leandro, Benicia Richmond, Alameda, and South San Francisco
U.S.A: Idaho, Illinois, Iowa, Indiana, Texas, Washington, West Virginia, Florida, Iowa, and Ohio.

Phase II Site Investigations and Tank Removals

Former Texaco Station: Groundwater Monitoring System, Sonoma, CA
Private Landfill & Industrial Facility: Site Characterization, Benicia, CA
Muni-Metro Turnback Project, Waterfront Characterization, San Francisco, CA
Hunters Point Naval Shipyard, Shipyard Industrial Site Characterization, SF, CA
Bobac Freight: Site Characterization & Risk-Based Site Assessment, Alameda, CA
Former Manufacturing Facility: 3-Tank Removal and Closure, San Leandro, CA
Former Chevron Station: Phase II Investigation, Alameda, CA

Advanced Environmental Projects

Tier-2 Risk-Based Corrective Action and Site Closure, San Francisco, CA
Storm Water Pollution Prevention Plan, Beale Air Force Base, Travis, CA
Fuller II Lodge, Phase I ESA, Phase II ESA, Remedial Investigation & Feasiblity Study, Site Remediation Workplan using Soil Washing & Immobilization of Lead Impacts

Excerpt from ASTM E-1527-00: Definition of Recognized Environmental Concern

Excerpted from:

ASTM E-1527-00, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. Published July 2000, American Society of Testing and Materials.

3. Terminology

3.3 Definition of terms specific to this standard:

3.3.31 recognized environmental conditions – the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water or the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not recognized environmental conditions.

The following agencies or organizations were contacted or visited, and information sources used regarding the subject property:

- California Regional Water Quality Control Board
- San Joaquin County Building Department
- City of Stockton Tax Collector's Department
- City of Stockton Public Library
- City of Stockton Fire Department
- City of Stockton Public Works Department
- EDR Environmental Data Reports
- Flood Insurance Rate Map, CPN 0602990295B
- UC Berkeley Online Historical USGS Topographic Map Collection.
- Alquist-Priolo Special Studies Zones Maps.
- "Phase I Environmental Site Assessment for the Vacant Land, Eight Mile Road, Stockton, CA 95241), by Northwest EnviroCon, Inc., dated March 1, 1995.

No other pertinent source was reviewed by Aqua Science Engineers, Inc. during this Phase I Environmental Site Assessment.

Anthony Lizzi, R.E.A.
Assessor, Project Geologist
B.S. Specialization Geology, **Concordia University Montreal, Canada**, Registered Environmental Assessor, California, #7000

Mr. Lizzi is responsible for implementation and supervision of projects associated with sire characterization, monitoring, and documenting site remediation. Mr. Lizzi has over 13 years experience in environmental geology including three years as a mining/structural geologist for two Canadian mining companies.

Mr. Lizzi has served as a Project Manager for and EPA Superfund Landfill site in Los Angeles from 1992 to 1996. Her performed multiphase site assessments as well as supervised the installation of vadose zone, leachate and groundwater monitoring wells for Superfund sites.

He has implemented many aquifer pump tests in Superfund and solid waste landfills. Also, he conducted detail surface and subsurface geological mapping in the mining industry.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc. (EDR). The report meets the government records search requirements of ASTM Standard Practice for Environmental Site Assessments, E 1527-00. Search distances are per ASTM standard or custom distances requested by the user.

EDR PROPRIETARY HISTORICAL DATABASES

Coal Gas	Former Manufactured Gas (Coal Gas) Sites

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Elevations have been determined from the USGS 1 degree Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. EDR's definition of a site with an elevation equal to the target property includes a tolerance of +/- 10 feet. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property (by more than 10 feet). Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

FEDERAL ASTM STANDARD

RCRIS: The Resource Conservation and Recovery Act database includes selected information on sites that generate, store, treat, or dispose of hazardous waste as defined by the Act. The source of this database is the U.S. EPA.

A review of the RCRIS-SQG list, as provided by EDR, and dated 06/10/2002 has revealed that there is 1 RCRIS-SQG site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Dist / Dir	Map ID	Page
TRI VALLEY GROWERS PLANT 4	***3200 E EIGHT MILE ROAD***	***1/8 - 1/4 NW***	***A1***	***6***

STATE ASTM STANDARD

CHMIRS: The California Hazardous Material Incident Report System contains information on reported hazardous material incidents, i.e., accidental releases or spills. The source is the California Office of Emergency Services.

A review of the CHMIRS list, as provided by EDR, and dated 12/31/1994 has revealed that there is 1 CHMIRS site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Dist / Dir	Map ID	Page
Not reported	3200 E. EIGHT MILE ROAD	1/8 - 1/4 NW	A2	6

CORTESE: This database identifies public drinking water wells with detectable levels of contamination, hazardous substance sites selected for remedial action, sites with known toxic material identified through the abandoned site assessment program, sites with USTs having a reportable release and all solid waste disposal facilities from which there is known migration. The source is the California Environmental Protection Agency/Office of Emergency Information.

A review of the Cortese list, as provided by EDR, has revealed that there are 2 Cortese sites within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Dist / Dir	Map ID	Page
STOCKTON/LODI KOA CAMP GR	2851 EIGHT MI	1/4 - 1/2 ENE	B4	8
PACIFIC BELL	***2300 EIGHT MILE RD***	***1/2 - 1 WNW***	***6***	***9***

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

A review of the LUST list, as provided by EDR, and dated 01/17/2002 has revealed that there is 1 LUST site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Dist / Dir	Map ID	Page
STOCKTON/LODI KOA CAMP GROUND	2851 EIGHT MILE RD	1/4 - 1/2 ENE	B5	8

EXECUTIVE SUMMARY

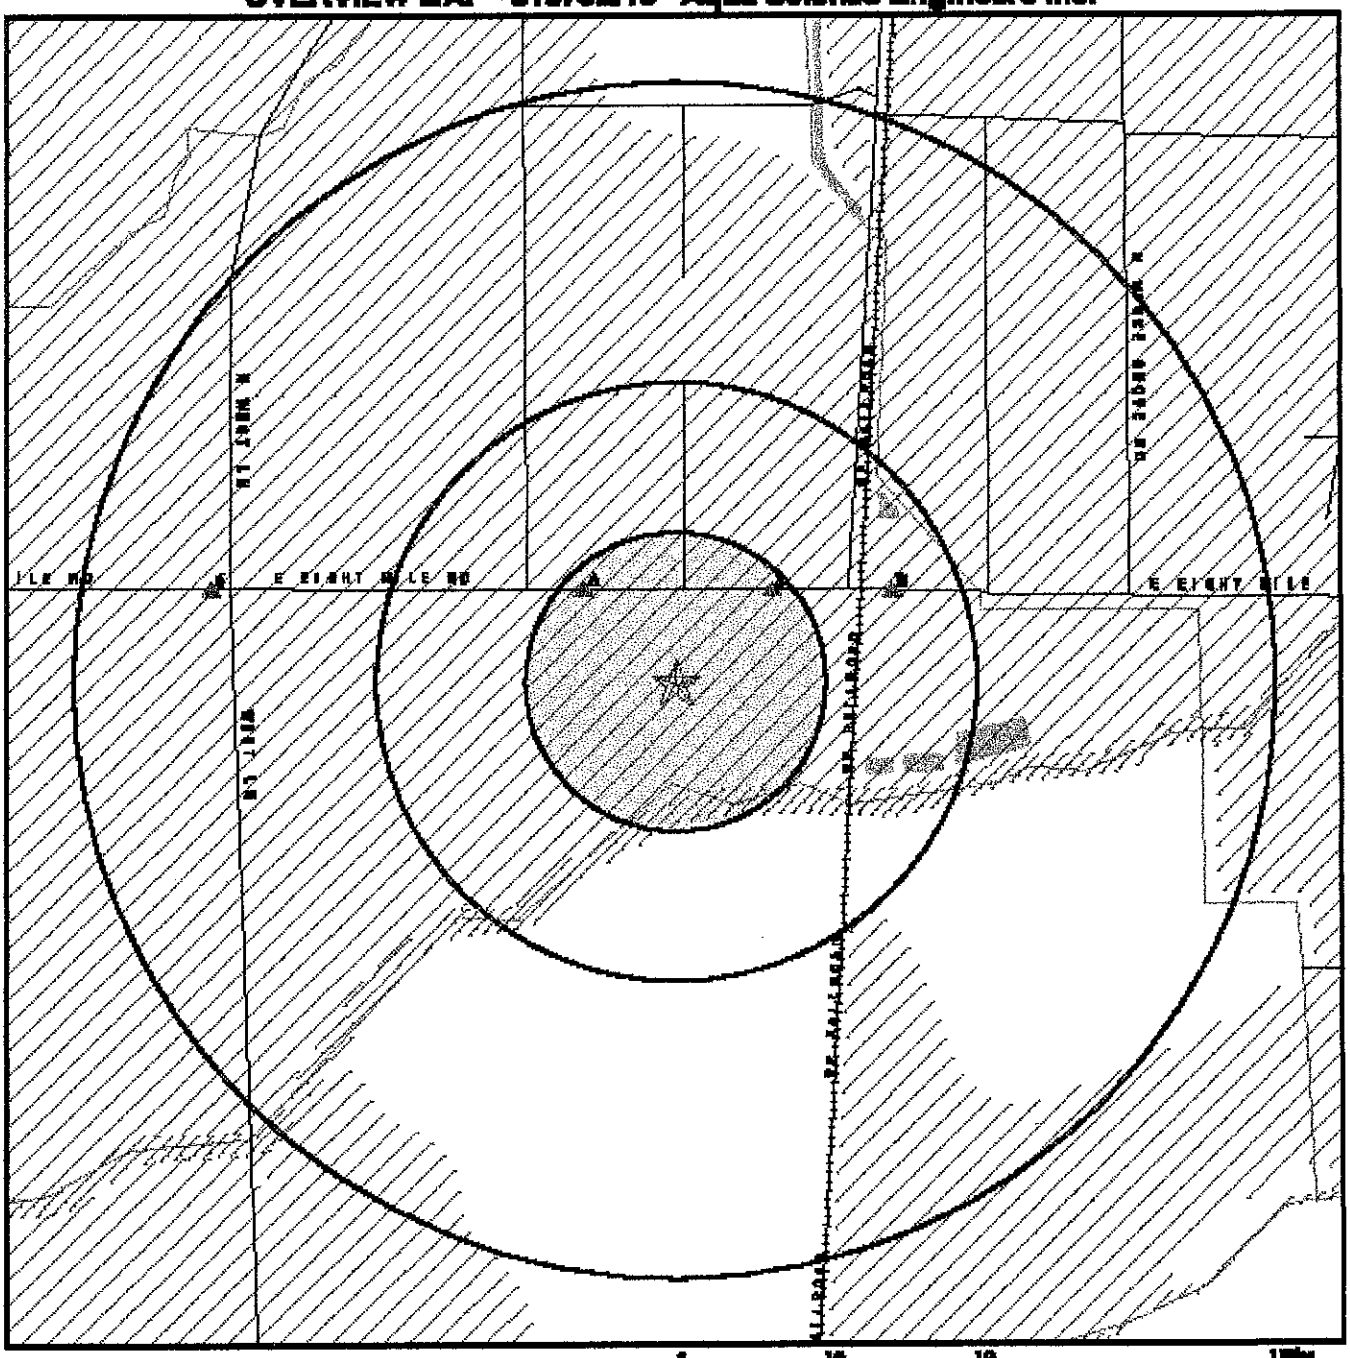
CA FID: The Facility Inventory Database contains active and inactive underground storage tank locations. The source is the State Water Resource Control Board.

A review of the CA FID UST list, as provided by EDR, has revealed that there is 1 CA FID UST site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Dist / Dir	Map ID	Page
TRI VALLEY GROWERS PLANT 4	*3200 E EIGHT MILE ROAD*	*1/8 - 1/4 NW*	*A1*	*6*

HIST UST: Historical UST Registered Database.

A review of the HIST UST list, as provided by EDR, and dated 10/15/1990 has revealed that there is 1 HIST UST site within approximately 0.25 miles of the target property.



Equal/Higher Elevation	Address	Dist / Dir	Map ID	Page

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Elapsed ASTM days: Provides confirmation that this EDR report meets or exceeds the 90-day updating requirement of the ASTM standard.

FEDERAL ASTM STANDARD RECORDS

NPL: National Priority List
Source: EPA
Telephone: N/A
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 04/22/02
Date Made Active at EDR: 06/21/02
Database Release Frequency: Semi-Annually

Date of Data Arrival at EDR: 05/06/02
Elapsed ASTM days: 46
Date of Last EDR Contact: 04/08/02

Elapsed ASTM days: 46
Date of Last EDR Contact: 05/06/02

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System
Source: EPA
Telephone: 703-413-0223
CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 02/12/02
Date Made Active at EDR: 06/03/02
Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 03/25/02
Elapsed ASTM days: 70
Date of Last EDR Contact: 06/24/02

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned
Source: EPA
Telephone: 703-413-0223
As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

Date of Data Arrival at EDR: 03/25/02
Elapsed ASTM days: 70
Date of Last EDR Contact: 06/24/02

CORRACTS: Corrective Action Report
Source: EPA
Telephone: 800-424-9346
CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 05/02/02
Date Made Active at EDR: 07/15/02
Database Release Frequency: Semi-Annually

Date of Data Arrival at EDR: 06/06/02
Elapsed ASTM days: 70
Date of Last EDR Contact: 06/10/02

RCRIS: Resource Conservation and Recovery Information System
Source: EPA/NTIS
Telephone: 800-424-9346
Resource Conservation and Recovery Information System. RCRIS includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

Date of Government Version: 06/10/02
Date Made Active at EDR: 07/15/02
Database Release Frequency: Varies

Date of Data Arrival at EDR: 06/21/02
Elapsed ASTM days: 25
Date of Last EDR Contact: 06/20/02

ERNS: Emergency Response Notification System
Source: EPA/NTIS
Telephone: 202-260-2342
Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 12/31/01
Date Made Active at EDR: 07/15/02
Database Release Frequency: Varies

Date of Data Arrival at EDR: 07/02/02
Elapsed ASTM days: 13
Date of Last EDR Contact: 04/29/02

FEDERAL ASTM SUPPLEMENTAL RECORDS

BRS: Biennial Reporting System
Source: EPA/NTIS
Telephone: 800-424-9346
The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

Date of Government Version: 12/31/99
Database Release Frequency: Biennially

Date of Last EDR Contact: 06/17/02
Date of Next Scheduled EDR Contact: 09/16/02

CONSENT: Superfund (CERCLA) Consent Decrees
Source: EPA Regional Offices
Telephone: Varies
Major legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites. Released periodically by United States District Courts after settlement by parties to litigation matters.

Date of Government Version: N/A
Database Release Frequency: Varies

Date of Last EDR Contact: N/A
Date of Next Scheduled EDR Contact: N/A

ROD: Records Of Decision
Source: EPA
Telephone: 703-416-0223
Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Date of Government Version: 09/30/01
Database Release Frequency: Annually

Date of Last EDR Contact: 07/09/02
Date of Next Scheduled EDR Contact: 10/07/02

DELISTED NPL: National Priority List Deletions
Source: EPA
Telephone: N/A
The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/22/02
Database Release Frequency: Quarterly

Date of Last EDR Contact: 05/06/02
Date of Next Scheduled EDR Contact: 08/05/02

FINDS: Facility Index System/Facility Identification Initiative Program Summary Report
Source: EPA
Telephone: N/A
Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more data. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 03/21/02
Database Release Frequency: Quarterly

Date of Last EDR Contact: 07/08/02
Date of Next Scheduled EDR Contact: 10/07/02

HMIRS: Hazardous Materials Information Reporting System
Source: U.S. Department of Transportation
Telephone: 202-366-4555
Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to DOT.

Date of Government Version: 12/31/01
Database Release Frequency: Annually

Date of Last EDR Contact: 04/22/02
Date of Next Scheduled EDR Contact: 07/22/02

MLTS: Material Licensing Tracking System
Source: Nuclear Regulatory Commission
Telephone: 301-415-7169
MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and which are subject to NRC licensing requirements. To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 04/12/02
Database Release Frequency: Quarterly

Date of Last EDR Contact: 07/08/02
Date of Next Scheduled EDR Contact: 10/07/02

MINES: Mines Master Index File
Source: Department of Labor, Mine Safety and Health Administration
Telephone: 303-231-5959

Date of Government Version: 06/05/02
Database Release Frequency: Semi-Annually

Date of Last EDR Contact: 07/01/02
Date of Next Scheduled EDR Contact: 08/26/02

NPL LIENS: Federal Superfund Liens
Source: EPA
Telephone: 202-564-4267
Federal Superfund Liens. Under the authority granted the USEPA by the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner receives notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Date of Government Version: 10/15/91
Database Release Frequency: No Update Planned

Date of Last EDR Contact: 06/28/02
Date of Next Scheduled EDR Contact: 08/26/02

PADS: PCB Activity Database System
Source: EPA
Telephone: 202-564-3887
PCB Activity Database. PADS identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the EPA of such activities.

Date of Government Version: 03/01/02
Database Release Frequency: Annually

Date of Last EDR Contact: 05/14/02
Date of Next Scheduled EDR Contact: 08/12/02

RAATS: RCRA Administrative Action Tracking System
Source: EPA
Telephone: 202-564-4104
RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/95
Database Release Frequency: No Update Planned

Date of Last EDR Contact: 06/10/02
Date of Next Scheduled EDR Contact: 09/09/02

TRIS: Toxic Chemical Release Inventory System
Source: EPA
Telephone: 202-260-1531
Toxic Release Inventory System. TRIS identifies facilities which release toxic chemicals to the air, water and land in reportable quantities under SARA Title III Section 313.

Date of Government Version: 12/31/99
Database Release Frequency: Annually

Date of Last EDR Contact: 06/24/02
Date of Next Scheduled EDR Contact: 09/23/02

TSCA: Toxic Substances Control Act
Source: EPA
Telephone: 202-260-5521
Toxic Substances Control Act. TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site.

Date of Government Version: 12/31/98
Database Release Frequency: Every 4 Years

Date of Last EDR Contact: 06/10/02
Date of Next Scheduled EDR Contact: 09/09/02

FTTS INSP: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)
Source: EPA
Telephone: 202-564-2501

Date of Government Version: 01/14/02
Database Release Frequency: Quarterly

Date of Last EDR Contact: 07/03/02
Date of Next Scheduled EDR Contact: 09/23/02

FTTS: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)
Source: EPA/Office of Prevention, Pesticides and Toxic Substances
Telephone: 202-564-2501
FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act). To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 04/25/02
Database Release Frequency: Quarterly

Date of Last EDR Contact: 07/03/02
Date of Next Scheduled EDR Contact: 09/23/02

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

STATE OF CALIFORNIA ASTM STANDARD RECORDS

AWP: Annual Workplan Sites
Source: California Environmental Protection Agency
Telephone: 916-323-3400
Known Hazardous Waste Sites. California DTSC's Annual Workplan (AWP), formerly SEP, identifies known hazardous substance sites targeted for cleanup.

Date of Government Version: 11/06/00
Date Made Active at EDR: 03/02/01
Database Release Frequency: Annually
Date of Data Arrival at EDR: 01/31/01
Elapsed ASTM days: 30
Date of Last EDR Contact: 07/08/02

CAL-SITES: Calsites Database
Source: Department of Toxic Substance Control
Telephone: 916-323-3400
The Calsites database contains potential or confirmed hazardous substance release properties. In 1996, California EPA reevaluated and significantly reduced the number of sites in the Calsites database.

Date of Government Version: 10/01/00
Date Made Active at EDR: 11/22/00
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 10/20/00
Elapsed ASTM days: 23
Date of Last EDR Contact: 07/08/02

CHMIRS: California Hazardous Material Incident Report System
Source: Office of Emergency Services
Telephone: 916-845-8400
California Hazardous Material Incident Reporting System. CHMIRS contains information on reported hazardous material incidents (accidental releases or spills).

Date of Government Version: 12/31/94
Date Made Active at EDR: 04/24/95
Database Release Frequency: No Update Planned
Date of Data Arrival at EDR: 03/13/95
Elapsed ASTM days: 42
Date of Last EDR Contact: 06/26/02

CORTESE: "Cortese" Hazardous Waste & Substances Sites List
Source: CAL EPA/Office of Emergency Information
Telephone: 916-323-9100
The sites for the list are designated by the State Water Resource Control Board (LUST), the Integrated Waste Board (SWF/LS), and the Department of Toxic Substances Control (Cal-Sites).

Date of Government Version: 04/01/01
Date Made Active at EDR: 07/26/01
Database Release Frequency: Varies
Date of Data Arrival at EDR: 06/29/01
Elapsed ASTM days: 28
Date of Last EDR Contact: 04/30/02

NOTIFY 65: Proposition 65 Records
Source: State Water Resources Control Board
Telephone: 916-449-5845
Proposition 65 Notification Records. NOTIFY 65 contains facility notifications about any release which could impact drinking water and thereby expose the public to a potential health risk.

Date of Government Version: 10/21/93
Date Made Active at EDR: 11/19/93
Database Release Frequency: No Update Planned
Date of Data Arrival at EDR: 11/01/93
Elapsed ASTM days: 18
Date of Last EDR Contact: 04/22/02

TOXIC PITS: Toxic Pits Cleanup Act Sites
Source: State Water Resources Control Board
Telephone: 916-227-4364
Toxic PITS Cleanup Act Sites. TOXIC PITS identifies sites suspected of containing hazardous substances where cleanup has not yet been completed.

Date of Government Version: 07/01/95
Date Made Active at EDR: 09/26/95
Database Release Frequency: No Update Planned
Date of Data Arrival at EDR: 08/30/95
Elapsed ASTM days: 27
Date of Last EDR Contact: 06/06/02

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SWF/LF (SWIS): Solid Waste Information System
Source: Integrated Waste Management Board
Telephone: 916-341-6320
Active, Closed and Inactive Landfills. SWF/LF records typically contain an inventory of solid waste disposal facilities or landfills. These may be active or inactive facilities or open dumps that failed to meet RCRA Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 03/15/02
Date Made Active at EDR: 04/16/02
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 03/18/02
Elapsed ASTM days: 29
Date of Last EDR Contact: 06/17/02

WMUDS/SWAT: Waste Management Unit Database
Source: State Water Resources Control Board
Telephone: 916-227-4448
Waste Management Unit Database System. WMUDS is used by the State Water Resources Control Board staff and the Regional Water Quality Control Boards for program tracking and inventory of waste management units. WMUDS is composed of the following databases: Facility Information, Scheduled Inspections Information, Waste Management Unit Information, SWAT Program Information, SWAT Report Summary Information, SWAT Report Summary Data, Chapter 15 (formerly Subchapter 15) Information, Chapter 15 Monitoring Parameters, TPCA Program Information, RCRA Programs Information, Closure Information, and Interested Parties Information.

Date of Government Version: 04/01/00
Date Made Active at EDR: 05/10/00
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 04/10/00
Elapsed ASTM days: 30
Date of Last EDR Contact: 06/10/02

LUST: Leaking Underground Storage Tank Information System
Source: State Water Resources Control Board
Telephone: 916-341-5740
Leaking Underground Storage Tank Incident Reports. LUST records contain an inventory of reported leaking underground storage tank incidents. Not all states maintain these records, and the information stored varies by state.

Date of Government Version: 01/17/02
Date Made Active at EDR: 02/12/02
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 01/21/02
Elapsed ASTM days: 22
Date of Last EDR Contact: 07/09/02

CA BOND EXP. PLAN: Bond Expenditure Plan
Source: Department of Health Services
Telephone: 916-255-2118
Department of Health Services developed a site-specific expenditure plan as the basis for an appropriation of Hazardous Substance Cleanup Bond Act funds. It is not updated.

Date of Government Version: 01/01/89
Date Made Active at EDR: 05/02/94
Database Release Frequency: No Update Planned
Date of Data Arrival at EDR: 07/27/94
Elapsed ASTM days: 6
Date of Last EDR Contact: 05/31/94

CA UST:

UST: Active UST Facilities
Source: SWRCB
Telephone: 916-341-5700
Active UST facilities gathered from the local regulatory agencies

Date of Government Version: 01/17/02
Date Made Active at EDR: 02/12/02
Database Release Frequency: Semi-Annually
Date of Data Arrival at EDR: 01/21/02
Elapsed ASTM days: 22
Date of Last EDR Contact: 04/16/02

CA FID UST: Facility Inventory Database
Source: California Environmental Protection Agency
Telephone: 916-445-6532
The Facility Inventory Database (FID) contains a historical listing of active and inactive underground storage tank locations from the State Water Resource Control Board. Refer to local/county source for current data.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

HAZNET: Hazardous Waste Information System
Source: California Environmental Protection Agency
Telephone: 916-255-1136
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

EDR PROPRIETARY HISTORICAL DATABASES

Former Manufactured Gas (Coal Gas) Sites: The existence and location of Coal Gas sites is provided exclusively to EDR by Real Property Scan, Inc. ©Copyright 1993 Real Property Scan, Inc. For a technical description of the types of hazards which may be found at such sites, contact your EDR customer service representative.

Disclaimer Provided by Real Property Scan, Inc.

The information contained in this report has predominantly been obtained from publicly available sources produced by entities other than Real Property Scan. While reasonable steps have been taken to insure the accuracy of this report, Real Property Scan does not guarantee the accuracy of this report. Any liability on the part of Real Property Scan is strictly limited to a refund of the amount paid. No claim is made for the actual existence of toxins at any site. This report does not constitute a legal opinion.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines/Electrical Transmission Lines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines and electrical transmission lines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 from the U.S. Fish and Wildlife Service.

98-ACRE PARCEL
EIGHT MILE ROAD
STOCKTON, CA 95212

TARGET PROPERTY COORDINATES

Latitude (North):	38.055401 - 38° 3' 19.4"
Longitude (West):	121.262700 - 121° 16' 57.7"
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	650670.1
UTM Y (Meters):	4213148.0

EDR's GeoCheck Physical Setting Source Addendum has been developed to assist the environmental professional with the collection of physical setting source information in accordance with ASTM 1527-00, Section 7.2.3. Section 7.2.3 requires that a current USGS 7.5 Minute Topographic Map (or equivalent, such as the USGS Digital Elevation Model) be reviewed. It also requires that one or more additional physical setting sources be sought when (1) conditions have been identified in which hazardous substances or petroleum products are likely to migrate to or from the property, and (2) more information than is provided in the current USGS 7.5 Minute Topographic Map (or equivalent) is generally obtained, pursuant to local good commercial or customary practice, to assess the impact of migration of recognized environmental conditions in connection with the property. Such additional physical setting sources generally include information about the topographic, hydrologic, hydrogeologic, and geologic characteristics of a site, and wells in the area.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata. EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

USGS TOPOGRAPHIC MAP ASSOCIATED WITH THIS SITE

Target Property: 2438121-A3 LODI SOUTH, CA
Source: USGS 7.5 min quad index

GENERAL TOPOGRAPHIC GRADIENT AT TARGET PROPERTY

Target Property: General S5W

Source: General Topographic Gradient has been determined from the USGS 1 Degree Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
SAN JOAQUIN, CA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 06077C0295B / CBPP

Additional Panels in search area: 06077C0285B / CBPP

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
LODI SOUTH	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Site-Specific Hydrogeological Data*:
Search Radius: 2.0 miles
Status: Not found

AQUIFLOW®

Search Radius: 2.000 Miles.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

According to ASTM E 1527-00, Section 7.2.2, "one or more additional state or local sources of environmental records may be checked, in the discretion of the environmental professional, to enhance and supplement federal and state sources... Factors to consider in determining which local or additional state records, if any, should be checked include (1) whether they are reasonably ascertainable, (2) whether they are sufficiently useful, accurate, and complete in light of the objective of the records review (see 7.1.1), and (3) whether they are obtained, pursuant to local, good commercial or customary practice." One of the record sources listed in Section 7.2.2 is water well information. Water well information can be used to assist the environmental professional in assessing sources that may impact groundwater flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-260-2805

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-260-2805

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: In November 1971 the United States Geological Survey (USGS) implemented a national water resource information tracking system. This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on more than 900,000 wells, springs, and other sources of groundwater.

INTRODUCTION

Purpose and Scope

Environmental Science Services, Inc. (ESS, Inc.) completed a Phase 1 Environmental Site Assessment for the subject property listed as Assessors Parcel Number 092-020-03. The purpose of this inspection was to evaluate the property for evidence of potential soil and ground water contamination resulting from current and/or former site uses or activities. Mr. Guy Tomlinson authorized our work on February 25, 2004. This report has been prepared in accordance with the American Society of Testing and Materials (ASTM) *Standard E 1527-00 for Environmental Assessments*. Our scope of our work included the following:

1. A field reconnaissance of the subject property to look for visual evidence of surface and potential subsurface sources of contamination

2. A site inspection performed in the immediate vicinity of the property to identify businesses that may use, produce or store hazardous materials and/or generate hazardous waste

3. Personal and telephone interview with representative of various regulatory agencies and persons familiar with site history and current operations

4. Examination of aerial photographs of the property dating back to 1957, as well as review of historic USGS topographic maps, archived building records and/or Sanborn Map coverage of the property (as available), in order to develop a reasonable continuous minimum 50-year site history as required by the ASTM standard.

5. A literature-based discussion of the likelihood for radon to be problematic at the properties

6. An inquiry with the San Joaquin County Agricultural Commissioner's Office in regards to current and past pesticide and herbicide uses.

7. An evaluation of local and regional geological and groundwater conditions, including historical depths and flow direction

8. A discussion of potable water, wastewater and stormwater provisions for the properties

9. A review of federal, state and county regulatory agency lists indicating any known instances of hazardous materials contamination and registered underground and aboveground storage tanks (USTs/ASTs) on or near the properties.

10. Color photography of the properties.

Laboratory testing for hazardous materials in the soil and ground water beneath the properties was not a part of the scope of this assessment. Sampling for asbestos and lead-based paint was not a part of the scope of this investigation.

FINDINGS

Site Description

The subject property consists of one parcel of land APN # 092-020-03. The property currently exists as undeveloped land. The subject property is generally located South of the town of Lodi, North of Stockton, CA.

ESS, Inc. personnel completed the field investigation of the subject properties on March 8, 2004. As can be seen by the color photographs the subject property consists of undeveloped land. No crops or structures were identified during this inspection on the subject property.

We observed no stained or odoriferous soils on the property, nor did we observe any other hazmat-related items of concern such as steam cleaning equipment or an agricultural equipment staging or maintenance area. Additionally, the property appears relatively free of debris and we observed no unusual odors or stains on the subject property during our site visit.

No utility-owned pole-mounted electrical lines or transformers, high-voltage, tower-mounted electrical transmission lines, concrete pad-mounted electrical transformers or capacitors were observed on the subject property. One pad mounted transformer was observed on the property to the north. No staining was observed.

Site Inspection

The subject property is located within a predominantly agricultural area. Agricultural properties completely surround the subject property. West Lane bounds the west side of the subject property. A drainage ditch runs parallel to West Lane and the subject property. A Southern Pacific Railroad Spur is 1/8 mile to the west. An abandoned cannery exists beyond the railroad.

Site History

Site Agricultural History

ESS, Inc. personnel requested files from the San Joaquin County Agricultural Department in regards to the subject property. Per file review, no crops have been produced on the property in the past two years. Any pesticides and herbicides that may have been applied to the property or adjacent properties over the past two years would not have an adverse affect on the subject property.

Agricultural chemicals used today typically do not persist in site soils for more than one year when properly mixed and applied. As such, the modern chemicals are not usually a concern in an environmental site assessment if used and applied properly. We observed no obvious surficial evidence of chemical misuse during our field reconnaissance. If pesticide or herbicide use occurred prior to 2002, these would not have an adverse effect on the property due to their soil-half life. The soil half-life is a measure of the persistence of a pesticide in soil. Pesticides can be categorized on the basis of their half-life as non-persistent, degrading to half the original concentration in less than 30 days; moderately persistent, degrading to half the original concentration in 30 to 100 days; or persistent, taking longer than 100 days to degrade to half the original concentration.

Based on the pesticide and herbicide types, which may have been applied in the past, most can be classified as non-persistent. Agricultural chemicals used today typically do not persist in site soils for more than one year when properly mixed and applied. As such, the modern chemicals are not usually a concern in an environmental site assessment if used and applied properly. We observed no obvious surficial evidence of chemical misuse during our field reconnaissance.

Business Directions

Review of historical business directories did not indicate any businesses located on the subject property.

Sanborn Maps

We reviewed Sanborn Maps with coverage of the subject property area through Environmental Data Resources (EDR). Sanborn Maps are detailed drawings of site development, and were typically used by fire insurance companies to determine site fire insurability. No Sanborn Map coverage of the subject properties was available.

Topographic Maps Review

We reviewed historic U.S. Geologic Survey (USGS) topographic maps with coverage of the subject property and adjacent land areas. Maps dated 1947, 1953, 1968 and 1976 were available for our review; the maps are each discussed below. In summary, the review topographic maps reveal no noticeable changes on the subject property during the past 94 years.

1947 Map

The property is located South of the town of Lodi. Contour lines on the property indicate that the property is at an elevation of approximately 25 feet mean sea level. No buildings are depicted on the. property. Bear Creek is depicted to the West.

1955, 1968 and 1976 Maps

The subject property remained relatively unchanged from 1947. No noteworthy items were identified. Development in the area has been slow. Improvements to West Lane were noted.

In summary, each of the reviewed topographic maps reveals that the subject property is located in a relatively flat area of San Joaquin County. No evidence was observed on the topographic maps to suggest that the subject property were disturbed by human activities tycially mapped by the USGS, such as the following: quarrying; installation or removal of pits ponds or lagoons; occurrences of dredging or subsurface or surface mining; or, deposition of historically places, *USGS topographically mappable* quantities of imported fill materials. The maps also reveal that the subject property has a surface elevation of approximately +/- 25 feet mean sea level (MSL).

Aerial Photographic Review

ESS, Inc. obtained historic aerial photographs of the subject properties and general vicinity from Environmental Data Resources. Inc. (EDR). Photographs covering the years 1957, 1970, 1982 and 1993 were available for review; the results of our photographic review are discussed below by years.

1957 Air Photos
(Scale: 1"= 555')

The subject property and surrounding properties exist as agricultural fields.

1970 Air Photos
(Scale: 1"= 666')

The subject property remains unchanged from the 1957 photo.

1982 Air Photos
(Scale: 1"= 690')

This subject property looks much the same as it did in 1970. A few structures appear to the North. A commercial installation currently identified as SBC yard now exists to the Northeast.

1993 Air Photos
(Scale: 1"= 666')

This subject property appears unchanged from the 1982 photo. The photo also remains relatively the same as the property and surrounding properties exists today.

Hydrogeologic and Soil Conditions

Decisions affecting the mode, occurrence, quality and use of groundwater within the area must be based on knowledge of the geologic and hydrogeologic aspects of the study area and surrounding region.

The geology as it pertains to groundwater can be interpreted by examining the physiographic setting, geologic history, and the nature and water-bearing characteristics of the various geologic formations. Hydrogeology refers to such topics as the occurrence, movement, and recharge of groundwater. Each of these topics are discussed below.

The site is located within a long, narrow basin filled with as much as 13,000 vertical meters of Cretaceous, Tertiary and Quaternary marine and continental sediments. Shallow subsurface deposits in the valley generally consist of a heterogeneous mixture of clay, silt, sand, and gravel. The site is underlain by Quaternary alluvium named the Riverbank Formation and is composed of poorly sorted stream channel and flood plain deposits which include clay, silt, and sand layers with conglomerate lenses.

The subject property is located approximately 25 feet above sea mean level. The surrounding topography in the area is typically flat. This investigation did not conduct soil and water sampling via borings as in a Phase II site assessment, however, based on the San Joaquin County Flood Control Groundwater Map, dated spring 1998 and the United States Geological Survey 1401-a Groundwater Report and information obtained in recent reports of surrounding properties, the direction of groundwater flow is to the west/northwest with a depth of approximately 40 feet below ground surface.

Radon Potential

This discussion of the potential for radon exposure for the subject properties and vicinity is based on review of available scientific literature on the topic. Radon isotope-222 is a colorless, odorless, tasteless radioactive gas that is a natural decay product of uranium. Uranium and radon are present in varying amounts in rocks and soil, and radon is present in background concentrations in the atmosphere. Current evidence indicates that increased lung cancer risk is directly related to radon-decay products.

Radon potential of rocks and soils and indoor radon exposure levels in the United States are currently areas of intense research by governmental regulators as well as the geoscience and medical communities. At this time, the EPA has recommended an "action" level for indoor radon concentrations at or exceeding 4 pico-curies per liter of air (pCi/1).

The recently published *California Statewide Radon Survey Interim Results,* based on the EPA/State Department of Health Services State Radon Survey, predicts that only 3.% of homes in Sacramento County would exceed the EPA's recommended level of 4pCi/1. Additionally California ranks as the third lowest for percentage of homes exceeding 4 pCi/1 of the 33 states participating in the study.

Specific indoor radon information for the subject properties can only be obtained by testing the existing or future buildings on the property. EPA generically recommends that all owners test their homes and commercial buildings for radon. Site-specific geology, construction materials and methodologies, use characteristics of building occupants and the quality of construction can all affect indoor radon results. Based on the low percentage of homes predicted to exceed the EPA's recommended exposure level as described above the potential for radon concentrations exceeding 4pCi/1 at the subject property is estimated to be low.

Regional Groundwater

Groundwater elevations in the vicinity of the properties are estimated using depth-to-groundwater measurements as provided by EDR. Information provided by EDR and the Regional Water Quality Control Board estimate the depth to groundwater at +/-40 feet below ground surface.

Municipal Infrastructure

The subject property currently contains some natural means for stormwater runoff in the form of drainage swales and ditches. No local municipalities are present.

Agency Database Review

ESS, Inc. personnel has reviewed the following list regarding hazardous materials contamination on or near the subject properties that are prepared by the following agencies:

- United States Environmental Protection Agency (EPA)
- California Environmental Protection Agency (Cal-EPA)
- Cal-EPA Department of Toxic Substances Control (DTSC)
- Cal-EPA Office of Environmental Health Hazard Assessment (OEHHA)
- Cal-EPA Regional Water Quality Control Board (RWQCB)
- Cal-EPA Integrated Waste Management Board (CIWMB)
- California State Water Resources Control Board (SWRCB)
- California Department of Health Services (DHS)
- Cal-DHS Office of Drinking Water (ODW)
- California Division of Oil and Gas (DOG)
- Sacramento County Hazardous Materials Division

EDR Incorporated performed a search of the agency databases (EDR Radius Map with GeoCheck) using the ASTM search radii. In summary, EDR identified no confirmed, state or federal "Superfund" sites located on or within one mile of the subject property during review of the former DHS's *Bond Expenditure Plan*, the U.S. EPA's *National Priorities List* (*NPL* and the Cal-EPA's *Active Annual Workplan Sites* list. No potential federal Superfund sites were listed on or within one-half mile of the property during review of U.S. EPA's *Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS)* database. One adjacent property, Pac Bell, is listed in EPA *Resource Conservation and Recovery Act (RCRA) Small Generators or Emergency Response Notification System (ERNS)* database. No RCRA *Treatment, Storage and Disposal (TSD)* facilities are located on or within one-half mile of the subject property.

EDR's search of various state and county databases that are shown using the ASTM-designated search radii revealed one know contaminated site within one-half mile of the property. One LUST site was identified within a half-mile radius of the subject property. This site does not appear to pose a threat to the subject property.

CONCLUSIONS

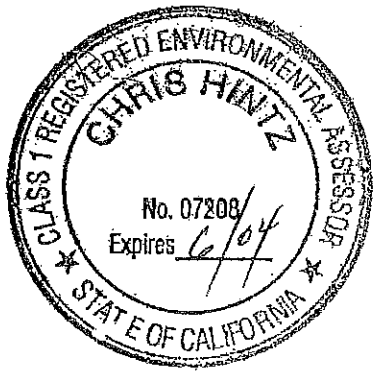
Our field reconnaissance and reviews of agency databases indicate no evidence of significant hazardous materials contamination on the surface of the subject property. We did not observe evidence of bulk storage or present usage of hazardous materials during our site visit. No adjacent properties appear to pose any adverse affect on the subject property. No state or federal "Superfund" sites were identified within a one-mile radius of the subject property. One LUST site was identified within a half-mile radius of the subject property. This site does not appear to pose a threat to the subject property. One Cortese site was identified within a ¼ mile radius. The well identified is on a site with known contamination. The site has had remedial plans in place and the case has since been closed.

Our field reconnaissance and review of agency records indicate no past use of pesticides in connection with the agricultural use of the property in the last two years. No evidence to warrant further investigation exists.

Our historic land use research dating back to the early 1950s, which included reviews of topographic maps, aerial photography and other historical archives, reveals that the subject property has been used for some production of various crops in the past. The surrounding areas have seen similar cultivation activities and uses. The subject property has no known history of having contained underground fuel tanks, sumps or oil/water separators.

We identified no known *regional* hazardous material impairments to groundwater quality beneath or within one-half mile of the subject property (One Cortese site was identified within a ¼ mile radius. The well identified is on a site with known contamination. The site has had remedial plans in place and the cases have since been closed). Based on this finding, the outcome of our regulatory agency database review, and the innocuous agricultural history of the property as described above, we do not believe that additional assessment of the subject property for hazardous material in ground water is necessary.

In summary, ESS, Inc. has performed this Phase 1 Environmental Site Assessment for Western States Land LLC in conformance with the scope and limitations of ASTM Standard Practice E 1527-00. This Assessment has revealed no evidence of Recognized Environmental Conditions in connection with the subject properties. Further sub-surface investigations do not appear to be warranted.



LIMITATIONS

The statement and conclusions in this report are based upon the scope of work described above and on observations made on the date of our site investigation, March 8, 2004. Our work was performed using a degree of skill consistent with that of competent environmental consulting firms performing similar work in the area, and we have attempted to obtain as much information regarding the property as possible, given what we consider to be a reasonable amount of research. Additional research or receipt of information regarding the property that was not disclosed or available to ESS, Inc. personnel during this assessment may result in revision of our conclusions.

The conclusion in this report should be re-evaluated if site conditions change. No recommendation is made as to the suitability of the property for any purpose. The results of our assessment do not preclude the possibility that material currently, or in the future defined as hazardous are present on the property, nor do the results of our work guarantee the potability of ground water beneath the property. This report is applicable only to the investigated properties and should not be used for any other properties not listed by the APN numbers in this report. No warranty is expressed or implied.

Sincerely,

Environmental Science Services, Inc.

City Directory Abstract

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist professionals in evaluating potential liability on a target property resulting from past activities. ASTM E 1527-00, Section 7.3 on Historical Use Information, identifies the prior use requirements for a Phase I environmental site assessment. The ASTM standard requires a review of *reasonably ascertainable standard historical sources. Reasonably ascertainable means information that is publicly available, obtainable from a source with reasonable time and cost constraints, and practically reviewable.*

To meet the prior use requirements of ASTM E 1527-00, Section 7.3.4, the following *standard historical sources* may be used: aerial photographs, fire insurance maps, property tax files, land title records (although these cannot be the sole historical source consulted), topographic maps, city directories, building department records, or zoning/land use records. ASTM E 1527-00 requires *"All obvious uses of the property shall be identified from the present, back to the property's obvious first developed use, or back to 1940, whichever is earlier. This task requires reviewing only as many of the standard historical sources as are necessary, and that are reasonably ascertainable and likely to be useful."* (ASTM E 1527-00, Section 7.3.2, page 12.)

EDR's City Directory Abstract includes a search and abstract of available city directory data.

City Directories
City directories have been published for cities and towns across the U.S. since the 1700s. Originally a list of residents, the city directory developed into a sophisticated tool for locating individuals and businesses in a particular urban or suburban area. Twentieth century directories are generally divided into three sections: a business index, a list of resident names and addresses, and a street index. With each address, the directory lists the name of the resident or, if a business is operated from this address, the name and type of business (if unclear from the name). While city directory coverage is comprehensive for major cities, it may be spotty for rural areas and small towns. ASTM E 1527-00 specifies that a *"review of city directories (standard historical sources) at less than approximately five year intervals is not required by this practice." (ASTM E 1527-00, Section 7.3.2.1, page 12.)*

NAICS (North American Industry Classification System) Codes
NAICS is a unique, all-new system for classifying business establishments. Adopted in 1997 to replace the prior Standard Industry Classification (SIC) system, it is the system used by the statistical agencies of the United States. It is the first economic classification system to be constructed based on a single economic concept. To learn more about the background, the development and difference between NAICS and SIC, visit the following Census website: http://www.census.gov/epcd/www/naicsdev.htm.

Environmental Data Resources, Inc.
Historical Topographic Map Report

Environmental Data Resources, Inc.'s (EDR) Historical Topographic Map Report is designed to assist professionals in evaluating potential liability on a target property, and its surrounding area, resulting from past activities. ASTM E 1527-00, Section 7.3 on Historical Use Information, identifies the prior use requirements for a Phase I environmental site assessment. The ASTM standard requires a review of *reasonably ascertainable standard historical sources. Reasonably ascertainable is defined as information that is publicly available, obtainable from a source with reasonable time and cost constraints, and practically reviewable.*

To meet the prior use requirements of ASTM E 1527-00, Section 7.3.4, the following *standard historical sources* may be used: aerial photographs, city directories, fire insurance maps, topographic maps, property tax files, land title records (although these cannot be the sole historical source consulted), building department records, or zoning/and use records. ASTM E 1527-00 requires *"All obvious uses of the property shall be identified from the present, back to the property's obvious first developed use, or back to 1940, whichever is earlier. This task requires reviewing only as many of the standard historical sources as are necessary, and that are reasonably ascertainable and likely to be useful."* (ASTM E 1527-00, Section 7.3.2 page 12.)

EDR's Historical Topographic Map Report includes a search of available public and private color historical topographic map collections.

Topographic Maps
A topographic map (topo) is a color coded line-and-symbol representation of natural and selected artificial features plotted to a scale. Topos show the shape, elevation, and development of the terrain in precise detail by using contour lines and color coded symbols. Many features are shown by lines that may be straight, curved, solid, dashed, dotted, or in any combination. The colors of the lines usually indicate similar classes of information. For example, topographic contours (brown); lakes, streams, irrigation ditches, etc. (blue); land grids and important roads (red); secondary roads and trails, railroads, boundaries, etc. (black); and features that have been updated using aerial photography, but not field verified, such as disturbed land areas (e.g., gravel pits) and newly developed water bodies (purple).

For more than a century, the USGS has been creating and revising topographic maps for the entire country at a variety of scales. There are about 60,000 U.S. Geological Survey (USGS) produced topo maps covering the United States. Each map covers a specific quadrangle (quad) defined as a four-sided area bounded by latitude and longitude. Historical topographic maps are a valuable historical resource for documenting the prior use of a property and its surrounding area, and due to their frequent availability can be particularly helpful when other standard historical sources (such as city directories, fire insurance maps, or aerial photographs) are not reasonably ascertainable.

Environmental Data Resources, Inc.
Aerial Photography Print Service

Environmental Data Resources, Inc.'s (EDR) Aerial Photography Print Service is a screening tool designed to assist professionals in evaluating potential liability on a target property resulting from past activities. ASTM E 1527-00, Section 7.3 on Historical Use Information, identifies the prior use requirements for a Phase I environmental site assessment. The ASTM standard requires a review of *reasonably ascertainable standard historical sources. Reasonably ascertainable means information that is publicly available, obtainable from a source with reasonable time and cost constraints, and practically reviewable.*

To meet the prior use requirements of ASTM E 1527-00, Section 7.3.4, the following *standard historical sources* may be used: aerial photographs, fire insurance maps, property tax files, land title records (although these cannot be the sole historical source consulted), topographic maps, city directories, building department records, or zoning/land use records. ASTM E 1527-00 requires *"All obvious uses of the property shall be identified from the present, back to the property's obvious first developed use, or back to 1940, whichever is earlier. This task requires reviewing only as many of the standard historical sources as are necessary, and that are reasonably ascertainable and likely to be useful."* (ASTM E 1527-00, Section 7.3.2, page 12.)

Aerial Photographs

Aerial photographs are a valuable historical resource for documenting past land use and can be particularly helpful when other historical sources (such as city directories or fire insurance maps) are not reasonably ascertainable. The EDR Aerial Photograph Print Service includes a search of local aerial photograph collections flown by public and private agencies for the state of California. EDR's professional field-based researchers provide digitally reproduced historical aerial photographs at ten year intervals.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL ASTM STANDARD

RCRIS: Resource Conservation and Recovery Information System. RCRIS includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs): generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs): generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs): generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRIS-SQG list, as provided by EDR, and dated 01/12/2004 has revealed that there is 1 RCRIS-SQG site within approximately 0.25 miles of the target property.

STATE ASTM STANDARD

CORTESE: This database identifies public drinking water wells with detectable levels of contamination, hazardous substance sites selected for remedial action, sites with known toxic material identified through the abandoned site assessment program, sites with USTs having a reportable release and all solid waste disposal facilities from which there is known migration. The source is the California Environmental Protection Agency/Office of Emergency Information.

A review of the Cortese list, as provided by EDR, has revealed that there is 1 Cortese site within approximately 0.5 miles of the target property.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Elapsed ASTM days: Provides confirmation that this EDR report meets or exceeds the 90-day updating requirement of the ASTM standard.

FEDERAL ASTM STANDARD RECORDS

NPL: National Priority List
Source: EPA
Telephone: N/A
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 10/21/03
Date Made Active at EDR: 12/08/03
Database Release Frequency: Semi-Annually

Date of Data Arrival at EDR: 11/03/03
Elapsed ASTM days: 35
Date of Last EDR Contact: 02/06/04

Date of Last EDR Contact: 02/06/04

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System
Source: EPA
Telephone: 703-413-0223
CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 11/17/03
Date Made Active at EDR: 02/02/04
Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 12/22/03
Elapsed ASTM days: 42
Date of Last EDR Contact: 12/22/03

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned
Source: EPA
Telephone: 703-413-0223
As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

Date of Government Version: 11/17/03
Date Made Active at EDR: 02/02/04
Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 12/22/03
Elapsed ASTM days: 42
Date of Last EDR Contact: 12/22/03

CORRACTS: Corrective Action Report
Source: EPA
Telephone: 800-424-9346
CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 12/18/03
Date Made Active at EDR: 02/02/04
Database Release Frequency: Semi-Annually

Date of Data Arrival at EDR: 12/26/03
Elapsed ASTM days: 38
Date of Last EDR Contact: 12/08/03

RCRIS: Resource Conservation and Recovery Information System
Source: EPA
Telephone: 800-424-9346
Resource Conservation and Recovery Information System. RCRIS includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs): generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs): generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs): generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 01/12/04
Date Made Active at EDR: 02/10/04
Database Release Frequency: Varies

Date of Data Arrival at EDR: 01/19/04
Elapsed ASTM days: 22
Date of Last EDR Contact: 01/19/04

ERNS: Emergency Response Notification System
Source: National Response Center, United States Coast Guard
Telephone: 202-260-2342
Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 12/31/02
Date Made Active at EDR: 02/03/03
Database Release Frequency: Annually

Date of Data Arrival at EDR: 01/27/03
Elapsed ASTM days: 7

FEDERAL ASTM SUPPLEMENTAL RECORDS

BRS: Biennial Reporting System
Source: EPA/NTIS
Telephone: 800-424-9346
The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

Date of Government Version: 12/01/01
Database Release Frequency: Biennially

Date of Last EDR Contact: 12/16/03
Date of Next Scheduled EDR Contact: 03/15/04

CONSENT: Superfund (CERCLA) Consent Decrees
Source: EPA Regional Offices
Telephone: Varies
Major legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites. Released periodically by United States District Courts after settlement by parties to litigation matters.

Date of Government Version: N/A
Database Release Frequency: Varies

Date of Last EDR Contact: N/A
Date of Next Scheduled EDR Contact: N/A

ROD: Records Of Decision
Source: EPA
Telephone: 703-416-0223
Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

Date of Government Version: 07/09/03
Database Release Frequency: Annually

Date of Last EDR Contact: 01/06/04
Date of Next Scheduled EDR Contact: 04/05/04

DELISTED NPL: National Priority List Deletions
Source: EPA
Telephone: N/A
The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/21/03
Database Release Frequency: Quarterly

Date of Last EDR Contact: 02/06/04
Date of Next Scheduled EDR Contact: 05/01/04

FINDS: Facility Index System/Facility Identification Initiative Program Summary Report
Source: EPA
Telephone: N/A
Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

US BROWNFIELDS: A Listing of Brownfields Sites
Source: Environmental Protection Agency
Telephone: 202-566-2777
Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become BCRLF cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Date of Government Version: 07/15/03
Database Release Frequency: Semi-Annually

Date of Last EDR Contact: 12/17/03
Date of Next Scheduled EDR Contact: 03/15/04

RMP: Risk Management Plans
Source: Environmental Protection Agency
Telephone: 202-564-8600
When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System
Source: EPA
Telephone: 202-564-4104
RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/95
Database Release Frequency: No Update Planned

Date of Last EDR Contact: 12/08/03
Date of Next Scheduled EDR Contact: 03/08/04

TRIS: Toxic Chemical Release Inventory System
Source: EPA
Telephone: 202-566-0250
Toxic Release Inventory System. TRIS identifies facilities which release toxic chemicals to the air, water and land in reportable quantities under SARA Title III Section 313.

Date of Government Version: 12/31/01
Database Release Frequency: Annually

Date of Last EDR Contact: 12/22/03
Date of Next Scheduled EDR Contact: 03/22/04

TSCA: Toxic Substances Control Act
Source: EPA
Telephone: 202-260-5521
Toxic Substances Control Act. TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site.

Date of Government Version: 12/31/02
Database Release Frequency: Every 4 Years

Date of Last EDR Contact: 12/08/03
Date of Next Scheduled EDR Contact: 03/08/04

FTTS INSP: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)

Date of Next Scheduled EDR Contact: 03/01/04

US BROWNFIELDS: A Listing of Brownfields Sites
Source: Environmental Protection Agency
Telephone: 202-566-2777
Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become BCRLF cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Date of Government Version: N/A

Date of Next Scheduled EDR Contact: N/A

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: PennWell Corporation
Telephone: (800) 823-6277
This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 from the U.S. Fish and Wildlife Service.

GEOCHECK®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

38 ACRES
10666 N. WEST LANE
STOCKTON, CA 95212

TARGET PROPERTY COORDINATES

Latitude (North):	38.055901 - 38° 3' 21.2"
Longitude (West):	121.294701 - 121° 17' 40.9"
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	649616.2
UTM Y (Meters):	4213184.0
Elevation:	30 ft. above sea level

EDR's GeoCheck Physical Setting Source Addendum has been developed to assist the environmental professional with the collection of physical setting source information in accordance with ASTM 1527-00, Section 7.2.3. Section 7.2.3 requires that a current USGS 7.5 Minute Topographic Map (or equivalent, such as the USGS Digital Elevation Model) be reviewed. It also requires that one or more additional physical setting sources be sought when (1) conditions have been identified in which hazardous substances or petroleum products are likely to migrate to or from the property, and (2) more information than is provided in the current USGS 7.5 Minute Topographic Map (or equivalent) is generally obtained, pursuant to local good commercial or customary practice, to assess the impact of migration of recognized environmental conditions in connection with the property. Such additional physical setting sources generally include information about the topographic, hydrologic, hydrogeologic, and geologic characteristics of a site, and wells in the area.

Assessment of the impact of contaminant migration generally has two principle investigative components:

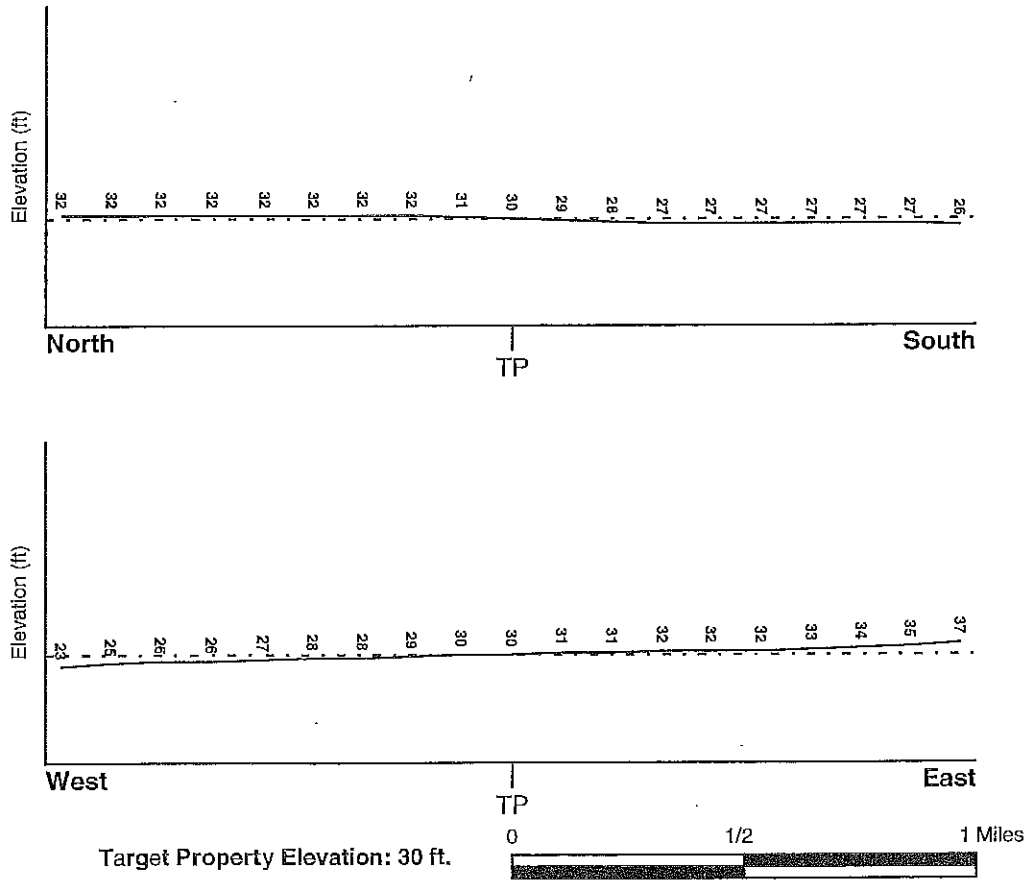
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata. EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

USGS Topographic Map:	38121-A3 LODI SOUTH, CA
General Topographic Gradient:	General SSW
Source:	USGS 7.5 min quad index

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
SAN JOAQUIN, CA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 0602990295B

Additional Panels in search area: 0602990285B
0602990285B

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
LODI SOUTH	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:
Search Radius: 1.25 miles
Status: Not found

Site-Specific Hydrogeological Data*:
Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site-specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: CLEAR LAKE

Soil Surface Texture: clay

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Not reported

Hydric Status: Soil meets the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: HIGH

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

Soil Layer Information

	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	13 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 0.20 Min: 0.06	Max: 8.40 Min: 6.10

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
2	13 inches	60 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 0.20 Min: 0.06	Max: 8.40 Min: 7.40

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
silty clay
clay loam
silty clay loam
fine sandy loam
silt loam
sandy loam

Surficial Soil Types:
silty clay
clay loam
silty clay loam
fine sandy loam
silt loam
sandy loam

Shallow Soil Types:
clay loam
indurated
silty clay loam
fine sandy loam
sandy clay loam

Deeper Soil Types:
silty clay loam
cemented
clay loam
loam
stratified
weathered bedrock

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

According to ASTM E 1527-00, Section 7.2.2, "one or more additional state or local sources of environmental records may be checked, in the discretion of the environmental professional, to enhance and supplement federal and state sources... Factors to consider in determining which local or additional state records, if any, should be checked include (1) whether they are reasonably ascertainable, (2) whether they are sufficiently useful, accurate, and complete in light of the objective of the records review (see 7.1.1), and (3) whether they are obtained, pursuant to local, good commercial or customary practice." One of the record sources listed in Section 7.2.2 is water well information. Water well information can be used to assist the environmental professional in assessing sources that may impact groundwater flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002. 7.5-Minute DEMs correspond to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

STATE RECORDS

California Drinking Water Quality Database
Source: Department of Health Services
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

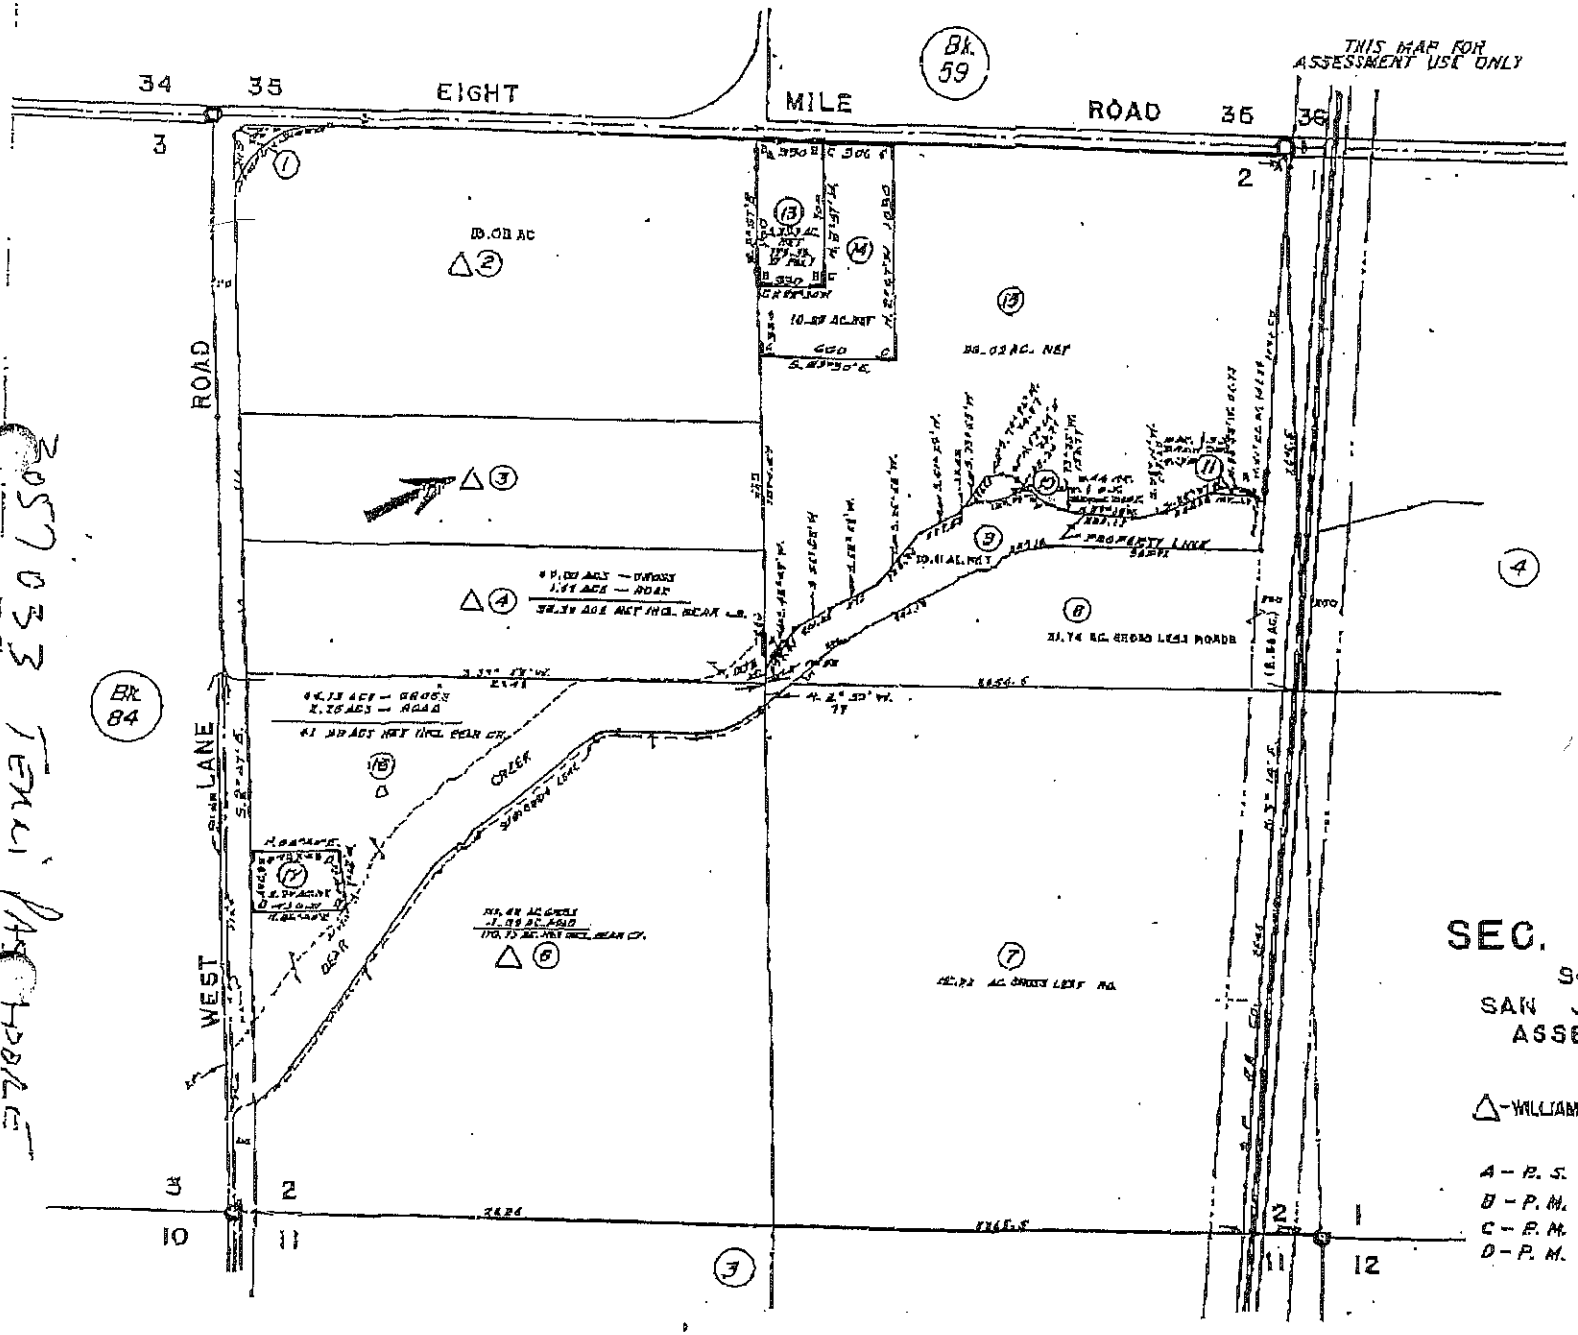
California Oil and Gas Well Locations for District 2, 3, 5 and 6
Source: Department of Conservation
Telephone: 916-323-1779

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.



OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

Attention: Mr. John Tomasello

SUBJECT: ENVIRONMENTAL SITE ASSESSMENT FOR REAL PROPERTY 10808 NORTH WEST LANE, STOCKTON, CALIFORNIA

Dear Mr. Tomasello:

Enclosed please find three copies of the above-referenced report in general accordance with ATC's proposal Number P91900 dated August 7, 2003. If you have any questions regarding this report, please call me at your convenience.

Sincerely yours,
ATC ASSOCIATES INC.

John Sellman

ENVIRONMENTAL SITE ASSESSMENT
FOR REAL PROPERTY LOCATED
10808 NORTH WEST LANE
STOCKTON, CALIFORNIA

1.0 INTRODUCTION

This report summarizes the results of an environmental site assessment (ESA) conducted of Real Property located at 10808 North West Lane in Stockton, California, the "site" (Figure 1). ATC Associates Inc. (ATC) conducted the assessment in response to a request by Mr. John Tomasello of Mill Creek Development (Client) and in accordance with Proposal P91900 dated August 7, 2003, between Mill Creek Development and ATC. The stated reason for conducting this site investigation is for a real estate transaction.

2.0 OBJECTIVE

The objective of this assessment was to identify Recognized Environmental Conditions (RECs) and certain environmental conditions outside the scope of ASTM Practice E 1527-00 associated with the site. The Phase I ESA was conducted in general accordance with the requirements of the American Society for Testing and Materials (ASTM) *Standard Practice for Environmental Site Assessments: Phase I for Environmental Site Assessments Process, Designation E 1527-00.*

3.0 SCOPE

The scope of services used to meet the objective was in general accordance with ASTM Standard E 1527-00. More specifically, the scope of services included review of the following readily available information sources:

- Task 1: Site and Site Vicinity Data
  - Discussions with personnel familiar with the site and review of site drawings;
  - A site reconnaissance to look for evidence of present and/or past operations that use or may have used potentially hazardous materials; and
  - A site vicinity reconnaissance to compile a list of companies and businesses in the immediate site vicinity that are reported to use, or appear to use or produce, hazardous substances that in our judgment may impact the site.

- Task 2: Historical Data

  - San Joaquin County Building, Planning, Environmental Health and Fire Department records regarding the site; and

  - Historical aerial photographs, topographic maps, city directories, and other published materials. The review was intended to provide information on historical land use as it relates to potential sources of hazardous waste (e.g., landfills, sumps, gas stations that are no longer present, or facility changes).

- Task 3: Agency Data

  For the site and a 1.00-mile radius of the site:

  - U.S. Environmental Protection Agency (USEPA) National Priorities List (NPL) database regarding Federal Superfund sites; and

  - California Environmental Protection Agency (CalEPA), Department of Toxic Substances Control (DTSC), Work Plan (AWP), and CalSites databases [formerly the Abandoned Sites Program Information System (ASPIS)].

  For the site and a 0.50-mile radius of the site:

  - EPA Resource Conservation and Recovery Information System (RCRIS), Resource Conservation and Recovery Act (RCRA) Treatment, Storage, and Disposal (TSD) facilities database;

  - Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) database;

  - California Regional Water Quality Control Board (RWQCB) database regarding leaking underground storage tanks (LUSTs); and

  - California Integrated Waste Management Board (IWMB) database information regarding active or abandoned landfills, proposed landfills, and transfer stations.

  For the site and a 0.25-mile radius of the site:

  - California Water Resources Control Board (CWRCB) database regarding registered underground storage tanks (USTs);

  - EPA RCRA Facilities and Generators databases; and

- California Division of Oil and Gas (CADOG) published information regarding present or past oil field activities.

For the site:

- EPA Emergency Response Notification Systems (ERNS) database.
- San Joaquin County Environmental Health Division files regarding hazardous materials and USTs;
- San Joaquin County Fire Department files regarding hazardous materials and USTs; and
- Information regarding the hydrogeology of the site and/or site vicinity using selected references.

- Task 4: Consideration of potential environmental conditions outside the scope of ASTM Practice E 1527-00:
  - Asbestos-containing material (ACM), including an opinion of the potential for ACM based on construction date of the property buildings and visual observations of the condition of suspect ACM.
  - Radon gas, including a review of published radon data with regard to the potential for elevated levels of radon gas.
  - Lead-based paint (LBP), including an opinion on the potential for LBP based on the construction date and use of the property buildings.
- Task 5: Data Evaluation, Report Compilation, and Management
  - After completion of Tasks 1 through 4, the data were evaluated and this report was prepared.

4.0 LIMITATIONS

Certain information contained in this report may have been rightfully provided to ATC Associates Inc. by third parties or other sources. ATC Associates Inc. does not make any warranties or representations, whether expressed or implied, regarding the accuracy of such information, and shall not be held accountable or responsible in the event that any inaccuracies are present. No limitations to data collection were encountered.

The term "hazardous substance" is used here in general accordance with its usage as defined in the document Comprehensive Environmental Response, Compensation, and

Liability Act (CERCLA) of 1980, as amended.

As specified in the ASTM Standard E 1527-00 "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process," the term REC is used to describe environmental conditions or impacts warranting further inquiry. A REC, according to ASTM, is defined as the presence or likely presence of any hazardous substances or petroleum products on site under conditions that indicate an existing release, a past release, or a material threat of release of hazardous substances or petroleum products into structures on the site or into the ground, groundwater, or surface water of the site. *De minimis* conditions are **not** considered RECs. A *de minimis* condition generally does not present a material risk of harm to public health or the environment and generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

In addition, environmental conditions that in the past would have been considered a REC, but which may or may not be considered a REC currently, are identified as Historical RECs (HRECs) in this report.

The terms "material," "waste," and "substances" are used interchangeably, and no legal distinction is implied between the terms as used herein. The words "impact" or "impacted" are used here to mean the effect or result of a release of a hazardous substance that could be judged an REC.

5.0 SITE REVIEW

The following terms are used in this report:

- "Site" refers to the property within the approximate boundaries shown in Figures 1 and 2 and described in Subsection 5.1;
- "Immediate site vicinity" refers to properties immediately adjacent to the site that share a common boundary with the site; and
- "Site vicinity" refers to the area within approximately a 1-mile radius of the site.

5.1 Site Setting

The immediate site vicinity legal descriptions on file at the San Joaquin County Assessor's office is APN 092-02-002. The site is currently zoned AU-20, as agricultural land in reserve for future urban development and will be re-designated as low density residential (R-L) according to the general plan by San Joaquin County. The listed address for the site is 10808 North West Lane, Stockton, California 95210. Ownership of the property is listed as North Perris Stockton Association at 24012 Calle De La Plata, Suite 405, Laguna Hills, California.

The site is comprised of approximately 83.08 acres (San Joaquin County Assessors Map, 2003) of agricultural land south of Eight Mile Road and east of West Lane, California (Figures 1 and 2).

5.2 Site and Site Vicinity Reconnaissance

5.2.1 Site Reconnaissance – Mr. John Sellman, Staff Geologist with ATC, conducted the site reconnaissance on August 28, 2003. Color photographs of the site and adjacent properties are presented in Site Photographs 1 through 12. At the time of the site reconnaissance, the weather was clear and warm with good visibility.

The sites address is 10808 North West Lane in Stockton, San Joaquin County, California. The site is currently in used for crop production. Currently the site is not provided utilities but if the site were annexed to the City of Stockton utilities would be provided by:

Water:	City of Stockton.
Sewer:	City of Stockton
Electricity:	Pacific Gas & Electric
Natural Gas:	Pacific Gas & Electric

The site consists of a rectangular-shaped parcel identified by APN 092-02-002 which borders the south side of Eight Mile Road and the east side of North West Lane. The parcel has no improvements and is utilized as agricultural land.

There was one irrigation well observed at the site. Next to this well was one engine which appeared to run the pump for the well which also contained one fuel tank. This tank is considered to be an AST. This engine was observed to be leaking oil onto the ground. About two square feet of soil appeared to be stained with leaking oil. This is interpreted to be a *de minimus condition*.

There were two portable tanks, one polyethylene tank and one steel tank, with unknown contents that were observed to be on the adjacent parcel to the south, near the southeast corner of the site. They were not observed to be leaking and since they were not on the site, they are not an environmental concern to the site.

According to the USGS 7.5" topographic map for Lodi South, California, dated 1968, photorevised 1976, the site is approximately 28 feet above mean sea level. The regional topography slopes to the southwest and site topography is relatively flat.

5.2.2 Storage Tanks - No visual evidence of underground storage tanks (USTs) was observed during the site visit. A review of the regulatory database report indicated no USTs currently or previously permitted at the property address

One above ground storage tank (AST) was observed in association with the well pump engine, at the site during the site visit.

5.2.3 Hazardous Substance Use/Storage – Several discarded tires were observed on the site (Site Photo 10). The tires should be collected and disposed of at a proper recycling facility.

According to the EDR Report contained in Appendix A, PG&E high voltage electrical power lines are known to transect the property. No overhead power lines were observed to transect the property during the site reconnaissance or on any aerial photographs. PG&E should be contacted to locate all pipelines prior to any construction activities conducted at the site, and any unused pipeline should be properly abandoned by PG&E.

5.2.4 Waste Generation, Storage, and Disposal – Evidence of waste generation was not observed at the site. However, a debris pile including several used tires and possible household type waste was observed along the northern edge of the site along Eight Mile Road. Also a discarded television was observed at the southwest corner of the site.

5.2.5 Septic Systems – Evidence of septic systems was not observed at the site.

5.2.6 Polychlorinated Biphenyls (PCBs) – Polychlorinated biphenyls (PCBs) are a toxic chemical component of dielectric fluids, coolants or lubricating oils used in many electrical transformers, light ballasts, capacitors or other similar equipment manufactured prior to 1979. The federal government categorizes PCB content in electrical equipment into three groups:

< 50 ppm	non-PCB unit
> 50 to < 500 ppm	PCB-contaminated unit
500 ppm and greater	PCB-transformer

One pad-mounted electrical transformer was observed during the site visit. The transformer is located on the southwest corner of the site. The transformer was observed to have approximately one-square foot stain on the concrete pad in front of the transformer. The soil in front of the concrete pad did not appear stained.

Pacific Gas and Electric Company (PG&E) owns the transformer and has informed ATC in past telephone interviews that they would take responsibility for any transformer oil release associated with their equipment. Because the transformer did not appear to be leaking, the soil around the transformer pad did not appear stained, and on the information obtained from PG&E, the transformer is not considered to present an environmental concern to the site.

5.2.7 Wells – One irrigation groundwater well is located on the eastern boundary of

the property. No other groundwater recharge wells, groundwater monitoring wells, or dry wells were observed or reported on the property. ATC recommends that the well be properly abandoned when its use is no longer required.

5.2.8 Non-ASTM Practice E 1527-00 Scope Items

The scope-of-work also included consideration of potential environmental conditions that are outside the scope of ASTM Practice E 1527-00.

Asbestos - – Asbestos containing materials were not present since no structures were observed at the site.

Radon – Radon is a naturally occurring colorless, odorless gas that is a by-product of the decay of radioactive materials potentially present in bedrock and soil. Radon gas may enter the lowest level of a building through floor cracks, structural joints, or plumbing conduits. The EPA guidance action level for annual residential exposure to radon is 4.0 Pico Curies per liter of air (pCi/L). The guidance action level is not a regulatory requirement for private owners of commercial real estate, but is commonly used for comparison purposes to suggest whether further action at a building may be prudent. Sampling and analysis of radon gas was not in the scope of this investigation. Only sampling and analysis of radon gas by a licensed radon inspector can determine the radon levels at the Site.

ATC's review of published U.S. EPA radon data provided by Environmental Data Resources, Inc (EDR), indicates the property is located in an area of moderate propensity with regard to the potential for elevated levels of radon gas. The Federal EPA Radon Zone maps place San Joaquin County in Zone 3 characterized by average levels below 2 pCi/L. One measurement reported by EDR for the same zip code place the average radon concentration in the vicinity as 2.70 pCi/L in first floor living areas. Based upon the information obtained from EDR, radon gas accumulation appears to represent a low environmental concern to the site at this time.

Lead Based Paint (LBP) – Lead-based paint was not present since no structures were observed at the site.

5.2.9 Site Vicinity Reconnaissance - A site vicinity reconnaissance was conducted by Mr. Sellman on August 28, 2003. The site vicinity was observed to consist primarily of agricultural and residential properties with two commercial properties to the north and two commercial properties to the east. More specifically, the following surrounding properties were observed on the day of the site visit (Figure 2):

North:	Eight Mile road followed by Mid Way Cabinet, Grayson Engineering, agricultural land and residences;
East:	Pacific Bell facility, Sam Freitas Trucking, and agricultural land;
South:	Agricultural land;

West: North West Lane followed by agricultural land.

No gasoline stations, manufacturing operations, or industrial sites were observed on the adjacent properties.

5.3 Hydrogeology

Geology – Stockton, California is located in the San Joaquin Valley, the southern extension of the California Great Central Valley (Figure 1). The Great Central Valley is a deep alluvial plain extending nearly 500 miles from the Siskiyou Range of the Cascade Mountains in the north to the Tehachapi Range to the south. At Stockton, the San Joaquin Valley is approximately 40 miles wide. The western Valley boundary consists of the low, rolling foothills of the California Coast Range Mountains (maximum elevation due west is less than 3,000 feet) and the eastern boundary consists of the more rugged foothills of the Sierra Nevada (maximum elevation due east is over 10,000 feet).

The Great Central Valley contains a thick sequence of sediment, which, in places, reaches a depth of 10 miles. These sediments range in geologic age from Jurassic (205 million years before present) to Recent (present time) and include both marine and continental deposits. The site's immediate subsurface geology consists of Pleistocene and Recent alluvial deposits. These alluvial deposits consist of heterogeneous sequences of sand and gravel originating from active stream channels, and silt and clay originating from overbank and marsh depositional environments.

Soil information provide in the EDR report indicate that the soils in the site vicinity consist of Clear Lake soils, which are composed of clays, and are characterized as having very slow infiltration rates, have a high water table, or are shallow to an impervious layer.

Hydrology – Regional groundwater depth is reported to be approximately 60 feet below grade and the inferred groundwater gradient is southwesterly based upon surface topography and stream flow directions (Department of Water Resources, 1998).

Actual local groundwater depth and flow direction can be influenced by additional factors such as underground structures, seasonal fluctuations, soil and bedrock geology, and production wells, none of which were considered during this study.

Evidence indicative of wetlands, such as hydrophilic vegetation and surface water sources was observed in the irrigation drainage canal located around the perimeter of the site. The Lodi South, California 7.5-minute topographic quadrangle identifies the canal as wetland areas on the southern boundary and southern half of the western boundary of the site. The topographic map also identifies a canal bisecting the site from east to west. Bear Creek is identified on the topographic map within one half mile southeast of the site. The EDR database report obtained for this site assessment does not identify the canal as wetlands.

6.0 HISTORICAL REVIEW

6.1 Prior Ownership and Use

ATC contacted the San Joaquin County Planning Department and San Joaquin County Building Department on August 28, 2003. San Joaquin County Planning Department counter personnel stated that APN 092-02-002 is assigned the address 10808 North West Lane. ATC attempted to review historical permits and building records for the addresses, but no records were available.

6.2 San Joaquin County Assessor's Office

According to information on file at the San Joaquin County Assessor's Office, the site has been assigned the APN 092-02-002, and is zoned AU-20 as agricultural land in reserve for future urban development. Under the general plan for the area, this property will be will be re-designated as low density residential (R-L). No historical permits and building records for the addresses were available for review.

6.3 Sanborn Fire Insurance Maps

A search for historical Sanborn Fire Insurance Maps for the site was conducted through EDR of Southport, Connecticut. No coverage was identified for the site (see Appendix A).

6.4 Aerial Photographs

Readily available aerial photographs to assess the historical land use and development of the site and site vicinity were reviewed at the San Joaquin County Surveyor Division, in Stockton, California. Aerial photographs dated 1940, 1952, 1963, 1975, and 1983 were available for review. Obvious indicators of potential sources of hazardous waste from land use, such as apparent aboveground tank areas, ponds, pits, sumps, landfills, and heavy industry or oil-field-related developments, were not observed at the site in the photographs reviewed.

The 1940 photograph depicts the site as farmland. The adjacent land to the north, east, west, and south is agricultural land.

The 1952 photograph shows the site as farmland. The adjacent property to the south, east, and west is agricultural land. The land to the north is agricultural land with homesteads.

The 1963 photograph also shows the site as farmland. The adjacent property to the south, east, and west is agricultural land. The land to the north is agricultural land with homesteads. A feature interpreted to be an irrigation ditch appears to bisect the

site from east to west and another feature interpreted to be an irrigation ditch lies along the southern site boundary.

The 1975 photograph depicts the site and vicinity similar to the 1963 photograph.

The 1983 aerial photograph depicts the site similar to the 1975 photograph. A parcel to the north of the site is shown to have commercial buildings. Two parcels to the east depict commercial buildings. The parcels to the south and west appear to be agricultural.

Copies of the aerial photographs from 1940, 1952, 1963, 1975, and 1983 are presented in the Figures section of this report as Aerial Photographs 1 through 6.

6.5 Topographic Map

The site is located on the USGS 7.5-minute series Lodi South topographic map, dated 1968, and photorevised 1976. The topographic map depicts the site as vacant property with the irrigation canal bisecting the property approximately east to west. Two wells appear on the topographic map, one near the eastern boundary of the site and one near the southeast corner of the site. The surrounding areas to the south, east, and west are shown as undeveloped land. Land to the north is shown as having residences and one commercial structure to the north and west.

6.6 Cross-Reference Directories

ATC reviewed Haines Criss-Cross Directories for the year 1977, 1987, 1997, and 2003 at the Cesar Chavez Central Library in Stockton, California. The 1977, 1987, 1997, and 2003 Haines Criss-Cross Directories listed had no listing for 10808 North West Lane. Midway Cabinet and Fixture was listed to the north of the site, the remaining entries were residential.

Polk Business Directories for the years 1955, 1965, 1975, 1982, 1991, and 2003 were also reviewed at the Cesar Chavez Central Library. Polk Business Directories had no listing for 10808 North West Lane any of the years reviewed. No listings were found for any of the adjacent properties to the north or south of the site until 2003. In 2003 the Polk Directory listed Midway Cabinets to the north of the site.

7.0 PREVIOUS REPORTS

One previous report was provided to ATC, entitled *Preacquisition Site Assessment Moss and Craig Developments Approximately 194 Acres on East Eight Mile Road and West Lane Stockton, California*, by Kleinfelder, Inc. dated May 1991. This report included the site and another parcel to the south in its descriptions. The site is described as the northern parcel in the report. The report recommended that the site be sampled for pesticides. This report is included in Appendix C.

8.0 AGENCY LIST REVIEW

To conduct some parts of the regulatory review for this environmental assessment, the services of EDR were used and their report was provided to ATC. Appendix A presents the report that was provided by EDR and is the basis for the following agency information.

In the following sections, only facilities that are located in the immediate site vicinity, or those that are located upgradient (but are not necessarily located near the site) are discussed. These facilities were selected based on the assumption that hazardous material released to the subsurface generally does not migrate laterally within the soil for a substantial distance, but that hazardous material can migrate in the groundwater in a generally downgradient direction; however, there are limitations to this interpretation.

8.1 Federal NPL Superfund Sites: Distance Searched – 1.00 mile

Federal NPL Superfund sites are facilities that have been assigned the highest priority for cleanup by EPA pursuant to the EPA Hazard Ranking System. According to the EDR report, the site is not listed and no NPL facilities are located within the search area.

8.2 Federal CERCLIS List: Distance Searched – 0.50 miles

The CERCLIS list is an EPA-maintained database of potential hazardous waste sites that have come to the attention of EPA, which discovers these sites through citizen reports, routine inspections of hazardous waste generators and treatment, storage, and disposal facilities, and reporting requirements. Sites on the CERCLIS list are not necessarily hazardous waste sites, but rather sites that EPA plans to investigate in the future or has already investigated. According to the EDR report, the site is not listed and no CERCLIS facilities are located within the search area.

8.3 EPA RCRA TSD Facilities List: Distance Searched - 0.50 miles

The RCRA TSD list is a database maintained by EPA for facilities at which treatment, storage and/or disposal of hazardous waste takes place, as defined and regulated by RCRA. According to the EDR report, the site is not listed and no RCRA TSD facilities are located within the search area.

8.4 EPA RCRA Generators List: Distance Searched - 0.25 miles

The RCRA generators list is a database maintained by EPA of those facilities, entities, or persons that generate hazardous waste as defined and regulated by RCRA. According to the EDR report, the site is not listed. According to the EDR report, the Pacific Bell facility located at 2300 East Eight Mile Road, located approximately one eighth mile west-north west of the site is listed on the RCRA Small Quantity Generator list. During the site investigation the location of the Pacific Bell facility was observed to be adjacent to the east and potentially upgradient from the site. This facility has no reported violations, so it's listing as a RCRA small quantity generator does not represent an environmental concern to the site.

8.5 EPA ERNS List: Distance Searched – Target Property

The ERNS list is the EPA list of reported CERCLA hazardous substance releases or spills in quantities greater than the reportable quantity, as maintained at the National Response Center. Notification requirements for such releases or spills are codified in 40 CFR Parts 302 and 355. According to the EDR report, the site is not listed in this database.

8.6 CalEPA, DTSC, and Cal-Sites List: Distance Searched - 1.00 mile

The Cal-Sites (formerly ASPIS) is a Cal-EPA-maintained database of active and inactive cases of the site evaluation and/or site survey programs. This database is used as a tracking system for present or former sites by Cal-EPA, including State Superfund facilities. According to the EDR report, the site is not listed and no Cal-Sites are located within the search area.

8.7 Landfills: Distance Searched - 0.50 miles

The California Integrated Waste Management Board (IWMB) maintains a list of active and inactive landfills and transfer stations in California. Generally, the California IWMB learns of locations of landfills through permit applications and from local enforcement agencies. According to the EDR report, the site is not listed and no landfills are located within the search area.

8.8 Underground Storage Tanks (USTs)

USTs can be sources of hazardous materials that could potentially impact the soil around the tanks and the underlying groundwater if leakage of the contents of the tanks or associated piping were to occur.

8.8.1 Permitted USTs: Distance Searched – 0.25 miles - The California Water Resources Control Board (CWRCB) maintains a list regarding registered USTs in the State of California. According to the EDR report, the site is not listed. According to the EDR report, the Pacific Bell (UE-708) Stkn CA facility located at 2300 East Eight Mile Road, located approximately one eight mile west-north west of the site is listed on the CA FID UST list. During the site investigation the location of the Pacific Bell facility was observed to be adjacent to the east and potentially upgradient from the site. The site is listed as having an active UST. This facility is further discussed in Section 8.8.2.

8.8.2 UST Releases: Distance Searched - 0.50 miles - The California Regional Water Quality Control Board (RWQCB) maintains records of facilities currently involved in site assessment/mitigation resulting from reported spills or releases from USTs. According to the EDR report, the site is not listed. According to the database, one leaking UST (LUST) facility is located within the search radius.

The Pacific Bell facility located at 2300 East Eight Mile Road, located approximately one eight mile west-north west of the site is listed on the LUST, CA FID, and CORTESE databases. During the site investigation the location of the Pacific Bell facility was observed to be adjacent to the east and potentially upgradient from the site. This facility was reported to have had a release of gasoline which impacted soils only. The facility is further reported as having the affected soil excavated and disposed of in an approved location. This facility was granted a "No Further Action" status by the local oversight agency. Due to its status and reported removal of the affected soil this facility does not represent an environmental concern to the site.

Thirty-three Orphan sites are listed in the CA SLIC, HAZNET, SWF/LF, LUST, RCRIS-SQG, and FINDS databases. Orphans are sites that have inadequate addressing information to properly locate the sites by the EDR database report. A physical check of the locations reveals that only one orphan facility is located within one mile from the site and the remaining facilities are greater than one mile from the site and have a very low likelihood of having affected the site. This facility is listed on the HAZNET database and is greater than one half mile from the site. Due to the nature of the listing and distance from the site it does not represent an environmental concern to the site.

8.9 Oil and Gas: Distance Searched - 1.00 mile

According to oil and gas records and maps, no oil and/or gas production activity was reported to have occurred at the site. Three oil and/or gas wells were drilled north, and southwest of the site within the specified search distance. Two wells were drilled in 1962, to depths of 4,600 and 6,212 feet and one well was drilled in 1983 to a depth of 7,025 feet. All three wells were plugged and abandoned as dry holes.

8.10 Local Agencies: Distance Searched - Site

ATC issued a request to review file information maintained by the San Joaquin County Environmental Health Division (SJEHD).

8.10.1 San Joaquin County Environmental Health Department (SJEHD) – ATC contacted the SJEHD regarding the site. The SJEHD informed ATC that no files exist for the site.

9.0 DISCUSSION

9.1 On-Site Potential Sources

Review of historical resources indicates that the site has been undeveloped agricultural property from at least 1940 to present. Site use over that time period has been for crop production.

No visual evidence of underground storage tanks (USTs) was observed during the site visit. A review of the regulatory database report indicated no USTs currently or previously permitted at the property Address.

Several discarded tires were observed along the northern boundary of the site. The tires should be collected and disposed of at a proper recycling facility.

One pad-mounted electrical transformer was observed during the site visit. The transformer is located on the southwestern corner of the site. The transformer was observed to have approximately one-square foot stain on the concrete pad in front of the transformer. The soil in front of the concrete pad did not appear stained. Because the transformer did not appear to be leaking, the soil around the transformer pad did not appear stained, and on the information obtained from PG&E, the transformer is not considered to present an environmental concern to the site.

One irrigation groundwater well is located on the property on the east side of the site. The pump engine next to the well contained a fuel tank, interpreted to be an AST. The engine appeared to be leaking oil onto the ground, impacting approximately two square feet. This is interpreted to be a *de minimus condition*. ATC recommends that the well be properly abandoned when its use is no longer required.

Suspect ACMs or lead based paint were not present since no structures were observed at the site.

ATC's review the published U.S. EPA radon data for the area that indicates that the property is located in an area of low propensity with regard to the potential for elevated levels of radon gas. Based upon the published data, radon gas accumulation appears to represent a low environmental concern to the site at this time.

The site was not listed on environmentally related government databases searched for this ESA. In addition, ATC's review of local agency files did not indicate violations or environmental impairment at the site. Based on this assessment, it is our judgment that there is a low likelihood that current or historical activities conducted at the site have adversely impacted the site, and it is our judgment that these activities represent *de minimis* condition. Information pertaining to likelihood statements is presented in Appendix B.

9.2 Off-Site Potential Sources

Based on the location, distance, and nature of the off-site potential sources in the site vicinity, it is our judgment that there is a very low likelihood that potentially hazardous waste is present on or beneath the site due to these off-site potential sources of hazardous substances. It is our judgment that the off-site source would not constitute an REC.

10.0 CONCLUSIONS

Based on the information obtained during this assessment, current regulatory guidelines, and the judgment of ATC Associates Inc., the following conclusion has been drawn:

- ATC has performed a Phase I Environmental Site Assessment in conformance with the scope of work and limitations of ASTM Standard E 1527-00 for Real Property located at 10808 North West Land located in Stockton, California. The assessment has revealed no evidence of RECs in connection with the site. **However,** one *de minimis* condition was observed at the site, which in ATC's opinion have a low likelihood to have affected the site and recommendations are presented to investigate these conditions.

11.0 RECOMMENDATIONS

Based on the information obtained during this assessment, current regulatory guidelines, and the judgment of ATC Associates Inc., ATC presents the following recommendations to address potential environmental conditions at the property located at 10808 North West Lane in Stockton, California.

- ATC recommends the irrigation well should be abandon in accordance with local and state agency regulations when no longer in use, and prior to property development.
- ATC recommends the collection of soil matrix samples from the fields to evaluate the potential for elevated concentrations of pesticides or herbicides
- ATC recommends the oil stained soil near the irrigation well should be excavated and properly disposed of in accordance with local and state agency regulations.
- ATC recommends the abandoned tires along the northern boundary of the site should be removed from the site and disposed of in accordance with local and state agency regulations.

The judgments and conclusions described in this report pertain to the conditions judged to be present or applicable at the time the work was performed. Future conditions may differ from those described herein and this report is not intended for use in future evaluations of the site unless a consultant familiar with environmental assessments conducts an update. Use of this report is provided to Mill Creek Development for their exclusive use and shall be subject to the terms and conditions in the Proposal between Mill Creek Development and ATC Associates Inc. Any third party use of this report shall also be subject to the terms and conditions governing the work in the Proposal between Mill Creek Development and ATC Associates Inc. Any unauthorized release or misuse of this report shall be without risk or liability to ATC Associates Inc.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc. (EDR). The report meets the government records search requirements of ASTM Standard Practice for Environmental Site Assessments, E 1527-00. Search distances are per ASTM standard or custom distances requested by the user.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL ASTM STANDARD

RCRIS: The Resource Conservation and Recovery Act database includes selected information on sites that generate, store, treat, or dispose of hazardous waste as defined by the Act. The source of this database is the U.S. EPA.

A review of the RCRIS-SQG list, as provided by EDR, and dated 07/11/2003 has revealed that there is 1 RCRIS-SQG site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Dist / Dir	Map ID	Page
PACIFIC BELL	*2300 E EIGHT MILE ROAD*	*1/8 - 1/4 WNW*	*A1*	*6*

STATE ASTM STANDARD

CHMIRS: The California Hazardous Material Incident Report System contains information on reported hazardous material incidents, i.e., accidental releases or spills. The source is the California Office of Emergency Services.

A review of the CHMIRS list, as provided by EDR, and dated 12/31/2002 has revealed that there is 1 CHMIRS site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Dist / Dir	Map ID	Page
Not reported	3200 E. EIGHT MILE ROAD	1/2 - 1 E	4	9

CORTESE: This database identifies public drinking water wells with detectable levels of contamination, hazardous substance sites selected for remedial action, sites with known toxic material identified through the abandoned site assessment program, sites with USTs having a reportable release and all solid waste disposal facilities from which there is known migration. The source is the California Environmental Protection Agency/Office of Emergency Information.

A review of the Cortese list, as provided by EDR, has revealed that there is 1 Cortese site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Dist / Dir	Map ID	Page
PACIFIC BELL	*2300 EIGHT MILE RD*	*1/8 - 1/4 WNW*	*3*	*8*

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

A review of the LUST list, as provided by EDR, and dated 04/02/2003 has revealed that there is 1 LUST site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Dist / Dir	Map ID	Page
PACIFIC BELL	*2300 EIGHT MILE RD*	*1/8 - 1/4 WNW*	*3*	*8*

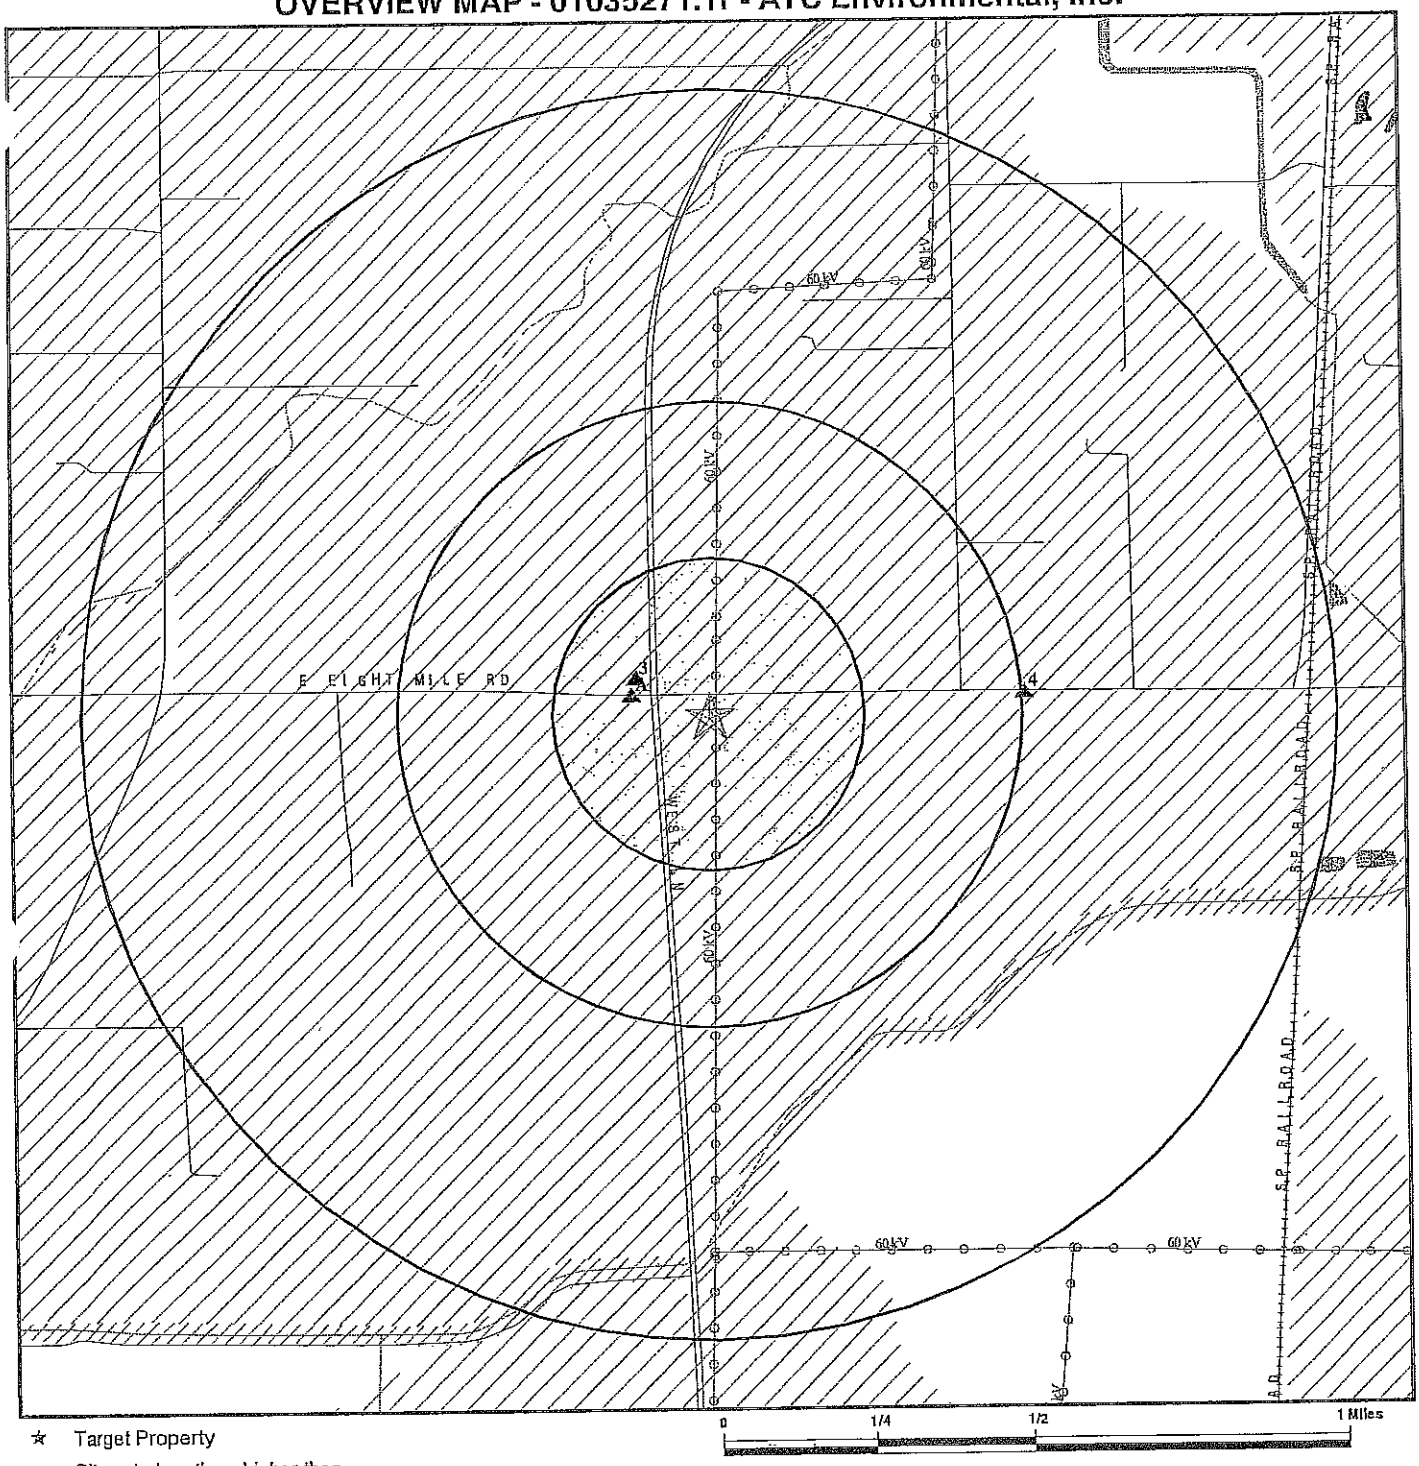
CA FID: The Facility Inventory Database contains active and inactive underground storage tank locations. The source is the State Water Resource Control Board.

A review of the CA FID UST list, as provided by EDR, has revealed that there is 1 CA FID UST site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Dist / Dir	Map ID	Page
PACIFIC BELL (UE-708) STKN CA	2300 E EIGHT MILE RD	1/8 - 1/4 WNW	A2	7

STATE OR LOCAL ASTM SUPPLEMENTAL

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency



A review of the HAZNET list, as provided by EDR, has revealed that there is 1 HAZNET site within approximately 0.25 miles of the target property.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Elapsed ASTM days: Provides confirmation that this EDR report meets or exceeds the 90-day updating requirement of the ASTM standard.

FEDERAL ASTM STANDARD RECORDS

NPL: National Priority List
Source: EPA
Telephone: N/A
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 04/30/03
Date Made Active at EDR: 06/02/03
Database Release Frequency: Semi-Annually

Date of Data Arrival at EDR: 05/05/03
Elapsed ASTM days: 28
Date of Last EDR Contact: 08/04/03

Date of Last EDR Contact: 08/04/03

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System
Source: EPA
Telephone: 703-413-0223
CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 06/16/03
Date Made Active at EDR: 08/01/03
Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 06/23/03
Elapsed ASTM days: 39
Date of Last EDR Contact: 06/23/03

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned
Source: EPA
Telephone: 703-413-0223
As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

Date of Government Version: 06/11/03
Date Made Active at EDR: 08/01/03
Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 06/23/03
Elapsed ASTM days: 39

CORRACTS: Corrective Action Report
Source: EPA
Telephone: 800-424-9346
CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 03/31/03
Date Made Active at EDR: 05/08/03
Database Release Frequency: Semi-Annually

Date of Data Arrival at EDR: 04/07/03
Elapsed ASTM days: 31
Date of Last EDR Contact: 06/09/03

RCRIS: Resource Conservation and Recovery Information System
Source: EPA/NTIS
Telephone: 800-424-9346
Resource Conservation and Recovery Information System. RCRIS includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

Date of Government Version: 07/11/03
Date Made Active at EDR: 08/18/03
Database Release Frequency: Varies

Date of Data Arrival at EDR: 07/30/03
Elapsed ASTM days: 19
Date of Last EDR Contact: 06/26/03

ERNS: Emergency Response Notification System
Source: National Response Center, United States Coast Guard
Telephone: 202-260-2342
Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 12/31/02
Date Made Active at EDR: 02/03/03
Database Release Frequency: Annually

Date of Data Arrival at EDR: 01/27/03
Elapsed ASTM days: 7
Date of Last EDR Contact: 07/28/03

FEDERAL ASTM SUPPLEMENTAL RECORDS

BRS: Biennial Reporting System
Source: EPA/NTIS
Telephone: 800-424-9346
The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

Date of Government Version: 12/31/99
Database Release Frequency: Biennially

Date of Last EDR Contact: 06/16/03
Date of Next Scheduled EDR Contact: 09/15/03

CONSENT: Superfund (CERCLA) Consent Decrees
Source: EPA Regional Offices
Telephone: Varies
Major legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites. Released periodically by United States District Courts after settlement by parties to litigation matters.

Date of Government Version: N/A
Database Release Frequency: Varies

Date of Last EDR Contact: N/A
Date of Next Scheduled EDR Contact: N/A

ROD: Records Of Decision
Source: EPA
Telephone: 703-416-0223
Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

Date of Government Version: 07/09/03
Database Release Frequency: Annually

Date of Last EDR Contact: 07/07/03
Date of Next Scheduled EDR Contact: 10/06/03

DELISTED NPL: National Priority List Deletions
Source: EPA
Telephone: N/A
The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/30/03
Database Release Frequency: Quarterly

Date of Last EDR Contact: 08/04/03
Date of Next Scheduled EDR Contact: 11/03/03

FINDS: Facility Index System/Facility Identification Initiative Program Summary Report
Source: EPA
Telephone: N/A
Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 07/25/03
Database Release Frequency: Quarterly

Date of Last EDR Contact: 07/02/03
Date of Next Scheduled EDR Contact: 10/06/03

HMIRS: Hazardous Materials Information Reporting System
Source: U.S. Department of Transportation
Telephone: 202-366-4555
Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to DOT.

Date of Government Version: 03/31/03
Database Release Frequency: Annually

Date of Last EDR Contact: 07/23/03
Date of Next Scheduled EDR Contact: 10/20/03

MLTS: Material Licensing Tracking System
Source: Nuclear Regulatory Commission
Telephone: 301-415-7169
MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and which are subject to NRC licensing requirements. To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 04/23/03
Database Release Frequency: Quarterly

Date of Last EDR Contact: 07/02/03
Date of Next Scheduled EDR Contact: 10/06/03

MINES: Mines Master Index File
Source: Department of Labor, Mine Safety and Health Administration
Telephone: 303-231-5959

Date of Government Version: 06/07/03
Database Release Frequency: Semi-Annually

Date of Last EDR Contact: 06/30/03
Date of Next Scheduled EDR Contact: 09/29/03

NPL LIENS: Federal Superfund Liens
Source: EPA
Telephone: 205-564-4267
Federal Superfund Liens. Under the authority granted the USEPA by the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner receives notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/91
Database Release Frequency: No Update Planned

Date of Last EDR Contact: 05/27/03
Date of Next Scheduled EDR Contact: 08/25/03

PADS: PCB Activity Database System
Source: EPA
Telephone: 202-564-3887
PCB Activity Database. PADS identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the EPA of such activities.

Date of Government Version: 03/26/03
Database Release Frequency: Annually

Date of Last EDR Contact: 08/13/03
Date of Next Scheduled EDR Contact: 11/10/03

DOD: Department of Defense Sites
Source: USGS
Telephone: 703-648-5920
This data set consists of federally owned or administered lands, administered by the Department of Defense, that have any area equal to or greater than 640 acres of the United States, Puerto Rico, and the U.S. Virgin Islands.

Date of Government Version: 04/01/03
Database Release Frequency: Semi-Annually

Date of Last EDR Contact: 08/15/03
Date of Next Scheduled EDR Contact: 11/10/03

RAATS: RCRA Administrative Action Tracking System
Source: EPA
Telephone: 202-564-4104
RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/95
Database Release Frequency: No Update Planned

Date of Last EDR Contact: 06/09/03
Date of Next Scheduled EDR Contact: 09/08/03

TRIS: Toxic Chemical Release Inventory System
Source: EPA
Telephone: 202-260-1531
Toxic Release Inventory System. TRIS identifies facilities which release toxic chemicals to the air, water and land in reportable quantities under SARA Title III Section 313.

Date of Government Version: 12/31/01
Database Release Frequency: Annually

Date of Last EDR Contact: 06/27/03
Date of Next Scheduled EDR Contact: 09/22/03

TSCA: Toxic Substances Control Act
Source: EPA
Telephone: 202-260-5521
Toxic Substances Control Act. TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site.

Date of Government Version: 12/31/98
Database Release Frequency: Every 4 Years

Date of Last EDR Contact: 06/09/03
Date of Next Scheduled EDR Contact: 09/08/03

FTTS INSP: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)
Source: EPA
Telephone: 202-564-2501

Date of Government Version: 04/15/03
Database Release Frequency: Quarterly

Date of Last EDR Contact: 06/23/03
Date of Next Scheduled EDR Contact: 09/22/03

SSTS: Section 7 Tracking Systems
Source: EPA
Telephone: 202-564-5008
Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 12/31/00
Database Release Frequency: Annually
Date of Last EDR Contact: 07/24/03
Date of Next Scheduled EDR Contact: 10/20/03

FTTS: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)
Source: EPA/Office of Prevention, Pesticides and Toxic Substances
Telephone: 202-564-2501
FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act). To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 04/15/03
Database Release Frequency: Quarterly
Date of Last EDR Contact: 06/23/03
Date of Next Scheduled EDR Contact: 09/22/03

Source: California Environmental Protection Agency
Telephone: 916-323-3400
Known Hazardous Waste Sites. California DTSC's Annual Workplan (AWP), formerly BEP, identifies known hazardous substance sites targeted for cleanup.

Date of Government Version: 06/30/03
Date Made Active at EDR: 07/18/03
Database Release Frequency: Annually
Date of Data Arrival at EDR: 07/07/03
Elapsed ASTM days: 11
Date of Last EDR Contact: 07/07/03

CAL-SITES: Calsites Database
Source: Department of Toxic Substance Control
Telephone: 916-323-3400
The Calsites database contains potential or confirmed hazardous substance release properties. In 1996, California EPA reevaluated and significantly reduced the number of sites in the Calsites database.

Date of Government Version: 04/28/03
Date Made Active at EDR: 06/23/03
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 06/02/03
Elapsed ASTM days: 21
Date of Last EDR Contact: 06/02/03

CHMIRS: California Hazardous Material Incident Report System
Source: Office of Emergency Services
Telephone: 916-845-8400
California Hazardous Material Incident Reporting System. CHMIRS contains information on reported hazardous material incidents (accidental releases or spills).

Date of Government Version: 12/31/02
Date Made Active at EDR: 08/07/03
Database Release Frequency: Varies
Date of Data Arrival at EDR: 07/11/03
Elapsed ASTM days: 27
Date of Last EDR Contact: 05/27/03

CORTESE: "Cortese" Hazardous Waste & Substances Sites List
Source: CAL EPA/Office of Emergency Information
Telephone: 916-323-9100
The sites for the list are designated by the State Water Resource Control Board (LUST), the Integrated Waste Board (SWF/LS), and the Department of Toxic Substances Control (Cal-Sites).

Date of Government Version: 04/01/01
Date Made Active at EDR: 07/26/01
Database Release Frequency: No Update Planned

Date of Data Arrival at EDR: 05/29/01
Elapsed ASTM days: 58
Date of Last EDR Contact: 07/28/03

NOTIFY 65: Proposition 65 Records
Source: State Water Resources Control Board
Telephone: 916-445-3846
Proposition 65 Notification Records. NOTIFY 65 contains facility notifications about any release which could impact drinking water and thereby expose the public to a potential health risk.

Date of Government Version: 10/21/93
Date Made Active at EDR: 11/19/93
Database Release Frequency: No Update Planned

Date of Data Arrival at EDR: 11/01/93
Elapsed ASTM days: 18
Date of Last EDR Contact: 07/23/03

TOXIC PITS: Toxic Pits Cleanup Act Sites
Source: State Water Resources Control Board
Telephone: 916-227-4364
Toxic PITS Cleanup Act Sites. TOXIC PITS identifies sites suspected of containing hazardous substances where cleanup has not yet been completed.

Date of Government Version: 07/01/95
Date Made Active at EDR: 09/26/95
Database Release Frequency: No Update Planned

Date of Data Arrival at EDR: 08/30/95
Elapsed ASTM days: 27
Date of Last EDR Contact: 08/04/03

SWF/LF (SWIS): Solid Waste Information System
Source: Integrated Waste Management Board
Telephone: 916-341-6320
Active, Closed and Inactive Landfills. SWF/LF records typically contain an inventory of solid waste disposal facilities or landfills. These may be active or inactive facilities or open dumps that failed to meet RCRA Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 06/13/03
Date Made Active at EDR: 07/07/03
Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 06/16/03
Elapsed ASTM days: 21
Date of Last EDR Contact: 06/16/03

WMUDS/SWAT: Waste Management Unit Database
Source: State Water Resources Control Board
Telephone: 916-227-4448
Waste Management Unit Database System. WMUDS is used by the State Water Resources Control Board staff and the Regional Water Quality Control Boards for program tracking and inventory of waste management units. WMUDS is composed of the following databases: Facility Information, Scheduled Inspections Information, Waste Management Unit Information, SWAT Program Information, SWAT Report Summary Information, SWAT Report Summary Data, Chapter 15 (formerly Subchapter 15) Information, Chapter 15 Monitoring Parameters, TPCA Program Information, RCRA Program Information, Closure Information, and Interested Parties Information.

Date of Government Version: 04/01/00
Date Made Active at EDR: 05/10/00
Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 04/10/00
Elapsed ASTM days: 30
Date of Last EDR Contact: 06/17/03

LUST: Leaking Underground Storage Tank Information System
Source: State Water Resources Control Board
Telephone: 916-341-5740
Leaking Underground Storage Tank Incident Reports. LUST records contain an inventory of reported leaking underground storage tank incidents. Not all states maintain these records, and the information stored varies by state.

Date of Government Version: 04/02/03
Date Made Active at EDR: 04/25/03
Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 04/16/03
Elapsed ASTM days: 9
Date of Last EDR Contact: 07/08/03

CA BOND EXP. PLAN: Bond Expenditure Plan
Source: Department of Health Services
Telephone: 916-255-2118
Department of Health Services developed a site-specific expenditure plan as the basis for an appropriation of Hazardous Substance Cleanup Bond Act funds. It is not updated.

Date of Government Version: 01/01/89
Date Made Active at EDR: 08/02/94
Database Release Frequency: No Update Planned

Date of Data Arrival at EDR: 07/27/94
Elapsed ASTM days: 6
Date of Last EDR Contact: 05/31/94

CA UST:

UST: Active UST Facilities
Source: SWRCB
Telephone: 916-341-5700
Active UST facilities gathered from the local regulatory agencies

Date of Government Version: 04/02/03
Date Made Active at EDR: 04/30/03
Database Release Frequency: Semi-Annually

Date of Data Arrival at EDR: 04/16/03
Elapsed ASTM days: 14
Date of Last EDR Contact: 07/08/03

VCP: Voluntary Cleanup Program Properties
Source: Department of Toxic Substances Control
Telephone: 916-323-3400
Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

Date of Government Version: 04/28/03
Date Made Active at EDR: 06/12/03
Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 06/02/03
Elapsed ASTM days: 10
Date of Last EDR Contact: 06/02/03

INDIAN UST: Underground Storage Tanks on Indian Land
Source: EPA Region 9
Telephone: 415-972-3368

Date Made Active at EDR: N/A
Database Release Frequency: Varies

Date of Data Arrival at EDR: N/A
Elapsed ASTM days: 0
Date of Last EDR Contact: N/A

CA FID UST: Facility Inventory Database
Source: California Environmental Protection Agency
Telephone: 916-445-6532
The Facility Inventory Database (FID) contains a historical listing of active and inactive underground storage tank locations from the State Water Resource Control Board. Refer to local/county source for current data.

Date of Government Version: 10/31/94
Date Made Active at EDR: 09/29/95
Database Release Frequency: No Update Planned

Date of Data Arrival at EDR: 09/05/95
Elapsed ASTM days: 24
Date of Last EDR Contact: 12/28/98

HIST UST: Hazardous Substance Storage Container Database
Source: State Water Resources Control Board
Telephone: 916-341-5700
The Hazardous Substance Storage Container Database is a historical listing of UST sites. Refer to local/county source for current data.

Date of Government Version: 10/15/90
Date Made Active at EDR: 02/12/91
Database Release Frequency: No Update Planned

Date of Data Arrival at EDR: 01/25/91
Elapsed ASTM days: 18
Date of Last EDR Contact: 07/26/01

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

STATE OF CALIFORNIA ASTM SUPPLEMENTAL RECORDS

AST: Aboveground Petroleum Storage Tank Facilities
Source: State Water Resources Control Board
Telephone: 916-341-5712
Registered Aboveground Storage Tanks.

Date of Government Version: 05/01/03
Database Release Frequency: Quarterly

Date of Last EDR Contact: 08/04/03
Date of Next Scheduled EDR Contact: 11/03/03

CLEANERS: Cleaner Facilities
Source: Department of Toxic Substance Control
Telephone: 916-225-0873
A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial; garment pressing and cleaner's agents; linen supply; coin-operated laundries and cleaning; drycleaning plants, except rugs; carpet and upholster cleaning; industrial launderers; laundry and garment services.

Date of Government Version: 03/11/03
Database Release Frequency: Annually

Date of Last EDR Contact: 07/02/03
Date of Next Scheduled EDR Contact: 10/06/03

CA WDS: Waste Discharge System
Source: State Water Resources Control Board
Telephone: 916-657-1571
Sites which have been issued waste discharge requirements.

Date of Government Version: 06/23/03
Database Release Frequency: Quarterly

Date of Last EDR Contact: 06/23/03
Date of Next Scheduled EDR Contact: 09/22/03

DEED: List of Deed Restrictions
Source: Department of Toxic Substances Control
Telephone: 916-323-3400
The use of recorded land use restrictions is one of the methods the DTSC uses to protect the public from unsafe exposures to hazardous substances and wastes.

Date of Government Version: 07/04/03
Database Release Frequency: Semi-Annually

Date of Last EDR Contact: 07/07/03
Date of Next Scheduled EDR Contact: 10/06/03

NFA: No Further Action Determination
Source: Department of Toxic Substances Control
Telephone: 916-323-3400
This category contains properties at which DTSC has made a clear determination that the property does not pose a problem to the environment or to public health.

Date of Government Version: 04/28/03
Database Release Frequency: Quarterly

Date of Last EDR Contact: 06/02/03
Date of Next Scheduled EDR Contact: 09/01/03

REF: Unconfirmed Properties Referred to Another Agency
Source: Department of Toxic Substances Control
Telephone: 916-323-3400
This category contains properties where contamination has not been confirmed and which were determined as not requiring direct DTSC Site Mitigation Program action or oversight. Accordingly, these sites have been referred to another state or local regulatory agency.

Date of Government Version: 04/28/03
Database Release Frequency: Quarterly

Date of Last EDR Contact: 06/02/03
Date of Next Scheduled EDR Contact: 09/01/03

SCH: School Property Evaluation Program
Source: Department of Toxic Substances Control
Telephone: 916-323-3400
This category contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the CalSites category depending on the level of threat to public health and safety or the environment they pose.

Date of Government Version: 04/28/03
Database Release Frequency: Quarterly

Date of Last EDR Contact: 06/02/03
Date of Next Scheduled EDR Contact: 09/01/03

NFE: Properties Needing Further Evaluation
Source: Department of Toxic Substances Control
Telephone: 916-323-3400
This category contains properties that are suspected of being contaminated. These are unconfirmed contaminated properties that need to be assessed using the PEA process. PEA in Progress indicates properties where DTSC is currently conducting a PEA. PEA Required indicates properties where DTSC has determined a PEA is required, but not currently underway.

Date of Government Version: 04/28/03
Database Release Frequency: Quarterly

Date of Last EDR Contact: 06/02/03
Date of Next Scheduled EDR Contact: 09/01/03

HAZNET: Hazardous Waste Information System
Source: California Environmental Protection Agency
Telephone: 916-255-1136
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

Date of Government Version: 12/31/01
Database Release Frequency: Annually

Date of Last EDR Contact: 08/12/03
Date of Next Scheduled EDR Contact: 11/10/03

Database Release Frequency: Quarterly

Date of Last EDR Contact: 07/07/03
Date of Next Scheduled EDR Contact: 10/06/03

LUST REG 6L: Leaking Underground Storage Tank Case Listing
Source: California Regional Water Quality Control Board Lahontan Region (6)
Telephone: 916-542-5424
For more current information, please refer to the State Water Resources Control Board's LUST database.

Date of Government Version: 06/09/03
Database Release Frequency: No Update Planned

Date of Last EDR Contact: 06/09/03
Date of Next Scheduled EDR Contact: 09/08/03

LUST REG 6V: Leaking Underground Storage Tank Case Listing
Source: California Regional Water Quality Control Board Victorville Branch Office (6)
Telephone: 760-346-7491

Date of Government Version: 05/29/03
Database Release Frequency: Quarterly

Date of Last EDR Contact: 07/02/03
Date of Next Scheduled EDR Contact: 10/06/03

LUST REG 7: Leaking Underground Storage Tank Case Listing
Source: California Regional Water Quality Control Board Colorado River Basin Region (7)
Telephone: 760-346-7491

Date of Government Version: 07/02/02
Database Release Frequency: Semi-Annually

Date of Last EDR Contact: 06/30/03
Date of Next Scheduled EDR Contact: 09/29/03

LUST REG 8: Leaking Underground Storage Tanks
Source: California Regional Water Quality Control Board Santa Ana Region (8)
Telephone: 909-782-4498
California Regional Water Quality Control Board Santa Ana Region (8). For more current information, please refer to the State Water Resources Control Board's LUST database.

Date of Government Version: 06/11/03
Database Release Frequency: No Update Planned

Date of Last EDR Contact: 08/11/03
Date of Next Scheduled EDR Contact: 11/10/03

LUST REG 9: Leaking Underground Storage Tank Report
Source: California Regional Water Quality Control Board San Diego Region (9)
Telephone: 858-467-2980
Orange, Riverside, San Diego counties. For more current information, please refer to the State Water Resources Control Board's LUST database.

Date of Government Version: 03/01/01
Database Release Frequency: No Update Planned

Date of Last EDR Contact: 07/23/03
Date of Next Scheduled EDR Contact: 10/20/03

California Regional Water Quality Control Board (RWQCB) SLIC Records

SLIC REG 1: Active Toxic Site Investigations
Source: California Regional Water Quality Control Board, North Coast Region (1)
Telephone: 707-576-2220

Date of Government Version: 04/03/03
Database Release Frequency: Semi-Annually

Date of Last EDR Contact: 05/27/03
Date of Next Scheduled EDR Contact: 08/25/03

SLIC REG 2: Spills, Leaks, Investigation & Cleanup Cost Recovery Listing
Source: Regional Water Quality Control Board San Francisco Bay Region (2)
Telephone: 510-286-0457
Any contaminated site that impacts groundwater or has the potential to impact groundwater.

Date of Government Version: 03/28/03
Database Release Frequency: Quarterly

Date of Last EDR Contact: 07/10/03
Date of Next Scheduled EDR Contact: 10/13/03

SLIC REG 3: Spills, Leaks, Investigation & Cleanup Cost Recovery Listing
Source: California Regional Water Quality Control Board Central Coast Region (3)
Telephone: 805-549-3147
Any contaminated site that impacts groundwater or has the potential to impact groundwater.

Date of Government Version: 05/19/03
Database Release Frequency: Semi-Annually

Date of Last EDR Contact: 08/18/03
Date of Next Scheduled EDR Contact: 11/17/03

SLIC REG 4: Spills, Leaks, Investigation & Cleanup Cost Recovery Listing
Source: Region Water Quality Control Board Los Angeles Region (4)
Telephone: 213-576-6600
Any contaminated site that impacts groundwater or has the potential to impact groundwater.

Date of Government Version: 07/01/03
Database Release Frequency: Quarterly

Date of Last EDR Contact: 07/28/03
Date of Next Scheduled EDR Contact: 10/27/03

SLIC REG 5: Spills, Leaks, Investigation & Cleanup Cost Recovery Listing
Source: Regional Water Quality Control Board Central Valley Region (5)
Telephone: 916-855-3075
Unregulated sites that impact groundwater or have the potential to impact groundwater.

Date of Government Version: 07/02/03
Database Release Frequency: Semi-Annually

Date of Last EDR Contact: 07/07/03
Date of Next Scheduled EDR Contact: 10/06/03

EDR PROPRIETARY HISTORICAL DATABASES

Former Manufactured Gas (Coal Gas) Sites: The existence and location of Coal Gas sites is provided exclusively to EDR by Real Property Scan, Inc. ©Copyright 1993 Real Property Scan, Inc. For a technical description of the types of hazards which may be found at such sites, contact your EDR customer service representative.

Disclaimer Provided by Real Property Scan, Inc.

The information contained in this report has predominantly been obtained from publicly available sources produced by entities other than Real Property Scan. While reasonable steps have been taken to insure the accuracy of this report, Real Property Scan does not guarantee the accuracy of this report. Any liability on the part of Real Property Scan is strictly limited to a refund of the amount paid. No claim is made for the actual existence of toxins at any site. This report does not constitute a legal opinion.

STATE OF CALIFORNIA BROWNFIELDS DATABASES RECORDS

VCP: Voluntary Cleanup Program Properties
Source: Department of Toxic Substances Control
Telephone: 916-323-3400
Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

Date of Government Version: 04/28/03
Database Release Frequency: Quarterly

Date of Last EDR Contact: 06/02/03
Date of Next Scheduled EDR Contact: 09/01/03

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: PennWell Corporation
Telephone: (800) 823-6277
This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 from the U.S. Fish and Wildlife Service.

GEOCHECK® - PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

MILL CREEK
EIGHT MILE ROAD/WEST LANE
STOCKTON, CA 95212

TARGET PROPERTY COORDINATES

Latitude (North):	38.056999 - 38° 3' 25.2"
Longitude (West):	121.294601 - 121° 17' 40.6"
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	649622.7
UTM Y (Meters):	4213306.5
Elevation:	31 ft. above sea level

EDR's GeoCheck Physical Setting Source Addendum has been developed to assist the environmental professional with the collection of physical setting source information in accordance with ASTM 1527-00, Section 7.2.3. Section 7.2.3 requires that a current USGS 7.5 Minute Topographic Map (or equivalent, such as the USGS Digital Elevation Model) be reviewed. It also requires that one or more additional physical setting sources be sought when (1) conditions have been identified in which hazardous substances or petroleum products are likely to migrate to or from the property, and (2) more information than is provided in the current USGS 7.5 Minute Topographic Map (or equivalent) is generally obtained, pursuant to local good commercial or customary practice, to assess the impact of migration of recognized environmental conditions in connection with the property. Such additional physical setting sources generally include information about the topographic, hydrologic, hydrogeologic, and geologic characteristics of a site, and wells in the area.

Assessment of the impact of contaminant migration generally has two principle investigative components:

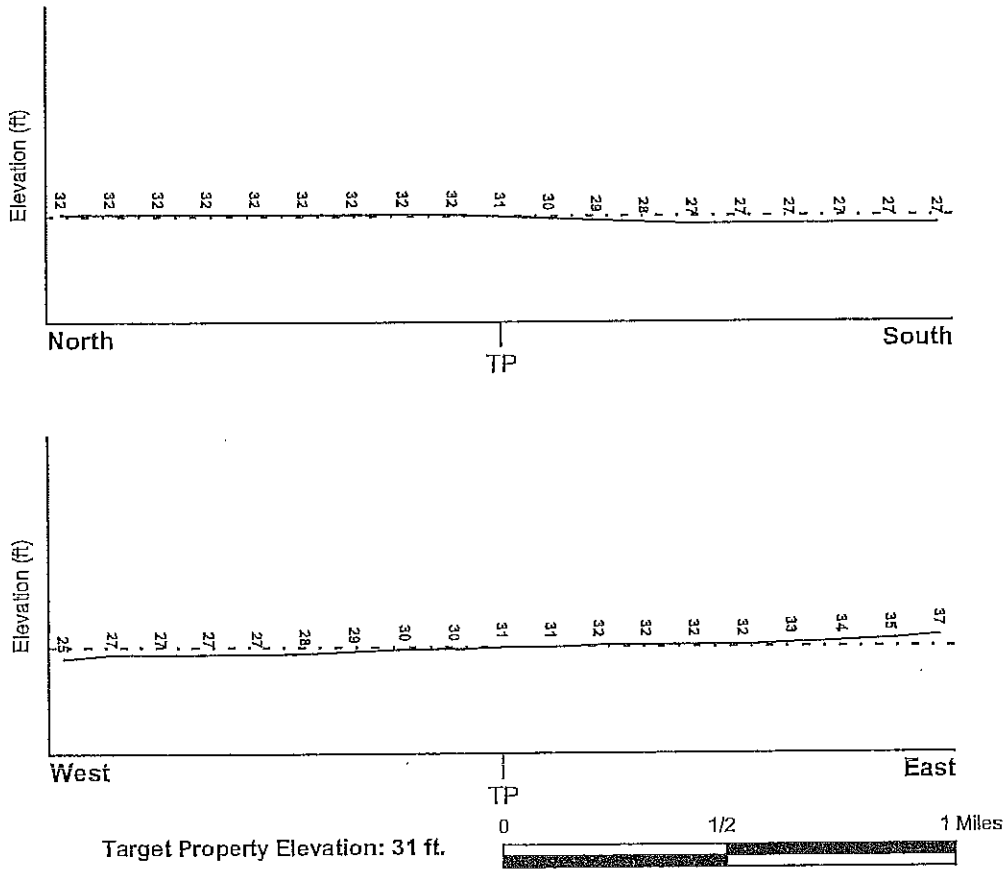
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata. EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

GEOCHECK - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

USGS Topographic Map:	2438121-A3 LODI SOUTH, CA
General Topographic Gradient:	General SSW
Source:	USGS 7.5 min quad index

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
SAN JOAQUIN, CA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property:	0602990295B
Additional Panels in search area:	0602990285B

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
LODI SOUTH	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data:*

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: CLEAR LAKE

Soil Surface Texture: clay

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Not reported

Hydric Status: Soil meets the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: HIGH

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

Soil Layer Information

	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	13 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 0.20 Min: 0.06	Max: 8.40 Min: 6.10

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
2	13 inches	60 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Sills and Clays (liquid limit 50% or more), Fat Clay.	Max: 0.20 Min: 0.06	Max: 8.40 Min: 7.40

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
silty clay
clay loam
silty clay loam
fine sandy loam
silt loam
sandy loam

Surficial Soil Types:
silty clay
clay loam
silty clay loam
fine sandy loam
silt loam
sandy loam

Shallow Soil Types:
clay loam
indurated
silty clay loam
fine sandy loam
sandy clay loam

Deeper Soil Types:
silty clay loam
cemented
clay loam
loam
stratified
weathered bedrock

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

According to ASTM E 1527-00, Section 7.2.2, "one or more additional state or local sources of environmental records may be checked, in the discretion of the environmental professional, to enhance and supplement federal and state sources... Factors to consider in determining which local or additional state records, if any, should be checked include (1) whether they are reasonably ascertainable, (2) whether they are sufficiently useful, accurate, and complete in light of the objective of the records review (see 7.1.1), and (3) whether they are obtained, pursuant to local, good commercial or customary practice." One of the record sources listed in Section 7.2.2 is water well information. Water well information can be used to assist the environmental professional in assessing sources that may impact groundwater flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002. 7.5-Minute DEMs correspond to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the national Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

STATE RECORDS

California Drinking Water Quality Database
Source: Department of Health Services
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations for District 2, 3, 5 and 6
Source: Department of Conservation
Telephone: 916-323-1779

RADON

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

APPENDIX B

LIKELIHOOD STATEMENTS

Many statements have been made in this report regarding the likelihood of the occurrence of certain adverse events. The term "likelihood," as used here, pertains to chances of a match between the prediction for the event and its actual occurrence. Likelihood statements are based on the professional judgments of ATC Associates Inc. A prediction made for the occurrence of an event will either match the actual occurrence or not. Uncertainty about the natural processes, lack of adequate scientific understanding of the physical and chemical interactions at the site, and insufficient data and information about the specific site conditions usually preclude a perfect or 100 percent likelihood of match between predictions and actual occurrences. Therefore, where a perfect match is not possible, the likelihood statement assigns a measure for a "degree of belief" or a "betting score" for the match between the prediction for the event and the actual event outcome.

The likelihood statements can be made either qualitatively, expressed verbally, or quantitatively, expressed in percent ranges. The qualitative terms expressed verbally, however, can be approximately related to percent ranges. The following approximate percent ranges have been used by ATC Associates Inc. for the qualitative terms used in likelihood statements.

QUALITATIVE TERMS	APPROXIMATE PERCENT RANGE
Very Low	Less than 10%
Low	10% to 20%
Low to Moderate	20% to 40%
Moderate	40% to 60%
Moderate to High	60% to 80%
High	80% to 90%
Very High	More than 90%

The following is a typical likelihood statement and its interpretation.

- **Statement**: Based on site conditions, data collected, and current regulatory guidelines delineating a hazardous waste, it is the judgment of ATC Associates Inc. that there is a low likelihood that hazardous waste from the landfill has migrated to the site.

- **Interpretation of Statement**: The statement reflects an extrapolation of a discrete data set to the entire site. This statement is made within the context of regulatory guidelines delineating hazardous wastes in effect at the time the statement is made. It is important to note that these guidelines periodically change; consequently, the judgment made corresponds to the guidelines cited in the report.

  An extrapolation made from a discrete data set precludes making a statement with certainty that the event has occurred (i.e., one cannot really say with 100 percent certainty that hazardous waste from the landfill has not migrated to the site). Therefore, a professional judgment is made for the event that is expressed in terms of the likelihood (less than 100 percent) that the event either has or has not occurred.

- The statement given above renders a professional judgment that there is a low likelihood that the event has occurred. The above statement could also have been expressed as "there is a high likelihood that hazardous waste from the landfill has not migrated to the site."

1 SUMMARY

Kleinfelder was retained by Moss and Craig Developments to conduct a preacquisition site assessment (PSA) of two parcels totaling approximately 194 acres south of East Eight Mile Road and east of West Lane in Stockton, California. The parcels are planned for development as commercial and/or residential land use. On the date of Kleinfelder's site visit, the parcels were used as agricultural land. The south parcel included a mobile home, grain bins, a warehouse, and two aboveground diesel storage tanks.

Stained soil was noted in three separate areas of the south parcel (inside the warehouse, near the grain bins, and on the north side of the warehouse). A petroleum hydrocarbon odor was noted in the affected soil. Kleinfelder recommends sampling aud analysis of the stained areas to evaluate the vertical and lateral extent of affected soil. Based on this assessment, cost effective remediation measures, if any, can be discussed.

Empty and partially full chemical containers were noted on the southern parcel. These containers and their contents should be properly disposed. A grain bin on the southern parcel was reportedly used to store empty pesticide containers before they were rinsed. Soil in this grain bin should be sampled and analyzed for persistent pesticide residues.

A Pacific Gas & Electric (PG&E) pad-mounted transformer was located on the north parcel. No obvious stains were noted on the transformer or on the pad. Four banks of pole-mounted transformers were noted on the north and south parcels; one of these transformers had a blue label indicating that it did not originally contain polychlorinated biphenyls (PCBs). Mr. Steve Okamoto of PG&E indicated that PG&E transformers should contain less than 500 ppm of PCBs. If the client desires additional information on the contents of unlabeled transformers, then PG&E should be contacted.

Two irrigation wells were noted on both parcels during the site visit. Mr. Leland Fortney, the caretaker for the south parcel, indicated that a domestic well near his mobile home had caved in. A second domestic well was present near the mobile home. Mr. Fortney indicated that a septic tank, located under the mobile home was abandoned and a new one had been installed nearby. If either of these septic tanks or the wells onsite will not be used in the future, they should be abandoned in accordance with SJCEHD requirements. If

Copyright 1991 Kleinfelder, Inc.

other wells are discovered during development of the site and will not be used in the future, then they should be abandoned in accordance with SJCEHD requirements.

The aerial photo review revealed that most of the site was agricultural land in the 1963, 1973, and 1984 photos. Two trailer-sized structures, a barn-sized structure and what appeared to be a silo were present on the southern parcel in the 1963, 1973, and 1984 photos. What may have been agricultural burn areas were noted on the southern parcel in the 1973 photos. If further information about these areas is desired, soil samples should be collected there and analyzed.

A review of federal, state, and county records indicated that there were no facilities onsite or within 2,600 feet of the site which were under enforcement action or investigation by environmental regulatory agencies.

Information on restricted pesticide use onsite from the San Joaquin County Agricultural Commissioner (SJCAC) was obtained for the years 1985 to 1989. Based on the pesticide use reports and agricultural history, if a further reduction in risk regarding residual pesticide soil concentrations is desired then soil sampling and analysis should be conducted.

Based on the information obtained and reviewed during this preacquisition site assessment Kleinfelder recommends additional assessment activities with regards to the stained soil and possible debris disposal/burn areas on the south parcel and possible surface soil sampling for persistent pesticides.

This report is subject to the limitations described in Section 5.

Copyright 1991 Kleinfelder, Inc.

2 BACKGROUND

On August 20, 1990, Moss and Craig Developments retained Kleinfelder to conduct a Preacquisition Site Assessment (PSA) of two parcels totaling approximately 194 acres (APN: 092-02-2 and 6) in Stockton, California. The northern parcel is referred to as the Bennett Property and the southern parcel is referred to as the Hammer Property. The two parcels as a whole are referred to as the site. The site is shown on Appendix A, Plate 1, the Site Location Map. The site is proposed for development as commercial and/or residential land uses.

This report includes Kleinfelder's review of available and accessible county, state, and federal agency records, historical aerial photographs, discussions with persons knowledgeable about the site (Ms. Jennifer Reich of Moss and Craig and Mr. Leland Fortney, the caretaker of the sonth parcel), and a site visit.

The federal regulatory agency record review included facilities listed by the Environmental Protection Agency (EPA). State agency records included the California Department of Health Services (DHS), Regional Water Quality Control Board (RWQCB), California Integrated Waste Management Board (CIWMB), Department of Water Resources (DWR), California State Office of Emergency Services (OES), and the Department of Conservation, Division of Oil and Gas (DOG). Local agency records included the San Joaquin County Department of Public Health Services, Environmental Health Division (SJCEHD), the San Joaquin County Air Pollutiou Control District (SJCAPCD), and the San Joaquin County Agriculture Commission (SJCAC).

The historical aerial photo review included a stereoscopic review of photos from 1963, 1973, and 1984. The site visit included a visual assessment of the site for obvious environmental concerns involving toxic chemicals and a drive-by survey of the area, within a 2,600 feet radius of the site. The drive-by survey was conducted to note facilities which may affect the site. This report presents our findings and discusses areas of concern.

Copyright 1991 Kleinfelder, Inc.

3 ASSESSMENT ACTIVITIES

3.1 INTRODUCTION

Regulatory agencies create files for sites where they have conducted investigations, enforcement actions, or inspections under their jurisdiction. Non-confidential portions of these files were reviewed to locate potential concerns near the site. A summary of the records available for regulatory agency investigations near the site is included in Section 3.2.

Historic aerial photographs were reviewed for additional information about past site and surrounding area activities that might not be available in agency files. A summary of the aerial photograph review is included in Section 3.3.

A site visit was conducted to assess current conditions and activities at the site and surrounding area. The results of the site visit are included in Section 3.4. The locations of offsite facilities discussed in section 3.0 are presented in Appendix A, Plate 2, the Site Vicinity Map. Features noted onsite during the site visit are presented in Appendix A, Plate 3, the Site Visit Map.

Available agency records are reviewed by Kleinfelder personnel. At times however, agency information is obtained verbally. Telephone Conversation Records and documentation of verbal information are contained in Appendix B.

3.2 RECORD REVIEW

A brief description of the agencies contacted, lists reviewed, and information obtained concerning the site and surrounding area is as follows:

The United States Environmental Protection Agency (EPA) *Comprehensive Environmental Response, Compensation, and Liability Information System* (CERCLIS) lists sites with known or threatened releases of hazardous chemicals. The *National Priority List* (NPL) is a list of sites scheduled for long-term remediation using federal superfund monies and/or

Copyright 1991 Kleinfelder, Inc.

private funds. No facilities within one mile of the site were listed on the CERCLIS database (February 1990) or the NPL (January 1990).

The California Department of Health Services (DHS) records investigations and clean-up actions at sites under their jurisdiction in the *Abandoned Site Program Information System* (ASPIS), *Hazardous Waste and Substances Sites List* (also known as the Cortese List,), and the *Bond Expenditure Plan* (BEP). The Regional Water Quality Control Board (RWQCB) and California Integrated Waste Management Board (CIWMB) also include their investigations in the Cortese list. There were no DHS investigations within 2,600 feet of the site listed on the ASPIS database (January 1990), the Cortese list (January 1990), or the BEP (January 1990).

The Regional Water Quality Control Board (RWQCB) lists locations of their investigations in the Cortese, Solid Waste Assessment Test (SWAT), and the *Central Valley RWQCB Tank Tracking System* (TTS) lists. There were no RWQCB investigations within 2,600 feet of the site listed on the Cortese list (January 1990), the SWAT database (September 1989), or the TTS list (January 1990).

The California Integrated Waste Management Board (CIWMB) maintains the Solid Waste Information System (SWIS) list containing information on active and inactive landfills and solid waste transfer stations. The CIWMB did not report landfills or transfer stations within 2,600 feet of the site on the SWIS list (January 1990).

The California Department of Water Resources (DWR) had records of the following wells onsite:

- A domestic well owned by Frances Hammer was drilled in February 1978 to a depth of 160 feet. This well appeared to be located on the south parcel (onsite) on the day of Kleinfelder's site visit (see section 3.4).

The California Department of Conservation, Division of Oil and Gas (DOG) maintains field maps of the locations of active and inactive oil and gas wells. According to a DOG field map, there were no such wells onsite.

Copyright 1991 Kleinfelder, Inc.

The San Joaquin County Branch of the State Office of Emergency Services (OES) (Mr. Dennis Fields) was contacted regarding emergency responses to hazardous materials incidents. Mr. Fields stated that the OES did not have records of such incidents within 2,600 feet of the site.

The San Joaquin County Flood Control and Water Conservation District Semi-Annual Groundwater Report for Fall 1989 indicated the regional depth to groundwater in the area around the site was approximately 60-70 feet below the surface. The general groundwater flow direction was from the northeast to the southwest. Groundwater depth and flow direction may vary due to seasonal weather patterns, local pumping, and other influences.

The San Joaquin County Department of Public Health Services, Environmental Health Division (SJCEHD) retains records of permitted underground storage tanks in San Joaquin County. The following facilities, within 2600 feet of the site, were listed in the SJCEHD September 1989 list of facilities with permitted underground tanks:

- **Pacific Bell**, 2300 East Eight Mile Road, approximately 250 feet east of the north parcel. The SJCEHD file indicated that the facility had permits for a 4000-gallon underground diesel fuel storage tank and a 10,000-gallon underground unleaded gasoline storage tank. Precision tests for both tanks were performed on October 6, 1989, according to the file. Results of both tests were within state guidelines according to the file. No other relevant information on the facility was in the SJCEHD file reviewed by Kleinfelder.

- **Kampgrounds of America**, 2851 East Eight Mile Road, approximately 2,000 feet east of the north parcel. The SJCEHD file indicated that the facility had permits for two 5000-gallon underground tanks that contained leaded and unleaded gasoline. Precision tests for both tanks were performed on June 30, 1989. Results of both tests were within state guidelines, according to the file. No other relevant information on the facility was in the SJCEHD file reviewed by Kleinfelder.

- **Western Meter Services**, 1551 East Eight Mile Road, approximately 250 feet north of the north parcel. The SJCEHD file indicated that this facility had permits for a 4,000-gallon underground storage tank and a 300-gallon underground storage tank. The file indicated that the tanks were removed in

Copyright 1991 Kleinfelder, Inc.

1985. Soil samples collected during the removal indicated that soil was not affected by product in the tanks, according to the SJCEHD file.

The San Joaquin County Air Pollution Control District (SJCAPCD) listed the following facilities, within 2600 feet of the site, with air emissions permits:

- **Pacific Bell**, 2300 East Eight Mile Road, 100 feet north of the site. The facility had a air emissions permit for underground storage tanks. Mr. Jim Czarnecki of the SJCAPCD stated that the facility was in compliance with their air emissions permit. No other relevant information was available from the SJCAPCD.

- **Kampgrounds of America**, 2851 East Eight Mile Road, 150 feet north of the site. The facility had an air emissions permit for underground storage tanks. Mr. Jim Czarnecki of the SJCAPCD stated that the facility was in compliance with their air emissions permit. No other relevant information was available from the SJCAPCD.

The San Joaquin County Agricultural Commissioner's Office (SJCAC) (Ms. Mary Jensen) reviewed pesticide use permits in the names of Jim Watanabe and Jim Nuss, the growers onsite, for the period from 1985 to the present. The following restricted pesticides were used onsite and in Section 2 of Township 2 North, Range 6 East:

Date of Permit	Grower	Pesticide/Herbicide	Crop
1986	Watanabe Bros.	Sulphur	Beets
1985	Watanabe Bros.	2,4-D Roundup	Corn
1985	Watanabe Bros.	Ridomil Brano	Tomatoes
1987	Watanabe Bros.	2,4-DB	Alfalfa
1986	Watanabe Bros.	Thiodan Javelin	Tomatoes
1986	Watanabe Bros.	2,4-D	Wheat
1986	Watanabe Bros.	Carbyne MCPA	Wheat

Copyright 1991 Kleinfelder, Inc.

Date of Permit	Grower	Pesticide/Herbicide	Crop
1985	Watanabe Bros.	Pydrin Parathion Ridomil Lannate	Tomatoes
1985	Watanabe Bros.	Thiodan Javelin Nufilm	Tomatoes
1989	Watanabe Bros.	2,4-DB	Alfalfa

These pesticides/herbicides were applied by Valley Helicopter east of West Lane, north of Morada Lane, and south of east Eight Mile Road. The pesticide reports include the fields onsite and possible those between the north and south parcels.

Pacific Gas and Electric, (PG&E) (Mr. Steve Okamoto) was contacted regarding a pad-mounted transformer and four banks of pole-mounted transformers onsite. Mr. Okamoto stated that those PG&E transformers with greater than 500 ppm polychlorinated biphenyls (PCBs) were replaced with transformers containing less than 500 ppm of PCBs. He stated that transformers in areas of "food and feed" should contain less than 50 ppm PCBs. Mr. Okamoto did not know whether or not the transformers onsite contained PCBs.

3.3 AERIAL PHOTOGRAPH REVIEW

Kleinfelder reviewed aerial photographs using a stereoscope for the years 1963, 1973, and 1984. The results of this review are summarized as follows:

1963 The site was two parcels separated by approximately a quarter mile. The northern parcel, referred to as the Bennett property was a rectangular shaped property of approximately 80 acres. The southern property was an irregular shaped parcel that occupied approximately 110 acres and is referred to as the Hammer property.

The Bennett property was bordered on the north by Eight Mile Road, on the west by West Lane Road, and on the south and east by farmland. The site appeared to be recently plowed on the north half of the parcel and the southern half appeared to be cultivated with row crops. No obvious structures or buildings were noted onsite.

Copyright 1991 Kleinfelder, Inc.

The Hammer property was bordered on the north by Bear Creek, on the west by West Lane Road, and on the south and east by an irrigation canal. The site appeared to be planted in rice. Two trailer-sized structures, one barn-sized structure, and a structure which appeared to be a silo were noted south of Bear Creek and east of West Lane.

1973 Bennett property - The site appeared unchanged from the 1963 photos except that rice appeared to have been grown on 75 percent of the site. The northeast corner of the site appeared to be row crop.

Hammer property - Two areas were noted that resembled debris. One area was located in the northeast corner south of Bear Creek and another area was noted south of Bear Creek northeast of the shop building. These may be areas where trash and debris were burned, which was a common agricultural practice.

1984 Bennett property - The site appeared to have been planted in row crops and pasture. No other obvious changes were noted onsite from the 1973 photos.

Hammer property - The site appeared to have been planted in row corps. No other obvious changes were noted onsite.

The surrounding area was mostly farmland and rural residences; however, residential development was noted approximately one half mile south of the site. A warehouse-sized structure surrounded by a paved parking lot (Pacific Bell facility on the day of Kleinfelder's site visit) was located adjacent to the northeast corner of the site.

The aerial photography review revealed that most of the site was agricultural land in the 1963, 1973, and 1984 photos. Two trailer-sized structures, a barn-sized structure and what appeared to be a silo were present on the southern parcel in the 1963, 1973, and 1984 photos. The area around the site was mostly rural in the 1963 and 1973 photos with increasing residential development south of the site in the 1984 photos.

Copyright 1991 Kleinfelder, Inc.

3.4 SITE VISIT

A site visit was conducted on August 22, 1990. The north parcel, approximately 83 acres, had been plowed. The south parcel, approximately 111 acres, was grown as alfalfa. The north border of the southern parcel was Bear Creek.

North Parcel:

An irrigation well was located on the central eastern border of the north parcel. Two pole-mounted transformers that appeared in good condition were located near the well. One of these transformers had a blue label that read, "non-PCB." Another bank of three unlabeled pole-mounted transformers that appeared in good condition were located in the southeast corner of the north parcel. An unlabeled pad-mounted transformer was located in the southwest corner of the north parcel. No obvious stains were noted on the transformer or the pad.

No obvious soil stains, odors, or pooled liquids were noted on the north parcel.

South Parcel:

A mobile home, three grain bins, and a warehouse were noted on the south parcel. Three separate areas onsite had stained soil. One soil stain was located on a dirt floor of the warehouse. The stain had petroleum hydrocarbon odors and measured approximately two square feet in surface area. A second soil stain was located outside the northwestern corner of the warehouse and was approximately 3 by 6 feet in surface area. A hand auger was used to assess the vertical extent of the soil. Petroleum hydrocarbon odors exceeded the 2.5 feet depth in the center of the stain. The third stained area was located approximately 10-15 feet south of the grain bins and was approximately 4 square feet in surface area.

The following chemical containers were noted on the south parcel:

- Two unlabeled approximately 300-gallon aboveground diesel storage tanks were near the grain bins. One of the tanks appeared in good condition with no obvious leaks. The other tank had staining on the underside. However, no obvious soil stains were noted on the soil under the tanks.

Copyright 1991 Kleinfelder, Inc.

- Four 25-gallon drums (one containing grease, one containing transmission fluid, and two empty Supracide and Roundup drums), five empty 5-gallon diesel fuel containers, two unlabeled 10-gallon drums containing an unidentified chemical, one unlabeled and empty 10-gallon container, and eight unlabeled 5-gallon containers of unknown chemicals were located in the warehouse.

- A 30-gallon drum labelled Supracide and an unlabeled 10-gallon container were located in the western grain bin. The drums were empty. According to Mr. Leland Fortney, the caretaker, the grain bin was used to store used pesticide containers before the grower rinsed them.

- A 30-gallon drum was located next to the 3 feet by 6 feet soil stain. The drum was unlabeled, old, and appeared in poor condition due to rust and staining.

Mr. Fortney indicated that an abandoned domestic well was located approximately 20 feet west of the mobile home. A 100-gallon pressure tank was located next to the well head. He stated that the well caved in, and thus a second well was drilled on the north side of the mobile home. The second well was connected to the 100-gallon pressure tank and another 200-gallon pressure tank. He did not know if the caved-in well was properly abandoned. A third well (irrigation well) was located in the northeast corner of the south parcel.

Mr. Fortney stated that a septic tank was pumped dry and then abandoned underneath the mobile home (he did not know if the septic system was abandoned in accordance with County regulations). A newer septic system was installed on the eastern side of the mobile home with leach lines running to the southeast.

A pole-mounted transformer was located 40 feet northeast of the mobile home. The transformer was unlabeled. Another bank of three unlabeled transformers were located in the northeast corner of the south parcel.

A drive-by survey of the area surrounding the site was conducted to observe facilities using chemicals or materials which, by their nature, may present a potential environmental concern. Materials of concern include the contents of underground or aboveground

Copyright 1991 Kleinfelder, Inc.

storage tanks, materials storage areas, chemical containers or 55-gallon drums. The following facilities within 2,600 feet of the site were noted during the driveby:

- **Kampgrouuds of America,** 2851 East Eight Mile Road, 150 feet north of the site. Two fuel dispensers were noted at the facility. See discussion of the facility's underground storage tanks under SJCEHD, on page 6.

- **Pacific Bell,** 2300 East Eight Mile Road, 100 feet north of the western portion of the site. Two fuel dispensers were noted onsite. See discussion of the facility's underground storage tanks under SJCEHD, on page 6.

- **Western Meter Services,** 1551 E. Eight Mile Road, 250 feet north of the north parcel. SJCEHD records indicated that the facility had a permitted underground storage tank that was removed in 1985. See discussion of this facility under the SJCEHD, on page 6.

- **Ranch on Ham Lane,** 1500 feet north of the north parcel. The facility had one 300-gallon, one 200-gallon, and one 55-gallon aboveground storage tank. The tanks were unlabeled. The condition of the tanks or the soil underneath them could not be assessed from the road.

- **Midway Cabinets,** northeast corner of E. Eight Mile Road and West Lane, 300 feet north of the north parcel. The facility had three 300-gallon aboveground storage tanks. No labels or stains were visible on the tanks.

- **Residence,** northeast corner of West Lane and Morada Lane, 2,600 feet south of the south parcel. The facility had three unlabeled 250-gallon aboveground storage tanks (two were on trailers) and a 250-gallon propane tank. No obvious leaks or stains were noted on the tanks.

Copyright 1991 Kleinfelder, Inc.

4 DISCUSSION OF ENVIRONMENTAL CONCERNS

On the date of the site visit, stained soil with petroleum hydrocarbon odors was noted in three separate areas (inside the warehouse, near the grain bins, and on the north side of the warehouse) on the southern parcel of the site. The stained areas consisted of approximately 25 square feet of surface area. The stains should be assessed for the vertical and lateral extent of affected soil. Samples of the affected soil should be collected and analyzed. Based on the analytical results, disposal or treatment options for affected soil can be discussed.

Partially full and empty chemical containers are located on the south parcel. These containers and their contents should be removed and properly disposed of. Two of these containers are approximately 300-gallon aboveground diesel storage tanks. Mr. Fortney stated that a previous grower of the south parcel periodically rinsed pesticide containers on soil near the southwest corner of the warehouse. Surface soil samples should be collected in areas of chemical container storage, in the pesticide container rinse area and inside a grain bin onsite where empty pesticide containers were reportedly stored. These samples should be analyzed for persistent pesticide residues.

A Pacific Gas & Electric (PG&E) pad-mounted transformer was located on the north parcel. No obvious stains were noted on the transformer or on the pad. Four banks of pole-mounted transformers were noted on the north and south parcels; one of these transformers on the north parcel had a blue label indicating that it did not originally contain polychlorinated biphenyls (PCBs). PG&E was contacted regarding the presence of PCBs in the transformers. Mr. Steve Okamoto of PG&E was not aware of whether or not the transformers contained PCBs. If the client desires additional information on the contents of unlabeled transformers, then PG&E should be coutacted.

Four wells were noted onsite. One of these wells (domestic) had caved in, according to Mr. Fortney. This well was probably not abandoned in accordance with SJCEHD requirements. If these wells or additional wells that are discovered onsite during development, will be used in the future, water samples should be collected in them and analyzed in accordance with their intended use. If wells located onsite will not be used in the future, they should be abandoned in accordance with SCEMD requirements.

Copyright 1991 Kleinfelder, Inc.

Mr. Fortney indicated that a septic tank was pumped dry and abandoned underneath the mobile home. He did not know if the septic tank was properly abandoned. Another septic tank (in use on the date of Kleinfelder's site visit) is located on the eastern side of the mobile home. If these septic systems will not be used in the future, they should be abandoned in accordance with SJCEHD requirements.

Based on the aerial photo review and the known application of pesticides and rinsing of pesticide containers onsite between 1985 and 1989, residual pesticides are a concern. If the client desires further information on the possibility of persistent pesticide residues in soil, surface soil samples should be collected and analyzed. This recommendation is commonly made for previously agricultural land proposed for residential development. This recommendatiou does not imply that pesticide residues are present in site soils.

The 1973 aerial photos revealed two areas on the southern parcel where debris may have been dumped or burned. If further information about these areas is desired, soil samples should be collected and analyzed.

Records at the SJCEHD indicate that three facilities upgradient of the site had permitted underground storage tanks. Two of these facilities (Kampgrounds of America and Pacific Bell) appeared to be in compliance with their tank permit based on information in SJCEHD files. The underground storage tanks that were located at Western Meter Services were removed in 1985. No reports of leaks or spills were noted in the SJCEHD files. Based on the proximity of two facilities with underground storage tanks, if site groundwater will be used iu the future, it should be sampled and analyzed in accordance with its intended use.

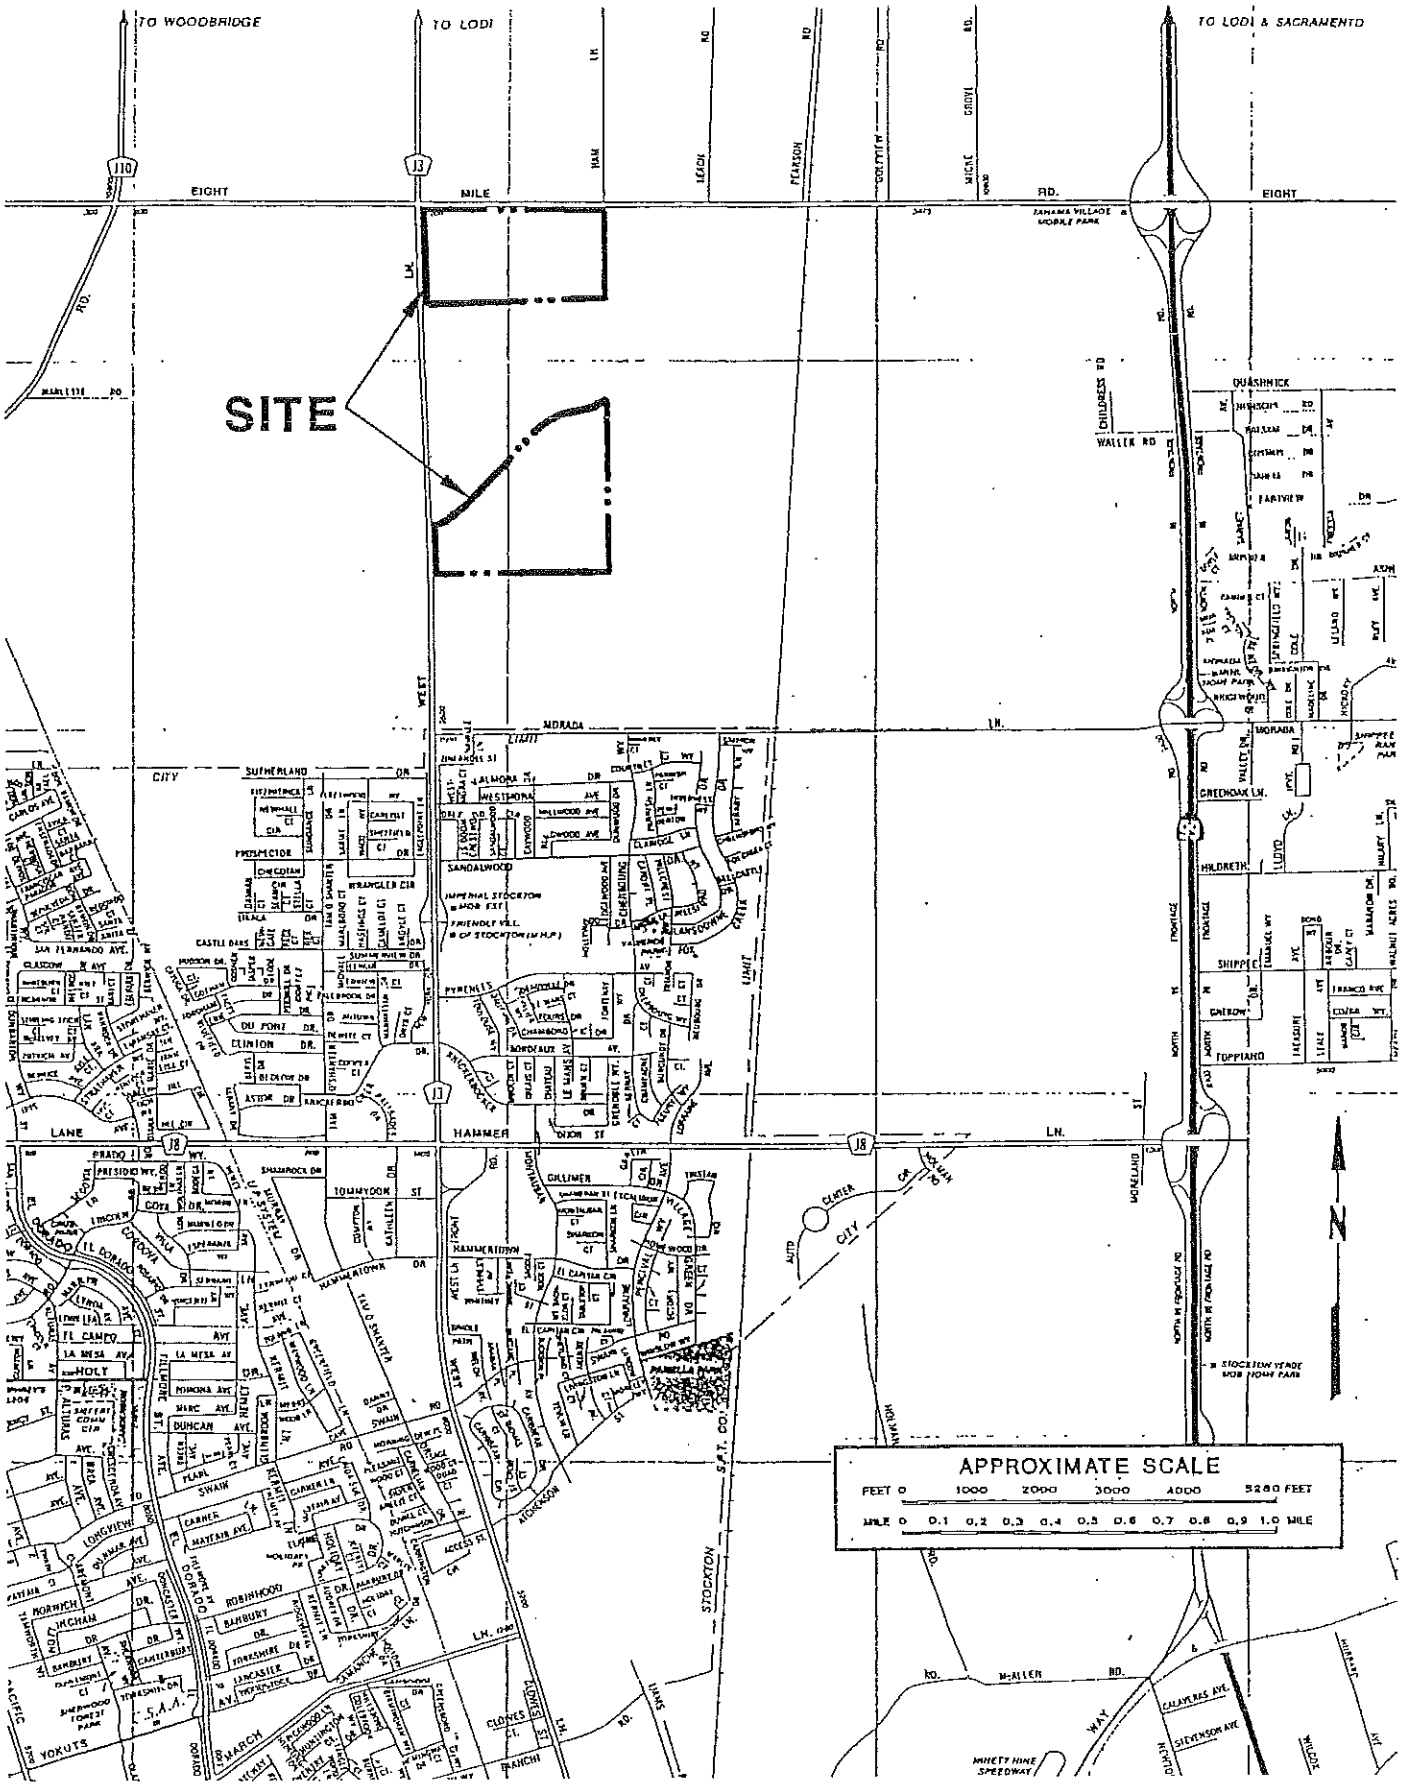
5 LIMITATIONS

The scope of work for this report was intended to provide a limited review of available information related to the possible presence of hazardous chemicals at the referenced site. This assessment is not intended to be comprehensive, identify all potential concerns, or eliminate the possibility of acquiring land with some degree of risk.

The scope of work for this project was limited to a qualitative evaluation of site information associated with the potential presence of hazardous chemicals in conjunction with the transfer of, or financing of the referenced property. This limited environmental evaluation did not include other services not described that would reduce the risk of not locating toxic substances on the property. Other environmental or geotechnical investigative services not provided within this specific scope of work can be provided for additional fees.

Our report of findings is based on historical aerial photograph review, field observations, regulatory agency communications and file reviews. The earliest photographs reviewed were taken in 1963. Earlier photographs may be obtained and reviewed at additional time and expense.



Kleinfelder performed this preliminary assessment in accordance with generally accepted standards of care that existed in Northern California at the time of this study, and in accordance with our proposal, dated August 9, 1990 (Reference 24-YP2381), from which the scope of work was selected by the client. It should be recognized that a definition and evaluation of environmental conditions is a difficult and inexact art. Judgements leading to conclusions and recommendations are generally made with an incomplete knowledge of the conditions present. More extensive studies may reduce the inherent uncertainties associated with environmental conditions. If the client wishes to further reduce the uncertainty associated with this study, Kleinfelder should be notified for additional consultation. No warranty, expressed or implied, is made.

This report may be used only by the client and only for the purposes stated, within a reasonable time from its issuance. Land use, site conditions (both onsite and offsite) or other factors may change over time, and additional work may be required with the passage of time. Any party other than the client who wishes to use this report shall notify

Copyright 1991 Kleinfelder, Inc.

Kleinfelder of such intended use by executing the "Application for Authorization to Use" which follows this document as an Appendix. Based on the intended use of the report, Kleinfelder may require that additional work be performed and that an updated report be issued. Non-compliance with any of these requirements by the client or anyone else will release Kleinfelder from any liability resulting from the use of this report by any unauthorized party.

SUBJECT: **Verification of Verbal Information**

Dear Mr. Czarnecki:

On August 27, 1990, you were contacted by Kleinfelder regarding air emissions permits, per the attached telephone conversation summary.

We sincerely appreciate the information you provided during the conversation. The information is summarized in the attached telephone conversation record and may be used in a report. Please take a moment to review the telephone conversation record. If you have any comments, please contact Randy Reid within two weeks. Our project has a short timeframe so your immediate attention to this matter is appreciated.

Sincerely,

Foreword

The Bear Creek East Specific Plan originally submitted an application for development in June 2005, that initiated a request for a Water Supply Assessment (WSA). The City of Stockton Municipal Utilities Department (COSMUD), being the retail water provider, completed the WSA making the determination of water supply sufficiency on the basis of existing surface and groundwater supplies and the progress made toward securing the water right entitlements from the California Delta, and the completion of a Delta diversion and surface water treatment plant Delta Water Supply Project (DWSP) to provide potable drinking water supplies to the City of Stockton for existing and planned future growth. In addition, a purchase agreement with the Woodbridge Irrigation District for water supply from the Mokelumne River was executed on 2008.

At the time of the original 2005 WSA, many planning elements were in development, especially, the 2035 General Plan Update (2035 General Plan) and the DWSP. Since 2005, Stockton has experienced an unforeseen economic slowdown. Due to the lapse in time since the initial WSA was requested and the changes in the pace development, the City of Stockton made the determination that a new WSA should be required from COSMUD. This leaves the question of where the Project is placed in the list of all WSA's completed after the 2005 WSA. As of April 2011, 12 WSA's were completed after the Project's 2005 WSA totaling 10,900 acres of land not including the Project's 320 acres. In July 2011, an updated WSA was completed, and concluded that COSMUD could support the Bear Creek East Specific Plan based on the 2010 UWMP.

In December 2015, the Tra Vigne Development Project submitted an application to the City of Stockton Community Development Project. The updated Project site slightly decreases in total acreage, but increases substantially in the areas of residential housing.

Based on the *Guidebook for Implementation of Senate Bill 610 and Senate Bill 221 of 2001* (California Department of Water Resources, October 2003), projects with an existing WSA are given special consideration on having to complete or update a WSA. If all five factors listed below are met, the COSMUD would have the legal basis for not having to update a WSA:

1. The preparer of the assessment determines that it complies with the requirements of Senate Bill (SB) 610.
2. The assessment determined that sufficient water was available for the Project.
3. There has been no change to the Project that would result in a substantial increase in demand.

4. There has been no change in the circumstances or conditions that substantially affect the ability of the water supplier to provide a sufficient supply of water for the Project.
5. No new information that might affect the assessment has becomes available.

Given a conservative interpretation to each of the items, the economic slowdown is a significant changed condition under Item 4, but not one that substantially affects the sufficiency of water supplies to the Project as originally laid out in the 2005 and 2011 WSA. Because Item 5 includes the 2007 General Plan and the Water Master Plan Update (WMPU) (West Yost and Associates, July 2008) as new information, there are policy changes and updated planning assumptions that affects the Project's WSA. One example is the use of updated unit water demand factors developed and used in the WMPU and Senate Bill SBX-7 (2009) that requires demand management strategies from all California water providers. Another example, is the State of California's historic five-year drought, in which the City of Stockton was mandated to conserve 28% water throughout its service area.

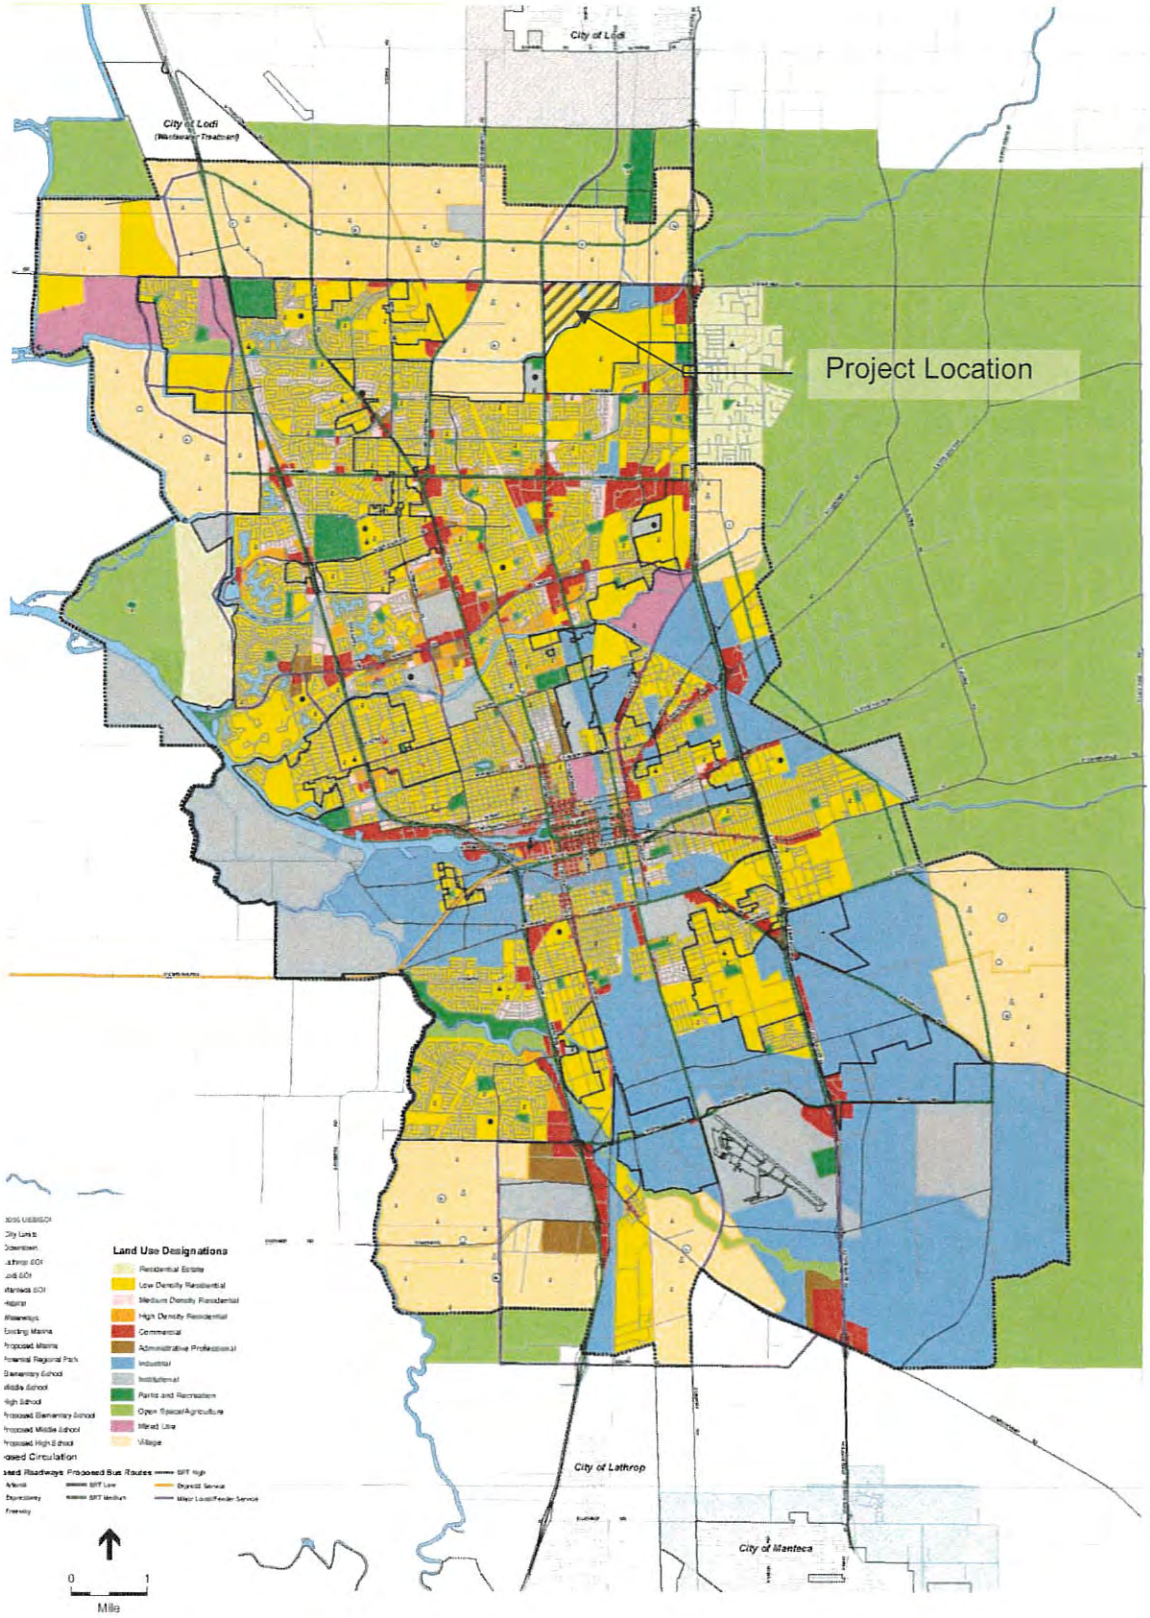
Based on the above, COSMUD is taking the approach that the Project's WSA will maintain its place in the order of WSA completions and will assume the same level of foreseeable development used in 2005 and 2011 plus any new development that has actually been completed or underway with issuance of new housing permits (not necessarily occupied). This WSA is intended to replace, and not update, the 2005 and 2011 WSAs and includes the water supply and water infrastructure outlook based on 2017 conditions. More importantly, this WSA makes full use of the 2015 Urban Water Management Plan (UWMP) adopted by the Stockton City Council in July 2016. In so doing, the Project's water demand is taken in to consideration and included within the UWMP 20+ year requirement of water sufficiency.

The Project WSA that follows adds Project specificity where needed to comply with SB610 in the determination of water supply sufficiency as included in the 2015 UWMP.

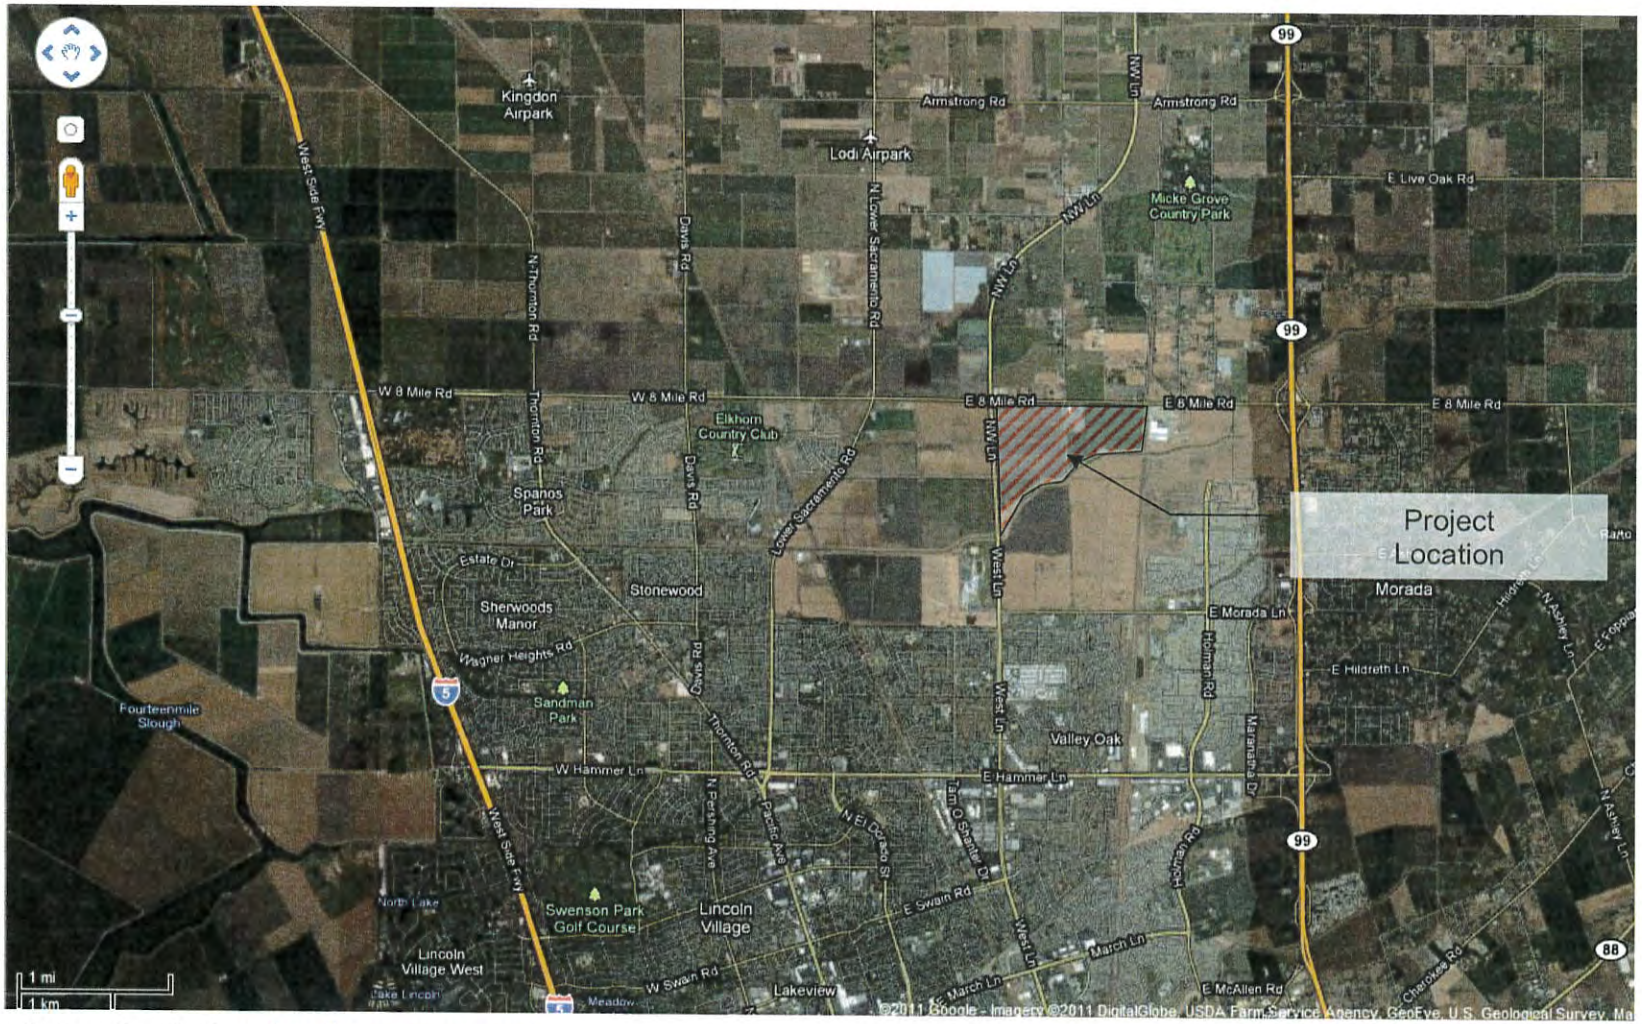
1.0 BACKGROUND

The California Water Code requires coordination between land-use lead agencies and public water purveyors. The purpose of this coordination is to ensure that prudent water supply planning has been conducted, and that planned water supplies are adequate to meet existing demands, anticipated demands from approved projects and tentative maps, and the demands of a proposed development Tra Vigne Development Project (Project).

California Water Code Sections 10910 through 10915 (inclusive) requires land-use lead agencies: (1) to identify the responsible public water purveyor for a proposed development project, and (2) to request a Water Supply Assessment (WSA) from the responsible purveyor. The purpose of the WSA is to demonstrate the sufficiency of the purveyors' water supplies to satisfy the water demands of the proposed development project, while still meeting the current and projected water demands of existing customers. California Water Code Sections 10910 through 10915 delineates the specific information that must be included in the WSA.



1.1 PROJECT DESCRIPTION



The Project is located south of Eight Mile Road, east of West Lane, west of the Union Pacific Railroad, and north of the Bear Creek drainage corridor (see **Figure 1-1**). The Project is composed of approximately 341.17 acres, 318.82 acres of which would be developed by the Project.

The Project is presently located in the unincorporated area of San Joaquin County, within the City of Stockton Sphere of Influence and Urban Services Boundary, as delineated and defined in the 2035 General Plan. The Project's proposed land uses are generally consistent with the 2035 General Plan including mixed land uses of residential, multi-family, commercial, and industrial. **Figure 1-2** shows the Project and its proximity to existing urban development. **Table 1-1** includes the Project's land use acreages that have been apportioned to closely match the 2035 General Plan land use designations shown in **Figure 1-1**.

1.2 NEED FOR WRITTEN ASSESSMENT AND VERIFICATION

Due to the Project size and location, a WSA per Senate Bill (SB) 610 is needed to identify the available water supplies for existing urbanized areas and foreseeable growth, including the Project, for 20 years into the future. SB 610 seeks to promote more collaborative planning among local water suppliers, and Cities and Counties. This statute requires detailed information regarding water availability to be provided to the City and County decision makers before approval of specified large development projects. This statute also requires detailed information be included in the administrative record that serves as the evidentiary basis for an approval action by the City or County on such projects. Both measures recognize local control and decision making regarding the availability of water for projects and the approval of projects.

1.3 CITY OF STOCKTON MUNICIPAL UTILITIES DEPARTMENT (COSMUD)

The City of Stockton Metropolitan Area (COSMA) comprises of the three City of Stockton water retailers COSMUD, California Water Service Company (Cal-Water), and San Joaquin County and their respective service areas. The term COSMA is used only for convenience when grouping the water retailers and should not be construed as a legal entity.

As one of three retail water providers serving potable water supplies to the COSMA, COSMUD is responsible for preparing the WSA for the Project. In so doing, COSMUD has relied on and incorporates by reference its prior analysis including the following reference documents:

- City of Stockton 2015 UWMP (Brown and Caldwell, July 2016)
- City of Stockton Water Master Plan Update (WMPU) (West Yost and Associates, July 2008)
- Goals and Policies Report 2035 General Plan (City of Stockton, December 2007)

1.4 PURPOSE OF WSA

Under SB 610, water assessments must be furnished to local governments for inclusion in any environmental documentation for certain projects (as defined in California Water

Code 10912 [a]) subject to the California Environmental Quality Act (CEQA). Under SB 221, approval by a City or County of certain residential subdivisions requires an affirmative written verification of sufficient water supply. If coordinated and comprehensive water supply planning is underway at the time that the SB 610 water assessment is prepared, compliance with SB 221 will be greatly facilitated. SB 221 is intended as a 'fail safe' mechanism to ensure that collaboration on finding the needed water supplies to serve a new large subdivision occurs when it should – before construction begins.

1.5 SENATE BILL 610

Under SB 610 (codified as California Water Code, Section 10910 through 10915), each public water system responsible for serving proposed projects meeting specified criteria (e.g., residential projects of more than 500 residential dwelling units or industrial park projects greater than 50 acres) must prepare a WSA evaluating whether the water system's "total projected water supplies...will meet the projected water demand associated with the proposed project," together with existing and other foreseeable planned future uses over a 20-year horizon. If, as a result of its assessment, the public water system concludes that its water supplies are not sufficient, the assessment must detail its plans in acquiring the necessary water supplies.

1.6 USE OF 2015 URBAN WATER MANAGEMENT PLAN

The importance of the Urban Water Management Plan (UWMP) and the General Plan are best described from the *Guidebook for Implementation of Senate Bill 610 and Senate Bill 221 of 2001*, (October 2003, DWR) as follows:

> *A foundational document for compliance with both SB 610 and SB 221 is the Urban Water Management Plan (UWMP). Both of these statutes repeatedly identify the UWMP as a planning document that, if properly prepared, can be used by a water supplier to meet the standards set forth in both statutes. Thorough and complete UWMPs will allow water suppliers to use UWMPs as a foundation to fulfill the specific requirements of these two statutes. Cities, counties, water districts, property owners, and developers will all be able to utilize this document when planning for and proposing new projects.*
>
> *UWMPs serve as important source documents for cities and counties as they update their General Plan. Conversely General Plans are source documents as water suppliers update their UWMPs. These planning documents are linked and their accuracy and usefulness are interdependent. It is*

> *crucial that cities/counties and water suppliers work closely when developing and updating these planning documents.*

The purpose of the 2015 UWMP is premised on meeting the following:

> *The City's UWMP has been prepared in accordance with the Act, as amended, California Water Code, Division 6, Part 2.6, Sections 10610 through 10656. The Act became part of the California Water Code with the passage of Assembly Bill 797 during the 1983–1984 regular session of the California legislature. The Act was amended in November 2009 with the adoption of the Water Conservation Act or SBX 7-7 and was most recently amended in 2014. The Water Conservation Act is described in Division 6, Part 2.55, Section 10608. (Page 1-1 of 2015 UWMP)*

Due to the diligence of both COSMUD and the City of Stockton, the policy linkages provided in the 2015 UWMP between water supply and water demand is in step with the 2035 General Plan. The only major difference is in the rate of growth assumed in both documents with the 2015 UWMP showing a reduced growth curve as compared to the 2035 General Plan. The 2015 UWMP and this WSA recognize the reason for the slow growth given the national and local economic condition.

In most cases the information and findings used in this WSA will relate back to the 2015 UWMP. Given the full description of supply and demand for the COSMUD service area in the 2015 UWMP, this WSA will fully rely on the 2015 UWMP to respond to some requirements of SB 610. When cited, the section and page number of the 2015 UWMP are included as reference.

1.7 SENATE BILL NO. 7 (SBX7-7), THE WATER CONSERVATION ACT OF 2009.

Reference to SBX7-7 in the beginning of the 2015 UWMP serves to highlight its importance in the overall UWMP implementation, and in planning estimates of water demand and demand management goals implemented over the next 10 years. SBX7-7 was enacted in November 2009 and was most recently amended in 2014. The Water Conservation Act is described in Division 6, Part 2.55, Section 10608.

The Act requires every urban water supplier providing water for municipal purposes to more than 3,000 customers or supplying more than 3,000 acre-feet of water annually to adopt and submit an UWMP every five years to the California Department of Water Resources (DWR). The Act describes the required contents of the UWMP as well as how urban water suppliers should adopt the UWMP.

2. 0 PROJECTED SERVICE AREA DEMANDS

Under the California Water Code, demand and supply must be evaluated over a 20-year horizon. Therefore, COSMUD has evaluated the revised growth calculations in the 2015 UWMP (Table 3-3, Page 3-3 of 2015 UWMP), which includes the Project's water demand as well as water demand from planned future growth. Growth in the 2015 UWMP is based on population growth figures over the entire 2035 General Plan proposed Urban Policy Area. Planned future growth is described in the guidebook published by the California Department of Water Resources as follows:

> *Neither SB 610 nor SB 221 defines planned future uses. However, it would be a reasonable interpretation that planned future uses are those that would be undertaken within the same time frame as the project under consideration. Each preparer of an assessment will determine what planned future uses it will include in the demand calculation to ensure that it is not identifying the same increment of water for more than one future use. (Guidebook for Implementation of Senate Bill 610 and Senate Bill 221 of 2001, California Department of Water Resources, October 2008)*

This WSA is based on a project that is defined as a planned future use that has submitted a development application and the City of Stockton has made a request for a WSA to one or more of the retail water providers serving the City of Stockton. This WSA will consider the water demands for the above definition of growth and will compare this to water supplies from existing and future sources of supply. When looking at water supply sustainability, COSMUD has taken a conservative approach in their 2015 UWMP by looking out to 2040 for both demands and supplies.

2.1 SBX7-7 DEMAND REDUCTION GOALS

The actions of SBX7-7 are shown by including the 2015 UWMP Water Demand projection with and without the SBX7-7 requirement. Projected water demands for the City's retail water service area through the year 2040 meet the City's SBx7-7 GPCD target. As shown in Table 2-1 and on **Figure 2-1**, the projected expected passive water savings and conservation program water savings will enable the City to meet its GPCD target of 165 GPCD. Water use declined in 2014 and 2015 as a result of the Governor's drought declaration. It is assumed that the current decline in water use due to the drought is temporary and will increase to near 2012 levels.

TABLE 2-1. WATER DEMANDS PAST, PRESENT, AND FUTURE

Year	2010 UWMP and 2015 UWMP Actual Historical Demands (AF/year)	Tables 3-3 and 3-4 2015 UWMP Demands (AF/year)	Table 3-4 2015 UWMP Values Before SBX7-7 (AF/year)	Table 3-4 2015 UWMP Values After SBX7-7 (AF/year)

2040		44,465	45,325	42,989

Notes:

1. Actual Demands in Col(1) are based on a combination of Table 6 and Table 9 in the 2010 UWMP. In cases where the two do not agree, the values in Table 6 were used. The Actual Demand in Col(1) for the Year 2015 is from Table 3-4 of the 2015 UWMP. Data for Years 2011 through 2014 are not available in the 2015 UWMP.
2. The 2015 UWMP demand for Year 2005 is not available in the 2015 UWMP, so the Year 2005 demand in Col(3) is based on Table 6 of the 2010 UWMP. The Table 3-3 and 3-4 2015 UWMP demands were used as a starting point from which the remaining values were calculated based on the average yearly increase in demand.
3. The Col(3) and (4) demand values are taken directly out of Table 3-4 of the 2015 UWMP.

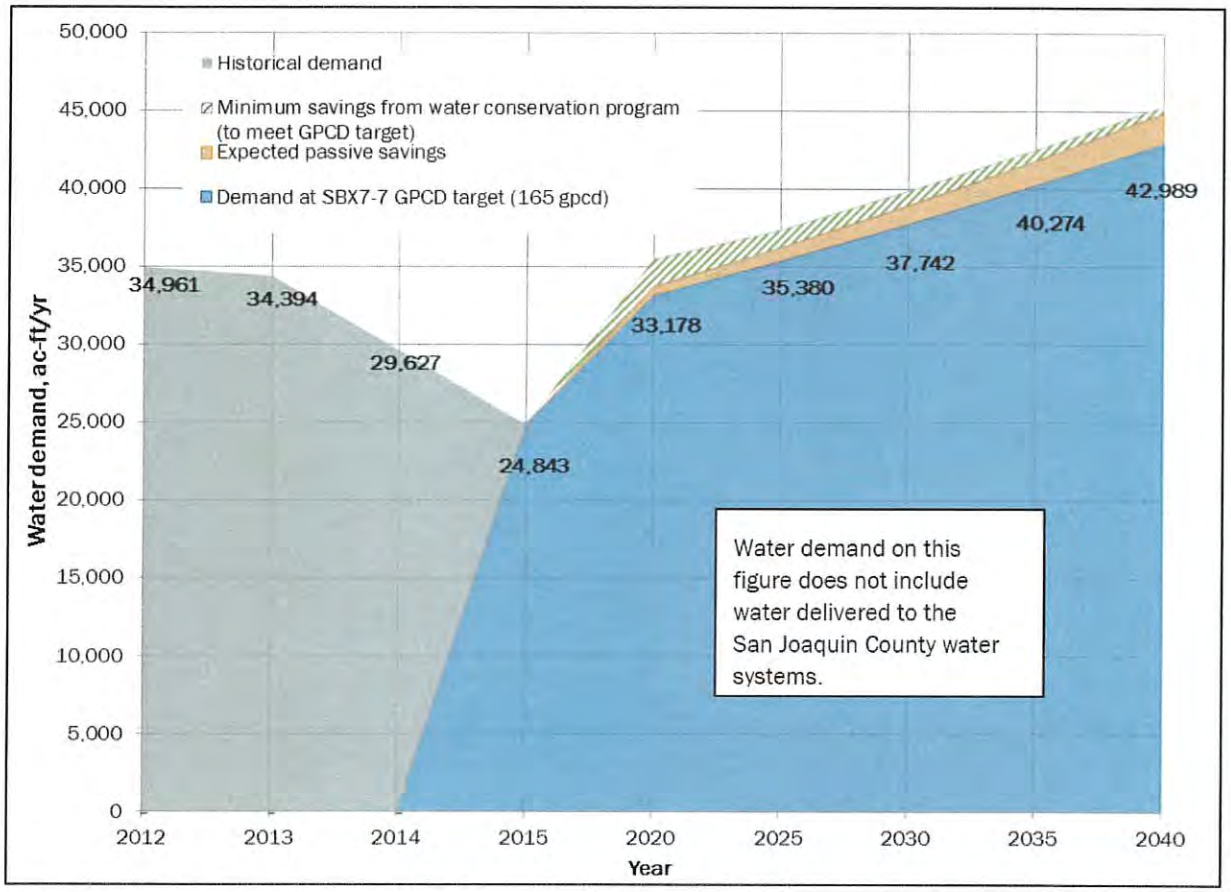

FIGURE 2-1. 2015 UWMP CITY OF STOCKTON RETAIL WATER SYSTEM HISTORICAL AND PROJECTED WATER DEMAND

2.2 CALCULATION OF BASELINE WATER DEMANDS

In **Figure 2-2**, the Project water demands lie below the 2015 UWMP Projected Demands curve but on top of what is now considered to existing population and all approved growth (a.k.a. Baseline of Existing Water Demands). The best illustration of the baseline demands is by considering existing population as existing water use that slowly increases with each year due to one or more of the following:

- Purchase of vacant homes that are currently on the market for sale
- Construction and purchase of new homes in already approved developments
- Construction of new homes in separate infill projects that do not meet the requirements of needing a WSA but require adherence to the 2035 General Plan and approval by City Council

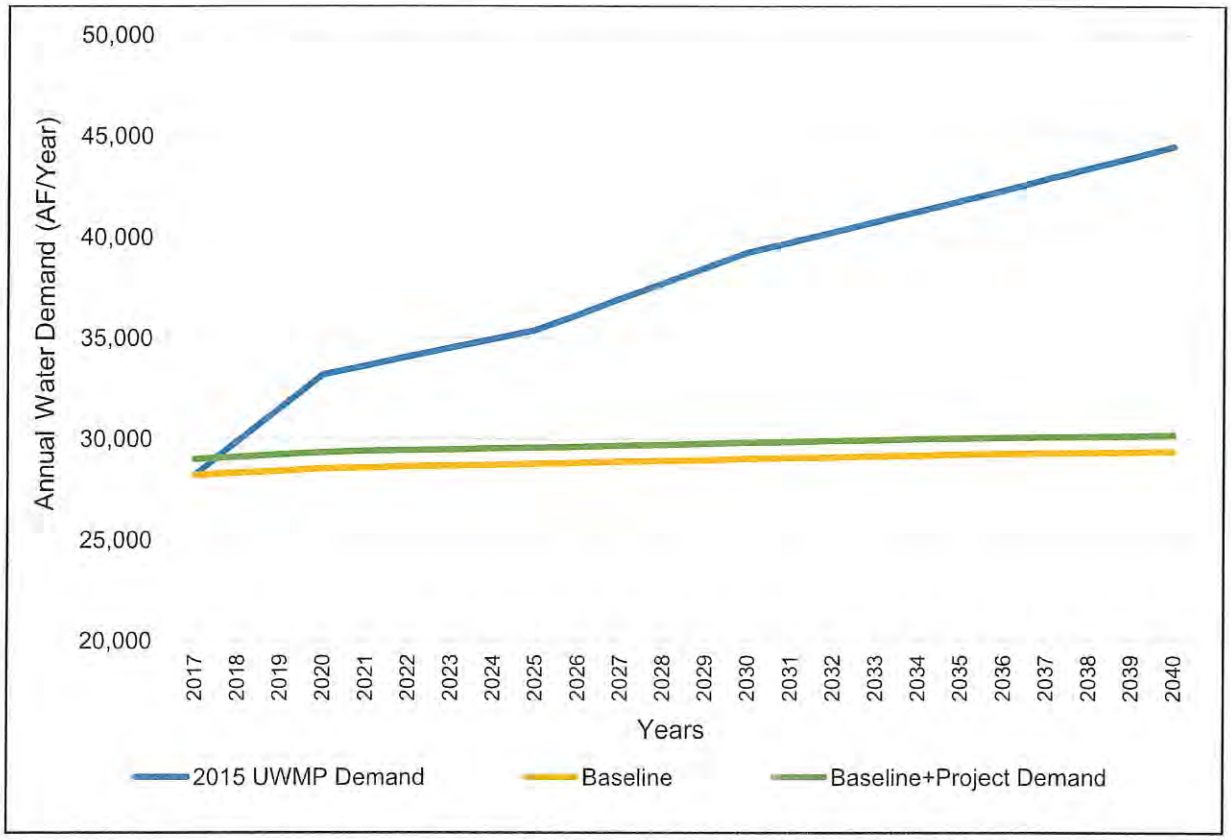

FIGURE 2-2. PROJECTED WATER DEMANDS WITH PROJECT

These are all intended to accommodate the adsorption of planned growth in the COSMA assuming no new developments are approved. These growth measures result in an increase to the COS population and an increase to COSMUD's water demands. The subtle increase in the baseline demand to account for the population increase is assumed to be 0.4% per year in 2020, 0.16% per year in 2035, and 0.12% per year in 2040. The 70 year distribution (i.e., assumed build-out in 2080) of growth is based on the amount of land with entitlements to build new homes that are assumed to be within the COSMUD service area. The amount of undeveloped land was estimated by the City of Stockton Planning Department as 3,500 acres. The 2015 UWMP projected water demand curve and the calculated "Baseline of Existing Water Demands" are shown on **Figure 2-2**.

2.3 UNIT WATER DEMANDS

The calculation of total water demand for the Project is based on the 2015 UWMP and its use of AF/year per connection. **Table 2-2** below contains the unit water demands calculated using data from the 2015 UWMP (Table 2-2, Page 2-5 of the 2015 UWMP, and Table 3-2, Page 3-2 of the 2015 UWMP). Given that the unit water demands are presented on a "per-connection" basis, a unit water demand on a "per-acre" basis can be developed using known averages on how many homes are built on a gross acre of residential developed land including arterial streets. Based on the Project's land use tabulation, total residential units range from 1,413 to 1,503. Of the 1,503 units, up to 340 units would be multi-family

residential, and up to 1,163 would be single family residential. Using the maximum number of multi-family residential units, the overall average over the 11.7 acres of multi-family residential uses is approximately 29.0 multi-family residential connections per multi-family residential acre. Using the maximum number of single family residential units, the overall average over the 232.18 acres of single family residential uses is approximately 5.0 single family residential connections per single family residential acre.

For commercial, industrial, and open space land uses, it is difficult to statistically show how many connections might occur on an acre of land within the Project. Given that demands for these uses are on average low, the unit demand factors applied in previous WSAs will continue to be used. Based on these known parameters, **Table 2-2** also includes the per-acreage demand factors for use in this WSA.

TABLE 2-2. UNIT WATER DEMANDS

Water Use Sectors	Unit Demands in AF/year/connection as per 2015 UWMP[1]	Unit Demand in AF/acre/year
Single Family Residential	0.33	1.65
Multi-family Residential	0.77	22.33
Commercial	4.08	1.50
Industrial[2]	124.86	1.50
Open Space	4.21	2.00

Key: AF = acre-feet Notes:
1.) Unit Demands for Commercial, Industrial, and Open Space sectors taken from Table 8 of 2010 UWMP. Unit Demands (AF/year/connection) for Single Family Residential and Multi-family Residential sectors were calculated by dividing the actual demand (AF/year) for the Single Family Residential sector and Multi-family Residential sector (Table 3-2, Page 3-2 of the 2015 UWMP) by the number of Single Family Residential and Multi-family Residential connections in the Year 2015 (Table 2-2, Page 2-5 of the 2015 UWMP). The Unit Demands (AF/acre/year) for Single Family Residential and Multi-family Residential sectors were calculated by taking the Unit Demand (AF/year/connection) and multiplying by the proposed connections per acre (5.0 for Single Family Residential and 29.0 for Multi-family Residential).
2.) The 124.86 AF per connection unit demand in Table 2-2 for industrial uses is high due to the small number of connections per acre of industrial zoned lands (e.g., one industrial connection can take up more than 1 acre).

Change in the unit water demands (i.e., AF/year/connection or AF/year/acre) will occur over time as demand management measures to meet SBX7-7 are implemented. This permanent change in per capita water use will be captured in the 5-year updates to the UWMP and in the progress reporting on meeting SBX7-7.

2.4 CALCULATION OF PROJECT'S AVERAGE ANNUAL WATER DEMANDS

Application of the unit demand factors in **Table 2-2** on the Project land-use diagram acreages identified in **Table 1-1** yields the total estimated annual water demand of the Project at build-out as calculated in **Table 2-3**.

TABLE 2-3. PROJECT TOTAL AVERAGE ANNUAL WATER DEMAND

Land Use	Acreage (acres)	Unit Water Demand Factor (AF/acre/year)	Estimated Water Demand (AF/year)
Single Family Residential	232.18	1.65	383.10
Multi-family Residential	11.70	22.33	261.26
Commercial	10.50	1.50	15.75
Industrial	15.57	1.50	23.36
Parks and Recreation	15.07	2.00	30.14
Major Roads	21.09	1.50	31.64
Schools and Institutional Facilities	14.70	1.50	22.05
Open Space/Agriculture	20.36	2.00	40.72
Totals	**341.17**		**808.01**

3. 0 ELEMENTS OF A WSA [WATER CODE SECTION 10910]

The format of this WSA is intended to follow California Water Code Sections 10910 through 10915 to delineate clearly the specific requirements of a WSA. This WSA is structured according to those requirements. Section 10910 of the California Water Code is intended to evaluate if existing water supply sources are adequate to meet existing water demands, the Project demands and the demands of all planned foreseeable future uses within the public water system. What follows is a breakdown of the elements of the California Water Code that respond to the adequacy of existing supplies. If under Section 10910 existing water supplies are adequate to serve existing water demands, the Project and all planned future uses within the public water system over the 20-year horizon, the WSA can move forward with a positive finding of sufficiency in water supplies. If Section 10910 is not satisfied, further evaluation into planned water supply sources and projects need to be included as per Section 10911 of the California Water Code.

In addition to meeting the California Water Code, this WSA will also assist City Planners in their evaluation of the Project's compliance in meeting 2035 General Plan policies (Goal PFS-2).

3.1 DETERMINE IF PROJECT IS SUBJECT TO CEQA [SECTION 10910(A)]

The City of Stockton Planning Department has determined that the Project is subject to CEQA and satisfies the criteria set forth in Section 10912 of the California Water Code requiring the completion of a WSA. The information contained within this WSA will partially, or in whole, address 2035 General Plan policies PFS-2.1 through PFS 2.13.

3.2 IDENTIFY RESPONSIBLE PUBLIC WATER SYSTEM [SECTION 10910(B)]

The City of Stockton Planning Department has identified COSMUD as the responsible public water system purveyor for the Project. The Planning Department and the COSMA water retailers possess information regarding existing and approved development and pending development applications (i.e., reasonably foreseeable development) within the City of Stockton that may be provided water by one or more of the water retailers, which should be considered in the preparation of this WSA.

3.3 DETERMINE IF 2015 UWMP INCLUDES WATER DEMANDS [SECTION 10910(C)]

The 2015 UWMP adopted for the COSMUD includes all (i.e., assumed build-out for the Project is 2023) of the projected water demand associated with the proposed Project and applied forecasted water supply conditions to 2040. The UWMP also includes COSMUD's preferred methodology in meeting the requirements of SBX7-7 that requires all California state water agencies to develop interim and ultimate urban water use

targets to achieve a statewide 20-percent reduction in water demands per capita by 2020.

COSMUD's water conservation best management practices and dry hydrologic year rationing measures are incorporated into the per capita water demands of the 2015 UWMP (Section 7, Water Shortage Contingency Plan, Page 7-1 of 2015 UWMP). COSMUD's eight Water Demand Management Measures (DMMs) are fully described in the 2015 UWMP (Section 8, Page 8-1.of 2015 UWMP), and are incorporated into COSMUD's overall water demand growth projections illustrated in **Figure 2-2** and **Figure 2-3** in this WSA.

3.3.1 Identify Existing Water Supplies for the Project [Section 10910(d)(1)]

Section 10910(d)(1) requires identification of existing water supply entitlements, water rights, or water service contracts relevant to the Project and quantification of water obtained by the City of Stockton pursuant to those water supply entitlements, water rights, or water service contracts in previous years.

All of COSMUD's existing water supplies are included in the 2015 UWMP (Section 5, Page 5-1 of 2015 UWMP).

3.3.2 Capital Outlay Program for Financing Delivery of Water [Section 10910(d)(2)(B)]

This subsection requires a copy of the capital outlay program for financing the delivery of water to the Project. Groundwater is provided by groundwater wells and surface water is purchased from SEWD. User rates and connection fees pay for COSMUD's water facilities and for a portion of the cost of SEWD facilities, water supply, and services.

COSMUD's water rate is approximately $48 per month based on one-half of an acre-foot per year for a single-family home. This analysis assumes that a uniform rate and connection fee are applied over the entire service area to provide for the needed capital improvements.

The current rate structure for COSMUD assumes that maintenance and operations costs are recovered from revenues generated from quantity and fixed service charges. Since replacement water from the DWSP supplies (i.e., water and infrastructure purchased by existing rate payers that require replacement as a result of regulatory reductions in the amount of available water from SEWD such as the New Melones Project) benefit existing customers, an additional fixed water supply replacement rate component is added to pay for facilities needed to replace lost supplies. Since new-growth customers will also be paying this component, they will share in the replacement water supply costs.

Costs of capacity constructed for new development is borne entirely by new growth through a development fee. Given the balance in water supplies and the dependency

of one supply on the other (i.e., surface water and groundwater) there is no distinction in geographic area on which areas benefit from which supply sources.

3.3.3 Federal, State, and Local Permits Required [Section 10910(d)(2)(C)]

This subsection requires identification of any federal, state, and local permits required for construction of any infrastructure associated with delivering water to the Project.

Any new wells for constructed for growth based on the 2035 General Plan will be added to each of the water purveyor's State Water Resources Control Board Division of Drinking Water (DDW) system permit to serve potable water supplies. The design of those facilities will require coordination with DDW. No other regulatory approvals are anticipated for meeting existing demands plus the Project demands.

3.3.4 Regulatory Approvals Required [Section 10910(d)(2)(D)]

This subsection requires identification of any regulatory approvals required for delivery of the water supply to the Project.

The local groundwater and surface water facilities to serve the Project will be added to the DPH permit to serve potable water supplies within the COSMUD service area. The design of those facilities will require coordination with DPH. No other regulatory approvals are anticipated.

3.4 IDENTIFY POTENTIAL CONFLICTS IN EXERCISING WATER RIGHTS [SECTION 10910(E)]

This section states:

> *If no water has been received in prior years by the public water system,...under the existing water supply entitlements, water rights, or water service contracts [identified to serve the proposed project], the public water system,...shall also include in its water supply assessment pursuant to subdivision (c), an identification of the other public water systems or water service contract holders that receive a water supply or have existing water supply entitlements, water rights, or water service contracts, to the same source of water as the public water system,...has identified as a source of water supply within its water supply assessments.*

The intent of this section is to identify any potential conflicts that may arise from the exercise of an existing water supply entitlement, water right, or water service contract to serve a proposed project if such water supply entitlement, water right, or water service contract has not been previously exercised.

- **Use of Groundwater** – The water demands of the COSMA will be met in part with groundwater. The COSMA urban water retail purveyors have previously exercised their rights as overlying groundwater appropriators to serve the water demands of their customers through above normal, drought, and multiple drought years over the past 20+ years and will continue to exercise those rights to sustainable levels to provide potable water supplies.

- **Use of Surface Water** – The surface water supplies associated with the conjunctive use program fall into three categories: (1) water supplies derived from the Central Valley Project (CVP), (2) interim water supply contracts, and (3) surplus supplies available on an intermittent basis and (4) supplies based on a Water Right Permit(s). Intermittent supplies may be used, if available, but are not considered "firm" and not used in the WSA.

  The parties that could most directly be affected by exercise of these water rights are CVP contractors, State Water Project (SWP) contractors, water rights holders subject to Term 91 conditions, and riparian diverters downstream from the points of diversion for each contract.

3.5 GROUNDWATER ASSESSMENT [SECTION 10910(F)]

The water demands of the Project will be met partially with groundwater. Consequently, Section 10910(f) requires specific additional information.

3.6 SECTION 10910(F)(1)

Section 10910(f)(1) requires a review of groundwater data contained in the UWMP.

The 2015 UWMP identifies past volumes of groundwater extracted by COSMUD (Section 5.2 on Page 5-7 of the 2015 UWMP) and fully describes the COSMUD's past and future use of groundwater as a supply source.

3.6.1 Section 10910(f)(4)

Section 10910(f)(4) requires a description of the projected volume and geographic distribution of groundwater extractions from the basin. For the existing supplies, this is presented in Section 10910(d)(1) above and the location of groundwater wells are represented on **Figure 3-1**.

3.6.2 Section 10910(f)(5)

Section 10910(f)(5) requires an analysis of the sufficiency of the groundwater basin to meet the demands associated with the Project.

This is presented in the 2010 UWMP (Section 5.2, Pages 5-2 through 5-7 of 2015 UWMP).

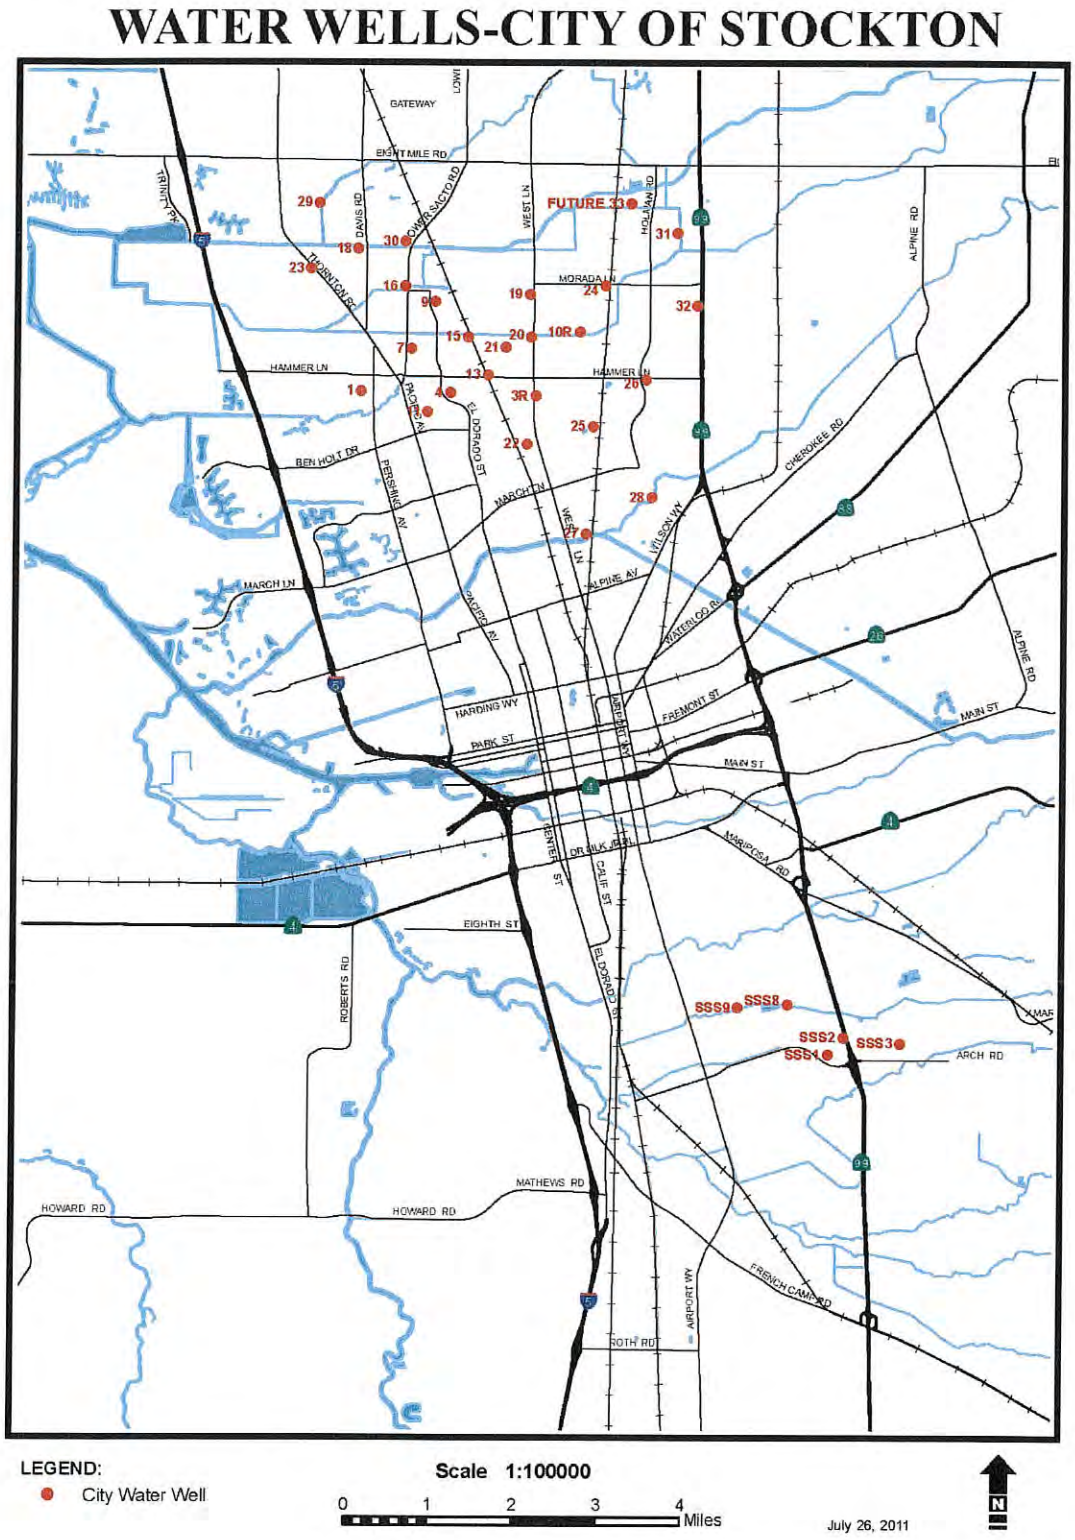

FIGURE 3-1. 2015 LOCATION OF COSMUD MUNICIPAL GROUNDWATER WELLS

4. 0 DETERMINATION OF WATER SUPPLY SUFFICIENCY

This WSA determines that the COSMUD can support the Project based on the 2015 UWMP. COSMUD has shown, without a doubt, that sufficient water supplies exist to meet the Project's build-out water demand as well as all existing and reasonably foreseeable water demands.

COSMUD makes this determination based on the information provided in this WSA and on the following specific facts:

- The existing near-term and long-term reliable supplies of surface water supplies and indigenous groundwater supplies can deliver a sustainable reliable water supply to meet existing and foreseeable water demands without impacting environmental values and/or impacting the current stabilization of the groundwater basin underlying the COSMA.
- The Project water demands will be positively affected by the implementation of COSMUD's eight Demand Management Measure and adherence to SB7-7 (i.e., required statewide 20 percent reduction on a per capita basis by 2020).
- The existing and future use of groundwater supplies has been extensively described in the 2015 UWMP which includes the Groundwater Management Plan for Eastern San Joaquin Groundwater Basin as Appendix "H". All studies show that sufficient groundwater supplies exist.

It should be noted that the determination of sufficiency for this project does not constitute a reservation of supply to serve this project. SB 610 only requires that the Assessment be conducted at the time that the EIR is prepared, and does not require that the Assessment be updated at any point in the future.

Appendix A

Appendix J

Noise Report

Tra Vigne Draft EIR Environmental Noise Assessment

City of Stockton, California

June 18, 2017

jcb Project # 2017-158

Prepared for:

De Novo Planning Group

Attn:
Steve McMurtry
1020 Suncast Lane, Suite 106
El Dorado Hills, California 95762

Prepared by:

j.c. brennan & associates, Inc.

Jim Brennan, INCE
President
Member, Institute of Noise Control Engineering (INCE)

This section provides a general description of the existing noise sources in the Project vicinity, a discussion of the regulatory setting, and identifies potential noise impacts associated with the proposed Project. Project impacts are evaluated relative to applicable noise level criteria and to the existing ambient noise environment. Mitigation measures have been identified for significant noise-related impacts.

3.11.1 ENVIRONMENTAL SETTING

KEY TERMS

Acoustics	The science of sound.
Ambient Noise	The distinctive acoustical characteristics of a given area consisting of all noise sources audible at that location. In many cases, the term ambient is used to describe an existing or pre-project condition such as the setting in an environmental noise study.
Attenuation	The reduction of noise.
A-Weighting	A frequency-response adjustment of a sound level meter that conditions the output signal to approximate human response.
Decibel or dB	Fundamental unit of sound, defined as ten times the logarithm of the ratio of the sound pressure squared over the reference pressure squared.
CNEL	Community noise equivalent level. Defined as the 24-hour average noise level with noise occurring during evening hours (7 to 10 pm) weighted by a factor of three and nighttime hours weighted by a factor of 10 prior to averaging.
Frequency	The measure of the rapidity of alterations of a periodic acoustic signal, expressed in cycles per second or Hertz.
Impulsive	Sound of short duration, usually less than one second, with an abrupt onset and rapid decay.
L_{dn}	Day/Night Average Sound Level. Similar to CNEL but with no evening weighting.
L_{eq}	Equivalent or energy-averaged sound level.
L_{max}	The highest root-mean-square (RMS) sound level measured over a given period of time.
$L_{(n)}$	The sound level exceeded a described percentile over a measurement period. For instance, an hourly L_{50} is the sound level exceeded 50 percent of the time during the one hour period.
Loudness	A subjective term for the sensation of the magnitude of sound.
Noise	Unwanted sound.
SEL	Sound exposure levels. A rating, in decibels, of a discrete event, such as an aircraft flyover or train passby, that compresses the total sound energy into a one-second event.

FUNDAMENTALS OF ACOUSTICS

Acoustics is the science of sound. Sound may be thought of as mechanical energy of a vibrating object transmitted by pressure waves through a medium to human (or animal) ears. If the pressure variations occur frequently enough (at least 20 times per second), then they can be heard and are called sound. The number of pressure variations per second is called the frequency of sound, and is expressed as cycles per second or Hertz (Hz).

Noise is a subjective reaction to different types of sounds. Noise is typically defined as (airborne) sound that is loud, unpleasant, unexpected or undesired, and may therefore be classified as a more specific group of sounds. Perceptions of sound and noise are highly subjective from person to person.

Measuring sound directly in terms of pressure would require a very large and awkward range of numbers. To avoid this, the decibel scale was devised. The decibel scale uses the hearing threshold (20 micropascals), as a point of reference, defined as 0 dB. Other sound pressures are then compared to this reference pressure, and the logarithm is taken to keep the numbers in a practical range. The decibel scale allows a million-fold increase in pressure to be expressed as 120 dB, and changes in levels (dB) correspond closely to human perception of relative loudness.

The perceived loudness of sounds is dependent upon many factors, including sound pressure level and frequency content. However, within the usual range of environmental noise levels, perception of loudness is relatively predictable, and can be approximated by A-weighted sound levels. There is a strong correlation between A-weighted sound levels (expressed as dBA) and the way the human ear perceives sound. For this reason, the A-weighted sound level has become the standard tool of environmental noise assessment. All noise levels reported in this section are in terms of A-weighted levels, but are expressed as dB, unless otherwise noted.

The decibel scale is logarithmic, not linear. In other words, two sound levels 10 dB apart differ in acoustic energy by a factor of 10. When the standard logarithmic decibel is A-weighted, an increase of 10 dBA is generally perceived as a doubling in loudness. For example, a 70 dBA sound is half as loud as an 80 dBA sound, and twice as loud as a 60 dBA sound.

Community noise is commonly described in terms of the ambient noise level, which is defined as the all-encompassing noise level associated with a given environment. A common statistical tool to measure the ambient noise level is the average, or equivalent, sound level (L_{eq}), which corresponds to a steady-state A weighted sound level containing the same total energy as a time varying signal over a given time period (usually one hour). The L_{eq} is the foundation of the composite noise descriptor, L_{dn}, and shows very good correlation with community response to noise.

The day/night average level (L_{dn}) is based upon the average noise level over a 24-hour day, with a +10 decibel weighing applied to noise occurring during nighttime (10:00 pm to 7:00 am) hours. The nighttime penalty is based upon the assumption that people react to nighttime noise exposures as though they were twice as loud as daytime exposures. Because L_{dn} represents a 24-hour average, it

tends to disguise short-term variations in the noise environment. CNEL is similar to L_{dn}, but includes a +5 dB penalty for evening noise. Table 3.11-1 lists several examples of the noise levels associated with common situations.

TABLE 3.11-1: TYPICAL NOISE LEVELS

COMMON OUTDOOR ACTIVITIES	*NOISE LEVEL (DBA)*	*COMMON INDOOR ACTIVITIES*
	--110--	Rock Band
Jet Fly-over at 300 m (1,000 ft)	--100--	
Gas Lawn Mower at 1 m (3 ft)	--90--	
Diesel Truck at 15 m (50 ft), at 80 km/hr (50 mph)	--80--	Food Blender at 1 m (3 ft) Garbage Disposal at 1 m (3 ft)
Noisy Urban Area, Daytime Gas Lawn Mower, 30 m (100 ft)	--70--	Vacuum Cleaner at 3 m (10 ft)
Commercial Area Heavy Traffic at 90 m (300 ft)	--60--	Normal Speech at 1 m (3 ft)
Quiet Urban Daytime	--50--	Large Business Office Dishwasher in Next Room
Quiet Urban Nighttime	--40--	Theater, Large Conference Room (Background)
Quiet Suburban Nighttime	--30--	Library
Quiet Rural Nighttime	--20--	Bedroom at Night, Concert Hall (Background)
	--10--	Broadcast/Recording Studio
Lowest Threshold of Human Hearing	--0--	Lowest Threshold of Human Hearing

EFFECTS OF NOISE ON PEOPLE

The effects of noise on people can be placed in three categories:

- Subjective effects of annoyance, nuisance, and dissatisfaction;
- Interference with activities such as speech, sleep, and learning; and
- Physiological effects such as hearing loss or sudden startling.

Environmental noise typically produces effects in the first two categories. Workers in industrial plants can experience noise in the last category. There is no completely satisfactory way to measure the subjective effects of noise or the corresponding reactions of annoyance and dissatisfaction. A wide variation in individual thresholds of annoyance exists and different tolerances to noise tend to develop based on an individual's past experiences with noise.

Thus, an important way of predicting a human reaction to a new noise environment is the way it compares to the existing environment to which one has adapted: the so-called ambient noise level. In general, the more a new noise exceeds the previously existing ambient noise level, the less acceptable the new noise will be judged by those hearing it. With regard to increases in A-weighted noise level, the following relationships occur:

- Except in carefully controlled laboratory experiments, a 1 dBA change cannot be perceived;
- Outside of the laboratory, a 3 dBA change is considered a just-perceivable difference;
- A change in level of at least 5 dBA is required before any noticeable change in human response would be expected; and

- A 10 dBA change is subjectively heard as approximately a doubling in loudness, and can cause an adverse response.

Stationary point sources of noise – including stationary mobile sources such as idling vehicles – attenuate (lessen) at a rate of approximately 6 dB per doubling of distance from the source, depending on environmental conditions (i.e. atmospheric conditions and either vegetative or manufactured noise barriers, etc.). Widely distributed noises, such as a large industrial facility spread over many acres, or a street with moving vehicles, would typically attenuate at a lower rate.

EXISTING NOISE LEVELS

Existing Land Uses

The Project site consists largely of active agricultural fields (roughly 253 acres in production). Surrounding land uses include some single family residential uses to the north across Eight Mile Road, and some commercial and light industrial at the northeast corner of Eight Mile Road. The Union Pacific Railroad (UPRR) is located to the east, and agricultural land is located to the west and to the south. Pacific Bell and Bragg Investment Company are located within the boundaries of the site at the north-central portion of the site.

Existing Ambient Noise Levels

To quantify the existing ambient noise environment in the Project vicinity, short-term and continuous (24-hour) noise level measurements were conducted on the Project site for the former Bear Creek East Project in 2005, and additional noise measurements were conducted on March 15, 2016. The noise measurement locations are shown on Figure 3.11-1. The noise level measurement survey results are provided in Table 3.11-2. Appendix B of the Noise Report (Appendix F of this EIR) shows the complete results of the continuous noise monitoring at Site A.

TABLE 3.11-2: SUMMARY OF EXISTING BACKGROUND NOISE MEASUREMENT DATA

SITE	LOCATION	L_{DN}	AVERAGE MEASURED HOURLY NOISE LEVELS, dB					
			DAYTIME (7AM-10PM)			NIGHTTIME (10PM-7AM)		
			L_{EQ}	L_{50}	L_{MAX}	L_{EQ}	L_{50}	L_{MAX}
CONTINUOUS (24-HOUR) NOISE LEVEL MEASUREMENTS								
A	90 feet from the UPRR Track	80.1 dB	72.1	51	89	73.9	44	97
SHORT-TERM NOISE LEVEL MEASUREMENTS

Tra Vigne EIR

Figure 1: Location & Measurement Sites

j.c. brennan & associates
consultants in acoustics

Rev. 06/20/17

The sound level meters were programmed to collect hourly noise level intervals at each site during the survey. The maximum value (L_{max}) represents the highest noise level measured during an interval. The average value (L_{eq}) represents the energy average of all of the noise measured during an interval. The median value (L_{50}) represents the sound level exceeded 50 percent of the time during an interval.

Larson Davis Laboratories (LDL) Model 820 precision integrating sound level meters were used for the ambient noise level measurement survey. The meters were calibrated before and after use with an LDL Model CAL200 acoustical calibrator to ensure the accuracy of the measurements. The equipment used meets all pertinent specifications of the American National Standards Institute for Type 1 sound level meters (ANSI S1.4).

EXISTING ROADWAY NOISE LEVELS

To predict existing noise levels due to traffic, the Federal Highway Administration Highway Traffic Noise Prediction Model (FHWA RD-77-108) was used. The model is based upon the Calveno reference noise emission factors for automobiles, medium trucks, and heavy trucks, with consideration given to vehicle volume, speed, roadway configuration, distance to the receiver, and the acoustical characteristics of the site. The FHWA model was developed to predict hourly L_{eq} values for free-flowing traffic conditions.

Traffic volumes for existing conditions were obtained from the traffic study prepared for the Project. Truck percentages and vehicle speeds on the local area roadways were estimated from field observations.

Traffic noise levels are predicted at the sensitive receptors located at the closest typical setback distance along each Project-area roadway segment. Where traffic noise barriers are predominately along a roadway segment, a -5 dB offset was added to the noise prediction model. A -5 dB offset was also applied where outdoor activity areas are shielded by intervening buildings. In some locations, sensitive receptors may be located at distances which vary from the assumed calculation distance and may experience shielding from intervening barriers or sound walls. However, the traffic noise analysis is believed to be representative of the majority of sensitive receptors located closest to the Project-area roadway segments analyzed in this report.

Table 3.11-3 shows the existing traffic noise levels in terms of L_{dn} at the closest sensitive receptors along each roadway segment. A complete listing of the FHWA Model input data is contained in Appendix C of the Noise Report (Appendix F of this EIR).

TABLE 3.11-3: EXISTING TRAFFIC NOISE LEVELS AT A DISTANCE OF 100 FEET

SOURCE: FHWA-RD-77-108 WITH INPUTS FROM KD ANDERSON, AND J.C. BRENNAN & ASSOCIATES, INC. 2016.

EXISTING RAILROAD NOISE LEVELS

Railroad activity within the Project vicinity generally occurs along the UPRR line located near the eastern boundary of the Project site. j.c. brennan & associates, Inc. used previously conducted continuous hourly noise measurements for the Cannery Park Project directly east from the Project site. The noise measurements were conducted adjacent to the railroad tracks for a 24-hour period. The sound level meter was programmed to collect single event noise level data due to train passbys on the Project site, as well as overall hourly noise level data. The noise level measurements were conducted at a distance 90 feet east of the centerline of the railroad track and south of a grade crossing.

Instrumentation consisted of LDL Model 820 precision integrating sound level meters. The systems were calibrated before use with a matching acoustical calibrator to ensure accuracy of the measurements.

The purpose of the noise level measurements was to determine typical sound exposure levels (SEL) for railroad line operations within the Project vicinity, accounting for the effects of travel speed and other factors which may affect noise generation. In addition, the noise measurement equipment was programmed to identify individual train operations, so that the typical number of train operations could be determined.

The results indicated that measured train operations resulted in sound exposure levels (SEL) ranging from 102 dB to 112 dB at a distance of 90 feet. The results also indicated that the typical train operation resulted in a mean SEL of 107.4 dB at a distance of 90 feet from the railroad track centerline. Based upon the noise measurement data, approximately 28 trains per day operate along the track, with approximately 50% of the trains operating during the nighttime hours (10 pm to 7 am) and 50 percent of the trains operating during the daytime hours (7 am to 10 pm). Table 3.11-4 shows the results of the measured noise level, and distances to the railroad noise contours.

TABLE 3.11-4: EXISTING UPRR RAILROAD NOISE LEVELS

L_{DN} AT 90 FEET	DISTANCES TO CONTOURS		
	60 dB L_{dn}	65 dB L_{dn}	70 dB L_{dn}
80 dB L_{dn}	1,969 feet	914 feet	424 feet

SOURCE: J.C. BRENNAN & ASSOCIATES, INC. 2005 AND 2016.

EXISTING INDUSTRIAL NOISE LEVELS

Pacific Bell and Bragg Investment Company are located within the boundaries of the site at the north-central portion of the site. To quantify existing industrial noise levels in the vicinity of the Project site, j.c. brennan & associates, Inc. staff conducted short-term noise level measurements at three locations on the adjacent industrial land uses. Noise levels were generally in the range of 60 dB L_{eq} at a distance of 100 feet. Noise levels associated with the operations included heavy equipment moving about the site and idling equipment.

3.11.2 REGULATORY SETTING

FEDERAL

There are no federal regulations related to noise that apply to the proposed Project.

STATE

California Environmental Quality Act

The California Environmental Quality Act (CEQA) Guidelines, Appendix G, indicate that a significant noise impact may occur if a project exposes persons to noise or vibration levels in excess of local general plans or noise ordinance standards, or cause a substantial permanent or temporary increase in ambient noise levels. CEQA standards are discussed more below under the Thresholds of Significance criteria section.

California State Building Codes

The State Building Code, Title 24, Part 2 of the State of California Code of Regulations establishes uniform minimum noise insulation performance standards to protect persons within new buildings which house people, including hotels, motels, dormitories, apartment houses and dwellings other than single-family dwellings. Title 24 mandates that interior noise levels attributable to exterior sources shall not exceed 45 dB L_{dn} or CNEL in any habitable room.

Title 24 also mandates that for structures containing noise-sensitive uses to be located where the L_{dn} or CNEL exceeds 60 dB, an acoustical analysis must be prepared to identify mechanisms for limiting exterior noise to the prescribed allowable interior levels. If the interior allowable noise levels are met by requiring that windows be kept closed, the design for the structure must also specify a ventilation or air conditioning system to provide a habitable interior environment

CITY OF STOCKTON

City of Stockton General Plan

The following policies of the Stockton General Plan related to noise are applicable to the proposed Project.

Health & Safety Element

NOISE POLICIES

HS-2.1. Sensitive Receptors. The City shall prohibit the development of new commercial, industrial, or other noise-generating land uses adjacent to existing residential uses, and other sensitive noise receptors such as schools, health care facilities, libraries, and churches if noise levels are expected to exceed 70 dBA Community Noise Equivalent (CNEL) (decibels on A-weighted scale CNEL) measured at the property line of the noise sensitive land use.

HS-2.2. Noise Compatibility Guidelines. The City shall allow the development of noise sensitive land uses (which include, but are not limited to, residential neighborhoods, schools, and hospitals) only in areas where existing or projected noise levels are "acceptable" according to Table HS-11.1 [Table 3.11-5 of this report] "Land Use Compatibility for Community Noise Environments." Noise mitigation measures may be required to reduce noise in outdoor activity areas and interior spaces to achieve these levels.

HS-2.11. Limiting Construction Activities. The City shall limit construction activities to the hours of 7:00 am to 7:00 pm, Monday through Saturday. No construction shall occur on Sundays or national holidays without a written permit from the city.

HS-2.12. Sound Attenuation Features. The City shall require sound attenuation features such as walls, berming, heavy landscaping between commercial, industrial, and residential uses to reduce noise and vibration impacts.

HS-2.13. Noise Buffering. The City shall require noise buffering or construction treatments (additional insulation, double paned glass, etc.) in new development that includes noise sensitive uses located near major streets, highways, the airport, railroad tracks, or other significant noise sources.

HS-2.14. State Noise Insulation Standards. The City shall enforce the State Noise Insulation Standards (California Administrative Code, Title 24) and Chapter 35 of the Uniform Building Code.

HS-2.17. Commercial Uses. The City shall require that noise produced by commercial uses not exceed 75 dB L_{dn}/CNEL at the nearest property line.

TABLE 3.11-5: MAXIMUM ALLOWABLE AMBIENT NOISE EXPOSURE BY LAND USE

TABLE HS-11.1 OF THE STOCKTON GENERAL PLAN							
LAND USE TYPE	NOISE LEVELS (L_{DN})						
	0-55	56-60	61-65	66-70	71-75	75-80	>81
Residential							
Hotels, Motels							
Schools, Libraries, Churches, Hospitals, Extended Care Facilities							
Auditoriums, Concert Halls, Amphitheaters							
Sports Arenas, Outdoor Spectator Sports							
Playgrounds, Neighborhood Parks							
Golf Courses, Riding Stables, Water Recreation, Cemeteries							
Office Buildings, Business Commercial and Professional							
Mining, Industrial, Manufacturing, Utilities, Agriculture							
	Normally Acceptable. Specified land use is satisfactory, based on the assumption that any buildings involved are of normal, conventional construction, without any special noise insulation requirements.						
	Conditionally Acceptable. New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and needed insulation features have been included in the design.						
	Unacceptable. New construction or development should not be undertaken.						
If existing noise standards are currently exceeded, a proposed project shall not incrementally increase noise levels by more than 3 dBA.							

Based upon the City of Stockton General Plan Noise Element Policy HS-2.1 outlined above, it would appear that new commercial uses could generate noise levels of up to 70 dB CNEL at existing residential uses. However, new residential uses adjacent to commercial developments would need to comply with the noise level guidelines shown in Table 3.11-5 above, as outlined in Policy HS-2.2. This policy would establish an acceptable exterior noise environment of 60 to 70 dB L_{dn}.

City of Stockton Municipal Code

The City of Stockton Municipal Code Chapter 16, Development Code, contains performance standards for new developments, as shown in Table 3.11-6. Noise generated from the proposed Project is considered stationary noise; therefore, the following standards would apply to the Project.

TABLE 3.11-6: EXTERIOR HOURLY NOISE LEVEL STANDARDS FOR STATIONARY NOISE SOURCES

CHAPTER 16 CITY OF STOCKTON DEVELOPMENT CODE		
Noise Level Descriptor	Maximum Acceptable Noise Level	
	Daytime (7 am - 10 pm)	Nighttime (10 pm - 7 am)
Hourly Leq, dBA	55	45
Maximum Level (Lmax), dBA	75	65

** EACH OF THE NOISE LEVEL STANDARDS SPECIFIED ABOVE SHALL BE REDUCED BY FIVE DBA FOR SIMPLE TONE, NOISE CONSISTING PRIMARILY OF SPEECH OR MUSIC, OR RECURRING IMPULSIVE NOISES.*

SOURCE: CITY OF STOCKTON GENERAL PLAN NOISE ELEMENT, TABLE 1

There are also exemptions to the standards and activities which are considered to be violations that are outlined in the Municipal Code. The following provides a list of the pertinent Municipal Code exemptions and violations:

16-340.020 - ACTIVITIES EXEMPT FROM NOISE REGULATIONS

16-340.020(C) – Outdoor play/school ground activities. Activities conducted on parks and playgrounds and school grounds, between 7:00 am and 10:00 pm, except for additional hours that may be granted by the City Manager. Otherwise, outdoor activities shall meet standards in Table 3-7 (of the Code).

16-340.030 – ACTIVITIES DEEMED VIOLATIONS OF THIS DIVISION

16-340.030(A) – Construction Noise. Operations or causing the operation of tools or equipment on private property used in alteration, construction, demolition, drilling, or repair work between the hours of 10:00 pm and 7:00 am, so that the sound creates a noise disturbance across a residential property line, except for emergency work of public service utilities.

16-340.030(B) – Loading and unloading operations. Loading, unloading, opening, closing or other handling of boxes, crates, containers, building materials, garbage cans, or similar objects on private property between the hours of 10:00 pm and 7:00 am in a manner to cause a noise disturbance.

16-340.030(F) – Sweepers and associated equipment. Operating or allowing the operation of sweepers or associated sweeping equipment (e.g., blowers) on private property between the hours of 10:00 pm and 7:00 am the following day in, or adjacent to, a residential zoning district.

16-340.040 – STANDARDS

16-340.040(B)(2)(c) – Adjacent to other uses. If commercial, industrial, or public facilities land uses are adjacent to any noise-sensitive land uses or vacant residential (RE,RL,RM, or RH) or open space (OS) zoning districts, these uses shall comply with the performance standards contained in Table 3-7, Part II.

VIBRATION STANDARDS

Vibration is like noise in that it involves a source, a transmission path, and a receiver. While vibration is related to noise, it differs in that in that noise is generally considered to be pressure waves transmitted through air, whereas vibration usually consists of the excitation of a structure or surface. As with noise, vibration consists of an amplitude and frequency. A person's perception to the vibration will depend on their individual sensitivity to vibration, as well as the amplitude and frequency of the source and the response of the system which is vibrating.

Vibration can be measured in terms of acceleration, velocity, or displacement. A common practice is to monitor vibration measures in terms of peak particle velocities in inches per second. Standards pertaining to perception as well as damage to structures have been developed for vibration levels defined in terms of peak particle velocities.

The City of Stockton does not have specific policies pertaining to vibration levels. However, vibration levels associated with construction are addressed as potential vibration impacts associated with Project implementation.

Human and structural response to different vibration levels is influenced by a number of factors, including ground type, distance between source and receptor, duration, and the number of perceived vibration events. Table 3.11-7 indicates that the threshold for damage to structures ranges from 2 to 6 peak particle velocity in inches per second (in/sec p.p.v). One-half this minimum threshold or 1 in/sec p.p.v. is considered a safe criterion that would protect against architectural or structural damage. The general threshold at which human annoyance could occur is noted as 0.1 in/sec p.p.v.

TABLE 3.11-7: EFFECTS OF VIBRATION ON PEOPLE AND BUILDINGS

PEAK PARTICLE VELOCITY		*HUMAN REACTION*	*EFFECT ON BUILDINGS*
MM/SEC.	*IN./SEC.*		
0.15-0.30	0.006-0.019	Threshold of perception; possibility of intrusion	Vibrations unlikely to cause damage of any type
2.0	0.08	Vibrations readily perceptible	Recommended upper level of the vibration to which ruins and ancient monuments should be subjected
2.5	0.10	Level at which continuous vibrations begin to annoy people	Virtually no risk of "architectural" damage to normal buildings
5.0	0.20	Vibrations annoying to people in buildings (this agrees with the levels established for people standing on bridges and subjected to relative short periods of vibrations)	Threshold at which there is a risk of "architectural" damage to normal dwelling - houses with plastered walls and ceilings. Special types of finish such as lining of walls, flexible ceiling treatment, etc., would minimize "architectural" damage
10-15	0.4-0.6	Vibrations considered unpleasant by people subjected to continuous vibrations and unacceptable to some people walking on bridges	Vibrations at a greater level than normally expected from traffic, but would cause "architectural" damage and possibly minor structural damage.

SOURCE: CALTRANS. TRANSPORTATION RELATED EARTHBORN VIBRATIONS. TAV-02-01-R9601 FEBRUARY 20, 2002.

3.11.3 IMPACTS AND MITIGATION MEASURES

THRESHOLDS OF SIGNIFICANCE

Consistent with Appendix G of the CEQA Guidelines, the Project will have a significant impact related to noise if it will result in:

- Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies;
- Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels;
- A substantial permanent increase in ambient noise levels in the Project vicinity above levels existing without the Project;
- A substantial temporary or periodic increase in ambient noise levels in the Project vicinity above levels existing without Project;
- For a Project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, expose people residing or working in the Project area to excessive noise levels within two miles of a public airport or public use airport; or
- For a Project within the vicinity of a private airstrip, expose people residing or working in the Project area to excessive noise levels.

The Project site is not located within two miles of a public or private airport or airstrip. The nearest public airport or public use airport, the Lodi Airpark, is located approximately 2.0 miles north of the Project site. Additionally, the Kingdon Executive Airport is located approximately 3.84 miles northwest of the Project site. Therefore, airport and airport noise is not discussed further in this analysis.

Determination of a Significant Increase in Noise Levels

California Environmental Quality Act (CEQA) guidelines define a significant impact of a project if it "increases substantially the ambient noise levels for adjoining areas". The City of Stockton General Plan Health and Safety Element (Section 11.2, Noise) provides specific guidance for assessing increases in ambient noise. As described previously, Table 3.11-5 identifies the maximum allowable ambient noise exposure by land use within the City of Stockton.

> *Additionally, in making a determination of impact If existing noise standards are currently exceeded, a substantial increase will occur if ambient noise levels are incrementally increased by 3 dB or more.*

IMPACTS AND MITIGATION MEASURES

Impact 3.11-1: The proposed Project will not result in a significant increase in traffic noise levels at existing receptors. (Less than Significant)

Proposed Project:

Table 3.11-8 shows the predicted traffic noise level increases on the local roadway network for Existing and Cumulative Project and No Project conditions. Appendix C of the Noise Report (Appendix F of this EIR) provides the complete inputs and results of the FHWA traffic noise modeling.

Some noise sensitive receptors located along the Project-area roadways are currently exposed to exterior traffic noise levels exceeding the City of Stockton 60 dB L_{dn} exterior noise level standard for residential uses, as shown in Table 3.11-8. As shown in Table 3.11-8, these receptors will continue to experience elevated exterior noise levels with implementation of the proposed Project. The proposed Project's contribution to traffic noise increases is predicted to range between -1 dBA L_{dn} and +2 dBA L_{dn}. This will not exceed the City's substantial increase criteria of 3 dB. Therefore, impacts associated with traffic noise levels at existing receptors as a result of the proposed Project would be **less than significant**.

TABLE 3.11-8: EXISTING APPROVED PROJECT AND CUMULATIVE TRAFFIC NOISE LEVELS (PROPOSED PROJECT)

ROADWAY	SEGMENT	NOISE LEVELS (L_{DN}, dB) AT NEAREST SENSITIVE RECEPTORS					
		EXISTING + APPROVED	EXISTING + APPROVED + TRA VIGNE	CHANGE	CUMULATIVE NO PROJECT	CUMULATIVE + TRA VIGNE	CHANGE

SOURCE: J.C. BRENNAN & ASSOCIATES, INC. 2016 & 2017.

No Build Alternative:

Under the No Build Alternative, development of the Project site would not occur, and the Project site would remain in its current condition.

Table 3.11-9 shows the predicted traffic noise level increases on the local roadway network for Existing and Cumulative Project and No Project conditions, for the No Build Alternative. Appendix C of the Noise Report (Appendix F of this EIR) provides the complete inputs and results of the FHWA traffic noise modeling.

As noted previously, some noise sensitive receptors located along the Project-area roadways are currently exposed to exterior traffic noise levels exceeding the City of Stockton 60 dB L_{dn} exterior noise level standard for residential uses, as shown in Table 3.11-9. As shown in Table 3.11-9, these receptors will continue to experience elevated exterior noise levels with implementation of the No Build Alternative. The No Build Alternative would not contribute to traffic noise increases. As such, **no impact** would occur, and no mitigation is required. Compared to the proposed Project, this alternative is environmentally superior relative to this topic.

TABLE 3.11-9: EXISTING APPROVED PROJECT AND CUMULATIVE TRAFFIC NOISE LEVELS (NO BUILD ALTERNATIVE)

ROADWAY	SEGMENT	NOISE LEVELS (L_{DN}, dB) AT NEAREST SENSITIVE RECEPTORS					
		EXISTING + APPROVED	EXISTING + APPROVED + NO BUILD	CHANGE	CUMULATIVE NO PROJECT	CUMULATIVE + NO BUILD	CHANGE
Eight Mile Road	Lower Sacramento Rd. to Davis Rd.	67	67	0	70	70	0
	Lower Sacramento Rd. to West Ln.	68	68	0	71	72	+1

SOURCE: J.C. BRENNAN & ASSOCIATES, INC. 2016 & 2017.

With Bridge Alternative:

Under the With Bridge Alternative, the Project site would be developed with similar land use designations and circulation facilities as the proposed Project. However, unlike the proposed Project, this alternative would include construction of the bridge crossing over Bear Creek associated with what is shown on the Future Roadways Map as an extension of Marlette Road from the west through the Project site and ultimately traveling eastward through the Bear Creek South project to Holman Road.

This alternative would result in the same number of HDR units as the proposed Project (340 units), and would reduce the number of LDR units from 1,073 under the proposed Project to 1,066 units, for a total of 1,406 units. This would result in a reduction of seven units when compared to the proposed Project. Additionally, this alternative would dedicate an equal amount of commercial and non-traditional park areas as the proposed Project, and would increase the amount of traditional park area from 15.07 acres under the proposed Project to 15.37 acres. The anticipated commercial uses and utility improvements under the With Bridge Alternative would be similar to the proposed Project.

This alternative also establishes a site for a 14.7-acre K-8 school to be developed by the LUSD at their discretion. If the LUSD decides to not pursue building a school at this site then the site would be developed for residential in accordance with the General Plan land use designation which would result in the construction an additional 90 units in place of the school. Under this variation, the total residential units would increase from 1,406 to 1,496 units. The balance of the Project site would be developed as proposed under the Proposed Project.

Table 3.11-10 shows the predicted traffic noise level increases on the local roadway network for Existing and Cumulative Bridge Alternative and No Project conditions, for the Bridge Alternative. Appendix C of the Noise Report (Appendix F of this EIR) provides the complete inputs and results of the FHWA traffic noise modeling.

As noted previously, some noise sensitive receptors located along the Project-area roadways are currently exposed to exterior traffic noise levels exceeding the City of Stockton 60 dB L_{dn} exterior noise level standard for residential uses, as shown in Table 3.11-10. As shown in Table 3.11-10, these receptors will continue to experience elevated exterior noise levels with implementation of the With Bridge Alternative. The Bridge Alternative contribution to traffic noise increases is predicted to range between 0 dBA L_{dn} and +2 dBA L_{dn}. This will not exceed the City's substantial increase criteria of 3 dB. Therefore, impacts associated with traffic noise levels at existing receptors as a result of the proposed Project would be **less than significant**. Compared to the proposed Project, this alternative is considered to be similar in traffic noise impacts.

General Plan 2035 Alternative:

Under the General Plan 2035 Alternative, the Project site would be developed with the same land use designations and circulation facilities as described in the City's General Plan 2035. This alternative would not require a General Plan amendment. The balance of the Project site would be developed as proposed under the proposed Project. Under this alternative, the high density residential area would be decreased from 11.7 acres under the proposed Project to 10.67 acres. Additionally, the commercial area would be decreased from 10.5 acres under the proposed Project to 9.0 acres. This alternative would not include dedication of an K-8 school site. This alternative would include construction of the bridge crossing over Bear Creek, which is currently reflected in the Circulation Element of the General Plan 2035. The bridge crossing would change the trip distribution when compared to the proposed Project by providing an alternative access way to the south.

Table 3.11-11 shows the predicted traffic noise level increases on the local roadway network for Existing and Cumulative Project and No Project conditions for the General Plan 2035 Alternative. Appendix C of the Noise Report (Appendix F of this EIR) provides the complete inputs and results of the FHWA traffic noise modeling.

As noted previously, some noise sensitive receptors located along the Project-area roadways are currently exposed to exterior traffic noise levels exceeding the City of Stockton 60 dB L_{dn} exterior noise level standard for residential uses, as shown in Table 3.11-11. As shown in Table 3.11-11, these receptors will continue to experience elevated exterior noise levels with implementation of the General Plan 2035 Alternative. The General Plan 2035 Alternative contribution to traffic noise increases is predicted to range between +1 dBA L_{dn} and +2 dBA L_{dn}. This will not exceed the City's substantial increase criteria of 3 dB. Therefore, impacts associated with traffic noise levels at existing receptors as a result of the General Plan 2035 Alternative would be **less than significant**. Compared to the proposed Project, this alternative is equal relative to this topic.

Reduced Project Alternative:

Under the Reduced Project Alternative, the Project site would be developed with the same components as the proposed Project, but the area utilized for the development would be reduced by approximately 33 percent. The total Project site would be reduced by approximately 106.2 acres, and the existing 15.57-acre industrial area would be eliminated from the Project site. This approximately 197.05-acre alternative would result in up to 715 LDR units (with school) to 805 LDR units (without school) and up to 226 HDR units (with or without school), for a total of 941 units (with school) to 1,031 units (without school). This would result in a reduction of 472 (with or without school) units when compared to the proposed Project. The 10.5-acre commercial area in the northwest portion of the Project site would be eliminated. This would eliminate a 70,000-sf grocery store, 22,000 sf of retail shops, a 3,500-sf quick service restaurant, a 3,500-sf convenience store with attached fueling facility, and a 2,500-sf wine tasting room. This alternative would still establish a site for a 14.7-acre K-8 school to be developed by the LUSD. However, if the LUSD decides against the K-8 school siting, the area will instead include the development of single family residential units.

Table 3.11-12 shows the predicted traffic noise level increases on the local roadway network for Existing and Cumulative Project and No Project conditions for the Reduced Project Alternative. Appendix C of the Noise Report (Appendix F of this EIR) provides the complete inputs and results of the FHWA traffic noise modeling.

As noted previously, some noise sensitive receptors located along the Project-area roadways are currently exposed to exterior traffic noise levels exceeding the City of Stockton 60 dB L_{dn} exterior noise level standard for residential uses, as shown in Table 3.11-12. As shown in Table 3.11-12, these receptors will continue to experience elevated exterior noise levels with implementation of the Reduced Project Alternative. The Reduced Project Alternative contribution to traffic noise increases is predicted to range between -1 dBA L_{dn} and +1 dBA L_{dn}. This will not exceed the City's substantial increase criteria of 3 dB. Therefore, impacts associated with traffic noise levels at existing receptors as a result of the Reduced Project Alternative would be **less than significant**. Compared to the proposed Project, this alternative is equal relative to this topic.

TABLE 3.11-12: EXISTING APPROVED PROJECT AND CUMULATIVE TRAFFIC NOISE LEVELS (REDUCED PROJECT ALTERNATIVE)

ROADWAY	SEGMENT	NOISE LEVELS (L_{DN}, dB) AT NEAREST SENSITIVE RECEPTORS

Reduced Intensity/Density Alternative:

Under the Reduced Intensity/Density Alternative, the Project site would be developed with a reduction in the overall project intensity/density while maintaining the approximate overall project footprint. For the purposes of discussion, this option considers a 20 percent reduction in the intensity/density of the project while maintaining the approximately 318.82-acre project footprint. Typical residential lots would increase from 5,000 to 6,000 sf to 6,000 to 7,400 sf. This alternative would result in up to 858 LDR units (with school) to 930 LDR units (without school) and up to 272 HDR units (with or without school), for a total of 1,130 units (with school) to 1,202 units (without school). The 10.5-acre commercial area in the northwest portion of the project site would be eliminated. This would eliminate a 70,000 square foot grocery store, 22,000 square feet of retail shops, a 3,500 square foot quick service restaurant, a 3,500 square foot convenience store with attached fueling facility, and a 2,500 square foot wine tasting room. This alternative would still establish a site for a 14.7-acre K-8school to be developed by the LUSD. However, if the LUSD decides against the elementary school siting, the area will instead include the development of single family residential units.

Table 3.11-13 shows the predicted traffic noise level increases on the local roadway network for existing and cumulative Project and no Project conditions for the Reduced Intensity/Density Alternative. Appendix C of the Noise Report (Appendix F of this EIR) provides the complete inputs and results of the FHWA traffic noise modeling.

As noted previously, some noise sensitive receptors located along the Project-area roadways are currently exposed to exterior traffic noise levels exceeding the City of Stockton 60 dB L_{dn} exterior noise level standard for residential uses, as shown in Table 3.11-13. As shown in Table 3.11-13, these receptors will continue to experience elevated exterior noise levels with implementation of the Reduced Intensity/Density Alternative. The Reduced Intensity/Density Alternative contribution to traffic noise increases is predicted to range between -1 dBA L_{dn} and +1 dBA L_{dn}. This will not exceed the City's substantial increase criteria of 3 dB. Therefore, impacts associated with traffic noise levels at existing receptors as a result of the Reduced Intensity/Density Alternative would be **less than significant**. Compared to the proposed Project, this alternative is equal relative to this topic.

Impact 3.11-2: The proposed Project has the potential to increase noise levels associated with construction activities. (Less than Significant with Mitigation)

Proposed Project:

During the construction of the Project, including roads, water and sewer lines and related infrastructure, noise from construction activities would add to the noise environment in the Project vicinity. Activities involved in construction would generate maximum noise levels, as indicated in Table 3.11-14, ranging from 76 to 90 dB at a distance of 50 feet. Construction activities would be temporary in nature and are anticipated to occur during normal daytime working hours.

TABLE 3.11-14: CONSTRUCTION EQUIPMENT NOISE

TYPE OF EQUIPMENT	*MAXIMUM LEVEL, DB AT 50 FEET*
Backhoe	78
Compactor	83
Compressor (air)	78
Concrete Saw	90
Dozer	82
Dump Truck	76
Excavator	81
Generator	81
Jackhammer	89
Pneumatic Tools	85

SOURCE: ROADWAY CONSTRUCTION NOISE MODEL USER'S GUIDE. FEDERAL HIGHWAY ADMINISTRATION. FHWA-HEP-05-054. JANUARY 2006.

Noise would also be generated during the construction phase by increased truck traffic on area roadways associated with transport of heavy materials and equipment to and from construction sites. This noise increase would be of short duration, and would likely occur primarily during daytime hours.

Construction activities would be temporary in nature and are exempt from noise regulation during the hours of 7:00 am to 7:00 pm as outlined in the City's General Plan Noise Element and Municipal Code. Implementation of the following mitigation measures will ensure that these potential impacts are reduced to a **less than significant** level.

MITIGATION MEASURES

Mitigation Measure 3.11-1: *Construction activities shall adhere to the requirements of the City of Stockton General Plan and Municipal Code with respect to hours of operation.*

Mitigation Measure 3.11-2: *All equipment shall be fitted with factory equipped mufflers, and in good working order.*

With Bridge Alternative

As noted above, under the With Bridge Alternative, the Project site would be developed with similar land use designations and circulation facilities as the proposed Project. However, unlike the proposed Project, this alternative would include construction of the bridge crossing over Bear Creek associated with what is shown on the Future Roadways Map as an extension of Marlette Road from the west through the Project site and ultimately traveling eastward through the Bear Creek South project to Holman Road.

During the construction of the alternative including roads, water and sewer lines, construction of the bridge and related infrastructure, noise from construction activities would add to the noise environment in the Project vicinity. Activities involved in construction would generate maximum noise levels, as indicated in Table 3.11-14, ranging from 76 to 90 dB at a distance of 50 feet. Construction activities would be temporary in nature and are anticipated to occur during normal daytime working hours.

Noise would also be generated during the construction phase by increased truck traffic on area roadways associated with transport of heavy materials and equipment to and from construction sites. This noise increase would be of short duration, and would likely occur primarily during daytime hours.

Construction activities would be temporary in nature and are exempt from noise regulation during the hours of 7:00 am to 7:00 pm as outlined in the City's General Plan Noise Element and Municipal Code. Implementation of the same mitigation measures as the proposed Project will ensure that these potential impacts are reduced to a **less than significant** level. Compared to the proposed Project, this alternative is equal relative to this topic.

No Build Alternative:

Development of the Project site would not occur under the No Build Alternative, and the Project site would remain in its current condition. The No Build Alternative would not result in additional construction activities. As such, **no impact** would occur, and no mitigation is required. Compared to the proposed Project, this alternative is environmentally superior relative to this topic.

General Plan 2035 Alternative:

Under the General Plan 2035 Alternative, the Project site would be developed with the same land use designations and circulation facilities as described in the City's General Plan 2035. This alternative would not require a General Plan amendment. The balance of the Project site would be developed as proposed under the proposed Project. Under this alternative, the high density residential area would be decreased from 11.7 acres under the proposed Project to 10.67 acres. Additionally, the commercial area would be decreased from 10.5 acres under the proposed Project to 9.0 acres. This alternative would not include dedication of an K-8 school site. This alternative would include construction of the bridge crossing over Bear Creek, which is currently reflected in

the Circulation Element of the General Plan 2035. The bridge crossing would change the trip distribution when compared to the proposed Project by providing an alternative access way to the south.

During the construction of the alternative including roads, water and sewer lines and related infrastructure, noise from construction activities would add to the noise environment in the Project vicinity. Activities involved in construction would generate maximum noise levels, as indicated in Table 3.11-14, ranging from 76 to 90 dB at a distance of 50 feet. Construction activities would be temporary in nature and are anticipated to occur during normal daytime working hours.

Noise would also be generated during the construction phase by increased truck traffic on area roadways associated with transport of heavy materials and equipment to and from construction sites. This noise increase would be of short duration, and would likely occur primarily during daytime hours.

Construction activities would be temporary in nature and are exempt from noise regulation during the hours of 7:00 am to 7:00 pm as outlined in the City's General Plan Noise Element and Municipal Code. Implementation of the same mitigation measures as the proposed Project will ensure that these potential impacts are reduced to a **less than significant** level. Compared to the proposed Project, this alternative is equal relative to this topic.

Reduced Project Alternative:

Under the Reduced Project Alternative, the Project site would be developed with the same components as the proposed Project, but the area utilized for the development would be reduced by approximately 33 percent. The total Project site would be reduced by approximately 106.2 acres, and the existing 15.57-acre industrial area would be eliminated from the Project site. This approximately 197.05-acre alternative would result in up to 715 LDR units (with school) to 805 LDR units (without school) and up to 226 HDR units (with or without school), for a total of 941 units (with school) to 1,031 units (without school). This would result in a reduction of 472 (with or without school) units when compared to the proposed Project. The 10.5-acre commercial area in the northwest portion of the Project site would be eliminated. This would eliminate a 70,000-sf grocery store, 22,000 sf of retail shops, a 3,500-sf quick service restaurant, a 3,500-sf convenience store with attached fueling facility, and a 2,500-sf wine tasting room. This alternative would still establish a site for a 14.7-acre K-8 school to be developed by the LUSD. However, if the LUSD decides against the K-8 school siting, the area will instead include the development of single family residential units.

During the construction of the alternative including roads, water and sewer lines and related infrastructure, noise from construction activities would add to the noise environment in the Project vicinity. Activities involved in construction would generate maximum noise levels, as indicated in Table 3.11-14, ranging from 76 to 90 dB at a distance of 50 feet. Construction activities would be temporary in nature and are anticipated to occur during normal daytime working hours.

Noise would also be generated during the construction phase by increased truck traffic on area roadways associated with transport of heavy materials and equipment to and from construction sites. This noise increase would be of short duration, and would likely occur primarily during daytime hours.

Construction activities would be temporary in nature and are exempt from noise regulation during the hours of 7:00 am to 7:00 pm as outlined in the City's General Plan Noise Element and Municipal Code. Implementation of the same mitigation measures as the proposed Project will ensure that these potential impacts are reduced to a **less than significant** level. Compared to the proposed Project, this alternative is equal relative to this topic.

Reduced Intensity/Density Alternative:

Under the Reduced Intensity/Density Alternative, the Project site would be developed with a reduction in the overall project intensity/density while maintaining the approximate overall project footprint. For the purposes of discussion, this option considers a 20 percent reduction in the intensity/density of the project while maintaining the approximately 318.82-acre project footprint. Typical residential lots would increase from 5,000 to 6,000 sf to 6,000 to 7,400 sf. This alternative would result in up to 858 LDR units (with school) to 930 LDR units (without school) and up to 272 HDR units (with or without school), for a total of 1,130 units (with school) to 1,202 units (without school). The 10.5-acre commercial area in the northwest portion of the project site would be eliminated. This would eliminate a 70,000 square foot grocery store, 22,000 square feet of retail shops, a 3,500 square foot quick service restaurant, a 3,500 square foot convenience store with attached fueling facility, and a 2,500 square foot wine tasting room. This alternative would still establish a site for a 14.7-acre K-8school to be developed by the LUSD. However, if the LUSD decides against the elementary school siting, the area will instead include the development of single family residential units.

During the construction of the alternative including roads, water and sewer lines and related infrastructure, noise from construction activities would add to the noise environment in the Project vicinity. Activities involved in construction would generate maximum noise levels, as indicated in Table 3.11-14, ranging from 76 to 90 dB at a distance of 50 feet. Construction activities would be temporary in nature and are anticipated to occur during normal daytime working hours.

Noise would also be generated during the construction phase by increased truck traffic on area roadways associated with transport of heavy materials and equipment to and from construction sites. This noise increase would be of short duration, and would likely occur primarily during daytime hours.

Construction activities would be temporary in nature and are exempt from noise regulation during the hours of 7:00 am to 7:00 pm as outlined in the City's General Plan Noise Element and Municipal Code. Implementation of the same mitigation measures as the proposed Project will

ensure that these potential impacts are reduced to a **less than significant** level. Compared to the proposed Project, this alternative is equal relative to this topic.

Impact 3.11-3: The proposed Project has the potential to increase vibration association with construction activities. (Less than Significant)

Proposed Project:

The primary vibration-generating activities associated with the proposed Project would occur during construction when activities such as grading, utilities placement, and parking lot construction occur. Sensitive receptors which could be impacted by construction related vibrations, especially vibratory compactors/rollers, are located approximately 100 feet or further from the Project area. At this distance, construction vibrations are not predicted to exceed acceptable levels. Additionally, construction activities would be temporary in nature and would likely occur during normal daytime working hours.

Construction vibration impacts include human annoyance and building structural damage. Human annoyance occurs when construction vibration rises significantly above the threshold of perception. Building damage can take the form of cosmetic or structural. Table 3.11-15 shows the typical vibration levels produced by construction equipment.

TABLE 3.11-15: VIBRATION LEVELS FOR VARYING CONSTRUCTION EQUIPMENT

TYPE OF EQUIPMENT	PEAK PARTICLE VELOCITY @ 25 FEET (INCHES/SECOND)	PEAK PARTICLE VELOCITY @ 100 FEET (INCHES/SECOND)
Large Bulldozer	0.089	0.011
Loaded Trucks	0.076	0.010
Small Bulldozer	0.003	0.000
Auger/drill Rigs	0.089	0.011
Jackhammer	0.035	0.004
Vibratory Hammer	0.070	0.009
Vibratory Compactor/roller	0.210	0.026

SOURCE: FEDERAL TRANSIT ADMINISTRATION, TRANSIT NOISE AND VIBRATION IMPACT ASSESSMENT GUIDELINES, MAY 2006

Table 3.11-15 data indicate that construction vibration levels anticipated for the Project are less than the 0.1 in/sec criteria at distances of 50 feet. Therefore, construction vibrations are not predicted to cause damage to existing buildings or cause annoyance to sensitive receptors. Implementation of the proposed Project would have a **less than significant** impact relative to this environmental topic.

With Bridge Alternative:

Under the With Bridge Alternative, the site would be developed similar to the Proposed Project Alternative, with the exception of construction of the bridge over Bear Creek.

As noted previously, construction vibration impacts include human annoyance and building structural damage. Human annoyance occurs when construction vibration rises significantly above

the threshold of perception. Building damage can take the form of cosmetic or structural. Table 3.11-15 shows the typical vibration levels produced by construction equipment.

Table 3.11-15 data indicate that construction vibration levels anticipated for the With Bridge Alternative are less than the 0.1 in/sec criteria at distances of 50 feet. Therefore, construction vibrations are not predicted to cause damage to existing buildings or cause annoyance to sensitive receptors. Implementation of the With Bridge Alternative would have a **less than significant** impact relative to this environmental topic. Compared to the proposed Project, this alternative is equal relative to this topic.

No Build Alternative:

Under the No Build Alternative, development of the Project site would not occur, and the Project site would remain in its current condition. The No Build Alternative would not result in additional construction activities. As such, **no impact** would occur, and no mitigation is required. Compared to the proposed Project, this alternative is environmentally superior relative to this topic.

General Plan 2035 Alternative:

Under the General Plan 2035 Alternative, the entire 318.82-acre Project site would be developed with residential and commercial land uses.

As noted previously, construction vibration impacts include human annoyance and building structural damage. Human annoyance occurs when construction vibration rises significantly above the threshold of perception. Building damage can take the form of cosmetic or structural. Table 3.11-15 shows the typical vibration levels produced by construction equipment.

Table 3.11-15 data indicate that construction vibration levels anticipated for the General Plan 2035 Alternative are less than the 0.1 in/sec criteria at distances of 50 feet. Therefore, construction vibrations are not predicted to cause damage to existing buildings or cause annoyance to sensitive receptors. Implementation of the General Plan 2035 Alternative would have a **less than significant** impact relative to this environmental topic. Compared to the proposed Project, this alternative is equal relative to this topic.

Reduced Project Alternative:

Under the Reduced Project Alternative, the Project site would be developed with the same components as the proposed Project, but the area utilized for the development would be reduced by approximately 33 percent. The total Project site would be reduced by approximately 106.2 acres, and the existing 15.57-acre industrial area would be eliminated from the Project site. This approximately 197.05-acre alternative would result in up to 715 LDR units (with school) to 805 LDR units (without school) and up to 226 HDR units (with or without school), for a total of 941 units (with school) to 1,031 units (without school). This would result in a reduction of 472 (with or without school) units when compared to the proposed Project. The 10.5-acre commercial area in the northwest portion of the Project site would be eliminated. This would eliminate a 70,000-sf

grocery store, 22,000 sf of retail shops, a 3,500-sf quick service restaurant, a 3,500-sf convenience store with attached fueling facility, and a 2,500-sf wine tasting room. This alternative would still establish a site for a 14.7-acre K-8 school to be developed by the LUSD. However, if the LUSD decides against the K-8 school siting, the area will instead include the development of single family residential units.

As noted previously, construction vibration impacts include human annoyance and building structural damage. Human annoyance occurs when construction vibration rises significantly above the threshold of perception. Building damage can take the form of cosmetic or structural. Table 3.11-15 shows the typical vibration levels produced by construction equipment.

Table 3.11-15 data indicate that construction vibration levels anticipated for the Reduced Project Alternative are less than the 0.1 in/sec criteria at distances of 50 feet. Therefore, construction vibrations are not predicted to cause damage to existing buildings or cause annoyance to sensitive receptors. Implementation of the Reduced Project Alternative would have a **less than significant** impact relative to this environmental topic. Compared to the proposed Project, this alternative is equal relative to this topic.

Reduced Intensity/Density Alternative:

Under the Reduced Intensity/Density Alternative, the Project site would be developed with a reduction in the overall project intensity/density while maintaining the approximate overall project footprint. For the purposes of discussion, this option considers a 20 percent reduction in the intensity/density of the project while maintaining the approximately 318.82-acre project footprint. Typical residential lots would increase from 5,000 to 6,000 sf to 6,000 to 7,400 sf. This alternative would result in up to 858 LDR units (with school) to 930 LDR units (without school) and up to 272 HDR units (with or without school), for a total of 1,130 units (with school) to 1,202 units (without school). The 10.5-acre commercial area in the northwest portion of the project site would be eliminated. This would eliminate a 70,000 square foot grocery store, 22,000 square feet of retail shops, a 3,500 square foot quick service restaurant, a 3,500 square foot convenience store with attached fueling facility, and a 2,500 square foot wine tasting room. This alternative would still establish a site for a 14.7-acre K-8school to be developed by the LUSD. However, if the LUSD decides against the elementary school siting, the area will instead include the development of single family residential units.

As noted previously, construction vibration impacts include human annoyance and building structural damage. Human annoyance occurs when construction vibration rises significantly above the threshold of perception. Building damage can take the form of cosmetic or structural. Table 3.11-15 shows the typical vibration levels produced by construction equipment.

Table 3.11-15 data indicate that construction vibration levels anticipated for the Reduced Intensity/Density Alternative are less than the 0.1 in/sec criteria at distances of 50 feet. Therefore, construction vibrations are not predicted to cause damage to existing buildings or cause annoyance to sensitive receptors. Implementation of the Reduced Intensity/Density Alternative

would have a **less than significant** impact relative to this environmental topic. Compared to the proposed Project, this alternative is equal relative to this topic.

Impact 3.11-4: The proposed Project has the potential to expose new sensitive receptors to excessive traffic noise. (Less than Significant with Mitigation)

The FHWA traffic noise prediction model was used to predict Cumulative + Project traffic noise levels at the proposed residential land uses associated with the Project. Table 3.11-16 shows the predicted traffic noise levels at the proposed residential uses adjacent to the major Project-area arterial roadways. Table 3.11-16 also indicates the property line noise barrier heights required to achieve compliance with an exterior noise level standard of 60 dB L_{dn}.

TABLE 3.11-16: CUMULATIVE + PROJECT TRANSPORTATION NOISE LEVELS AT PROPOSED RESIDENTIAL USES

ROADWAY	RECEPTOR DESCRIPTION	APPROXIMATE RESIDENTIAL SETBACK, FEET[1]	ADT	PREDICTED TRAFFIC NOISE LEVELS, DB L_{DN}[2]			
				NO WALL	8' WALL	10' WALL	11' WALL
Eight Mile Road	Backyards	75	65,464	71	64	60	60
West Lane	Backyards	75	48,318	71	63	61	60

[1] *SETBACK DISTANCES ARE MEASURED IN FEET FROM THE CENTERLINES OF THE ROADWAYS TO THE CENTER OF RESIDENTIAL BACKYARDS.*

[2] *THE MODELED NOISE BARRIERS ASSUME FLAT SITE CONDITIONS WHERE ROADWAY ELEVATIONS, BASE OF WALL ELEVATIONS, AND BUILDING PAD ELEVATIONS ARE APPROXIMATELY EQUIVALENT.*

Appendix C of the Noise Report (Appendix F of this EIR) provides the complete inputs and results to the FHWA traffic noise prediction model and barrier calculations. The modeled noise barriers assume flat site conditions where roadway elevations, base of wall elevations, and building pad elevations are approximately equivalent.

Table 3.11-16 data indicate that noise barriers 10-feet in height along Eight Mile Road and West Lane, which are adjacent to proposed residential uses, would be sufficient to achieve compliance with the City of Stockton 60 dB L_{dn} exterior noise level standard for the proposed residential uses.

Interior Noise Impacts:

Modern construction typically provides a 25 dB exterior-to-interior noise level reduction with windows closed. Therefore, sensitive receptors exposed to exterior noise of 70 dB L_{dn}, or less, will typically comply with the City of Stockton 45 dB L_{dn} interior noise level standard. Additional noise reduction measures, such as acoustically rated windows are generally required for exterior noise levels exceeding 70 dB L_{dn}.

It should be noted that exterior noise levels are typically 2 to 3 dB higher at second floor locations. Additionally, noise barriers do not reduce exterior noise levels at second floor locations. The proposed residential uses are predicted to be exposed to unmitigated first floor exterior transportation noise levels of approximately 71 dB L_{dn}. Therefore, second floor facades are predicted to be exposed to exterior noise levels of up to 74 dB L_{dn}.

Based upon a 25 dB exterior-to-interior noise level reduction, interior noise levels at second floors are predicted to be 49 dB L_{dn}. These interior noise levels would exceed with the City's 45 dB L_{dn} interior noise level standard. Therefore, additional interior noise control measures would be required. This analysis assumes that mechanical ventilation will be provided to allow residents to keep doors and windows closed, as desired for acoustical isolation.

With implementation of the following interior and exterior mitigation measures, the proposed Project would have a **less than significant** impact relative to this environmental topic.

MITIGATION MEASURES

Mitigation Measure 3.11-3: *Minimum 11-foot tall sound walls and/or landscaped berms should be constructed along Eight Mile Road and a 10-foot tall sound wall and/or landscaped berms along West Lane adjacent to proposed residential uses. Noise barrier walls should be constructed of concrete panels, concrete masonry units, earthen berms, or any combination of these materials. Wood is not recommended due to eventual warping and degradation of acoustical performance. Where high density residential occurs, site designs could allow for applying the exterior noise level standard at common outdoor areas, which are shielded from Eight Mile Road and West Lane*

Mitigation Measure 3.11-4: *Windows at first row of second floor facades facing Eight Mile Road and West Lane should have an STC rating of 35. A detailed analysis of any additional interior mitigation measures should be conducted when building plans are available. Mechanical ventilation shall be installed in all residential uses to allow residents to keep doors and windows closed, as desired for acoustical isolation.*

With Bridge Alternative:

The FHWA traffic noise prediction model was used to predict Cumulative + With Bridge traffic noise levels at the proposed residential land uses associated with the Project. Table 3.11-17 shows the predicted traffic noise levels at the proposed residential uses adjacent to the major Project-area arterial roadways. Table 3.11-17 also indicates the property line noise barrier heights required to achieve compliance with an exterior noise level standard of 60 dB L_{dn}.

TABLE 3.11-17: CUMULATIVE WITH BRIDGE TRANSPORTATION NOISE LEVELS AT PROPOSED RESIDENTIAL USES

ROADWAY	RECEPTOR DESCRIPTION	APPROXIMATE RESIDENTIAL SETBACK, FEET[1]	ADT	PREDICTED TRAFFIC NOISE LEVELS, DB L_{DN}[2]			
				NO WALL	8' WALL	10' WALL	11' WALL
Eight Mile Road	Backyards	75	65,464	71	63	62	60
West Lane	Backyards	75	48,318	71	63	61	60

[1] SETBACK DISTANCES ARE MEASURED IN FEET FROM THE CENTERLINES OF THE ROADWAYS TO THE CENTER OF RESIDENTIAL BACKYARDS.

[2] THE MODELED NOISE BARRIERS ASSUME FLAT SITE CONDITIONS WHERE ROADWAY ELEVATIONS, BASE OF WALL ELEVATIONS, AND BUILDING PAD ELEVATIONS ARE APPROXIMATELY EQUIVALENT.

Appendix C of the Noise Report (Appendix F of this EIR) provides the complete inputs and results to the FHWA traffic noise prediction model and barrier calculations. The modeled noise barriers

assume flat site conditions where roadway elevations, base of wall elevations, and building pad elevations are approximately equivalent.

Table 3.11-16 data indicate that noise barriers 10-feet in height along Eight Mile Road and West Lane, which are adjacent to proposed residential uses, would be sufficient to achieve compliance with the City of Stockton 60 dB L_{dn} exterior noise level standard for the proposed residential uses.

Interior Noise Impacts:

Modern construction typically provides a 25 dB exterior-to-interior noise level reduction with windows closed. Therefore, sensitive receptors exposed to exterior noise of 70 dB L_{dn}, or less, will typically comply with the City of Stockton 45 dB L_{dn} interior noise level standard. Additional noise reduction measures, such as acoustically rated windows are generally required for exterior noise levels exceeding 70 dB L_{dn}.

It should be noted that exterior noise levels are typically 2 to 3 dB higher at second floor locations. Additionally, noise barriers do not reduce exterior noise levels at second floor locations. The proposed residential uses are predicted to be exposed to unmitigated first floor exterior transportation noise levels of approximately 71 dB L_{dn}. Therefore, second floor facades are predicted to be exposed to exterior noise levels of up to 74 dB L_{dn}.

Based upon a 25 dB exterior-to-interior noise level reduction, interior noise levels at second floors are predicted to be 49 dB L_{dn}. These interior noise levels would exceed with the City's 45 dB L_{dn} interior noise level standard. Therefore, additional interior noise control measures would be required. This analysis assumes that mechanical ventilation will be provided to allow residents to keep doors and windows closed, as desired for acoustical isolation.

With implementation of the following interior and exterior mitigation measures, the proposed Project would have a **less than significant** impact relative to this environmental topic.

Implementation of the same interior and exterior mitigation measures as the proposed Project would be required for the With Bridge Alternative. With implementation of these mitigation measure, the General Plan 2035 Alternative would have a **less than significant** impact relative to this environmental topic. Compared to the proposed Project, this alternative is inferior relative to this topic.

No Build Alternative:

Under the No Build Alternative, development of the Project site would not occur, and the Project site would remain in its current condition. The No Build Alternative would result in the Project site remaining vacant and would not introduce new sensitive receptors to the Project site. As such, **no impact** would occur, and no mitigation is required. Compared to the proposed Project, this alternative is environmental superior relative to this topic.

General Plan 2035 Alternative:

Under the General Plan 2035 Alternative, the entire 318.82-acre Project site would be developed with residential and commercial land uses.

The FHWA traffic noise prediction model was used to predict Cumulative + General Plan 2035 Alternative traffic noise levels at the proposed residential land uses associated with the alternative. Table 3.11-18 shows the predicted traffic noise levels at the proposed residential uses adjacent to the major Project-area arterial roadways. Table 3.11-18 also indicates the property line noise barrier heights required to achieve compliance with an exterior noise level standard of 60 dB L_{dn}.

TABLE 3.11-18: CUMULATIVE + GENERAL PLAN 2035 ALTERNATIVE TRANSPORTATION NOISE LEVELS AT RESIDENTIAL USES

ROADWAY	RECEPTOR DESCRIPTION	APPROXIMATE RESIDENTIAL SETBACK, FEET[1]	ADT	PREDICTED TRAFFIC NOISE LEVELS, DB L_{DN}[2]			
				NO WALL	8' WALL	10' WALL	11' WALL
Eight Mile Road	Backyards	75	61,164	71	63	61	60
West Lane	Backyards	75	47,000	71	62	60	60

[1] *SETBACK DISTANCES ARE MEASURED IN FEET FROM THE CENTERLINES OF THE ROADWAYS TO THE CENTER OF RESIDENTIAL BACKYARDS.*

[2] *THE MODELED NOISE BARRIERS ASSUME FLAT SITE CONDITIONS WHERE ROADWAY ELEVATIONS, BASE OF WALL ELEVATIONS, AND BUILDING PAD ELEVATIONS ARE APPROXIMATELY EQUIVALENT.*

Table 3.11-18 data indicate that noise barriers 11-feet in height along Eight Mile Road and 10-feet in height along West Lane, which are adjacent to proposed residential uses would be sufficient to achieve compliance with the City of Stockton 60 dB L_{dn} exterior noise level standard for the proposed residential uses.

Interior Noise Impacts:

Modern construction typically provides a 25 dB exterior-to-interior noise level reduction with windows closed. Therefore, sensitive receptors exposed to exterior noise of 70 dB L_{dn}, or less, will typically comply with the City of Stockton 45 dB L_{dn} interior noise level standard. Additional noise reduction measures, such as acoustically rated windows are generally required for exterior noise levels exceeding 70 dB L_{dn}.

It should be noted that exterior noise levels are typically 2 to 3 dB higher at second floor locations. Additionally, noise barriers do not reduce exterior noise levels at second floor locations. The proposed residential uses are predicted to be exposed to unmitigated first floor exterior transportation noise levels of approximately 71 dB L_{dn}. Therefore, second floor facades are predicted to be exposed to exterior noise levels of up to 74 dB L_{dn}.

Based upon a 25 dB exterior-to-interior noise level reduction, interior noise levels at second floors are predicted to be 49 dB L_{dn}. These interior noise levels would exceed with the City's 45 dB L_{dn} interior noise level standard. Therefore, additional interior noise control measures would be

required. This analysis assumes that mechanical ventilation will be provided to allow residents to keep doors and windows closed, as desired for acoustical isolation.

Implementation of the same interior and exterior mitigation measures as the proposed Project would be required for the General Plan 2035 Alternative. However, the sound walls along Eight Mile Road would be increased from 10 feet under the proposed Project to 11 feet under the General Plan 2035 Alternative. With implementation of these mitigation measure, the General Plan 2035 Alternative would have a **less than significant** impact relative to this environmental topic. Compared to the proposed Project, this alternative is inferior relative to this topic.

Reduced Project Alternative:

The FHWA traffic noise prediction model was used to predict Cumulative + Reduced Project Alternative traffic noise levels at the proposed residential land uses associated with the alternative. Table 3.11-19 shows the predicted traffic noise levels at the proposed residential uses adjacent to the major Project-area arterial roadways. Table 3.11-19 also indicates the property line noise barrier heights required to achieve compliance with an exterior noise level standard of 60 dB L_{dn}.

TABLE 3.11-19: CUMULATIVE + REDUCED PROJECT ALTERNATIVE TRANSPORTATION NOISE LEVELS AT RESIDENTIAL USES

ROADWAY	RECEPTOR DESCRIPTION	APPROXIMATE RESIDENTIAL SETBACK, FEET[1]	ADT	PREDICTED TRAFFIC NOISE LEVELS, DB L_{DN}[2]			
				NO WALL	8' WALL	10' WALL	11' WALL
Eight Mile Road	Backyards	75	61,042	71	63	61	60
West Lane	Backyards	75	43,564	70	62	60	59

[1] SETBACK DISTANCES ARE MEASURED IN FEET FROM THE CENTERLINES OF THE ROADWAYS TO THE CENTER OF RESIDENTIAL BACKYARDS.

[2] THE MODELED NOISE BARRIERS ASSUME FLAT SITE CONDITIONS WHERE ROADWAY ELEVATIONS, BASE OF WALL ELEVATIONS, AND BUILDING PAD ELEVATIONS ARE APPROXIMATELY EQUIVALENT.

Table 3.11-19data indicate that noise barriers 11-feet in height along Eight Mile Road and 10-feet in height along West Lane, which are adjacent to proposed residential uses would be sufficient to achieve compliance with the City of Stockton 60 dB L_{dn} exterior noise level standard for the proposed residential uses.

Interior Noise Impacts:

Modern construction typically provides a 25 dB exterior-to-interior noise level reduction with windows closed. Therefore, sensitive receptors exposed to exterior noise of 70 dB L_{dn}, or less, will typically comply with the City of Stockton 45 dB L_{dn} interior noise level standard. Additional noise reduction measures, such as acoustically rated windows are generally required for exterior noise levels exceeding 70 dB L_{dn}.

It should be noted that exterior noise levels are typically 2 to 3 dB higher at second floor locations. Additionally, noise barriers do not reduce exterior noise levels at second floor locations. The

proposed residential uses are predicted to be exposed to unmitigated first floor exterior transportation noise levels of approximately 71 dB L_{dn}. Therefore, second floor facades are predicted to be exposed to exterior noise levels of up to 74 dB L_{dn}.

Based upon a 25 dB exterior-to-interior noise level reduction, interior noise levels at second floors are predicted to be 49 dB L_{dn}. These interior noise levels would exceed with the City's 45 dB L_{dn} interior noise level standard. Therefore, additional interior noise control measures would be required. This analysis assumes that mechanical ventilation will be provided to allow residents to keep doors and windows closed, as desired for acoustical isolation.

Implementation of the same interior and exterior mitigation measures as the proposed Project would be required for the Reduced Project Alternative. However, the sound walls along Eight Mile Road would be increased from 10 feet under the proposed Project to 11 feet under the Reduced Project Alternative. With implementation of these mitigation measure, the Reduced Project Alternative would have a **less than significant** impact relative to this environmental topic. Compared to the proposed Project, this alternative is inferior relative to this topic.

Reduced Intensity/Density Alternative:

The FHWA traffic noise prediction model was used to predict Cumulative + Reduced Intensity/Density Alternative traffic noise levels at the proposed residential land uses associated with the alternative. Table 3.11-20 shows the predicted traffic noise levels at the proposed residential uses adjacent to the major Project-area arterial roadways. Table 3.11-20 also indicates the property line noise barrier heights required to achieve compliance with an exterior noise level standard of 60 dB L_{dn}.

TABLE 3.11-20: CUMULATIVE + REDUCED INTENSITY/DENSITY ALTERNATIVE TRANSPORTATION NOISE LEVELS AT RESIDENTIAL USES

ROADWAY	RECEPTOR DESCRIPTION	APPROXIMATE RESIDENTIAL SETBACK, FEET[1]	ADT	PREDICTED TRAFFIC NOISE LEVELS, DB L_{DN}[2]			
				NO WALL	8' WALL	10' WALL	11' WALL
Eight Mile Road	Backyards	75	61,448	71	63	61	60
West Lane	Backyards	75	44,032	70	62	60	59

[1] SETBACK DISTANCES ARE MEASURED IN FEET FROM THE CENTERLINES OF THE ROADWAYS TO THE CENTER OF RESIDENTIAL BACKYARDS.

[2] THE MODELED NOISE BARRIERS ASSUME FLAT SITE CONDITIONS WHERE ROADWAY ELEVATIONS, BASE OF WALL ELEVATIONS, AND BUILDING PAD ELEVATIONS ARE APPROXIMATELY EQUIVALENT.

Table 3.11-20 data indicate that noise barriers 11-feet in height along Eight Mile Road and 10-feet in height along West Lane, which are adjacent to proposed residential uses would be sufficient to achieve compliance with the City of Stockton 60 dB L_{dn} exterior noise level standard for the proposed residential uses.

Interior Noise Impacts:

Modern construction typically provides a 25 dB exterior-to-interior noise level reduction with windows closed. Therefore, sensitive receptors exposed to exterior noise of 70 dB L_{dn}, or less, will typically comply with the City of Stockton 45 dB L_{dn} interior noise level standard. Additional noise reduction measures, such as acoustically rated windows are generally required for exterior noise levels exceeding 70 dB L_{dn}.

It should be noted that exterior noise levels are typically 2-3 dB higher at second floor locations. Additionally, noise barriers do not reduce exterior noise levels at second floor locations. The proposed residential uses are predicted to be exposed to unmitigated first floor exterior transportation noise levels of approximately 71 dB L_{dn}. Therefore, second floor facades are predicted to be exposed to exterior noise levels of up to 74 dB L_{dn}.

Based upon a 25 dB exterior-to-interior noise level reduction, interior noise levels at second floors are predicted to be 49 dB L_{dn}. These interior noise levels would exceed with the City's 45 dB L_{dn} interior noise level standard. Therefore, additional interior noise control measures would be required. This analysis assumes that mechanical ventilation will be provided to allow residents to keep doors and windows closed, as desired for acoustical isolation.

Implementation of the same interior and exterior mitigation measures as the proposed Project would be required for the Reduced Intensity/Density Alternative. However, the sound walls along Eight Mile Road would be increased from 10 feet under the proposed Project to 11 feet under the Reduced Intensity/Density Alternative. With implementation of these mitigation measure, the Reduced Intensity/Density Alternative would have a **less than significant** impact relative to this environmental topic. Compared to the proposed Project, this alternative is inferior relative to this topic.

Impact 3.11-5: The proposed Project has the potential to expose sensitive receptors to substantial noise from proposed park or school uses. (Less than Significant)

Proposed Project:

Children playing at neighborhood parks or outdoor recreational fields (softball, soccer, basketball, tennis) are often considered potentially significant noise sources which could adversely affect adjacent noise-sensitive land uses. Typical noise levels associated with groups of approximately 50 children playing at a distance of 50 feet generally range from 55 to 60 dB L_{eq} and 70 to 75 dB L_{max}. It is expected that park activities would occur during daytime hours. The City of Stockton Municipal Code exempts outdoor play areas from parks, provided that they occur between the hours of 7:00 am. and 10:00 pm

Therefore, this would be considered a **less than significant** impact.

With Bridge Alternative:

Children playing at neighborhood parks or outdoor recreational fields (softball, soccer, basketball, tennis) are often considered potentially significant noise sources which could adversely affect adjacent noise-sensitive land uses. Typical noise levels associated with groups of approximately 50 children playing at a distance of 50 feet generally range from 55 to 60 dB L_{eq} and 70 to 75 dB L_{max}. It is expected that park activities would occur during daytime hours. The City of Stockton Municipal Code exempts outdoor play areas from parks, provided that they occur between the hours of 7:00 am. and 10:00 pm

Therefore, this would be considered a **less than significant** impact.

No Build Alternative:

Under the No Build Alternative, development of the Project site would not occur, and the Project site would remain in its current condition. The No Build Alternative would not result in park activities on the site. Therefore, park noise would not occur. As such, **no impact** would occur, and no mitigation is required. Compared to the proposed Project, this alternative is environmentally superior relative to this topic.

General Plan 2035 Alternative:

Under the General Plan 2035 Alternative, the entire 318.82-acre Project site would be developed with residential and commercial land uses.

The General Plan 2035 Alternative would include park space to serve the community and surrounding area. Similar to the proposed Project, typical noise levels associated with groups of approximately 50 children playing at a distance of 50 feet generally range from 55 to 60 dB L_{eq} and 70 to 75 dB L_{max}. It is expected that park activities would occur during daytime hours. The City of Stockton Municipal Code exempts outdoor play areas from parks, provided that they occur between the hours of 7:00 am. and 10:00 pm

Under this alternative, impacts would be **less than significant**. Compared to the proposed Project, this alternative is equal relative to this topic.

Reduced Project Alternative:

Under the Reduced Project Alternative, the Project site would be developed with the same components as the proposed Project, but the area utilized for the development would be reduced by approximately 33 percent. The total Project site would be reduced by approximately 106.2 acres, and the existing 15.57-acre industrial area would be eliminated from the Project site. This approximately 197.05-acre alternative would result in up to 715 LDR units (with school) to 805 LDR units (without school) and up to 226 HDR units (with or without school), for a total of 941 units (with school) to 1,031 units (without school). This would result in a reduction of 472 (with or without school) units when compared to the proposed Project. The 10.5-acre commercial area in the northwest portion of the Project site would be eliminated. This would eliminate a 70,000-sf grocery store, 22,000 sf of retail shops, a 3,500-sf quick service restaurant, a 3,500-sf convenience

store with attached fueling facility, and a 2,500-sf wine tasting room. This alternative would still establish a site for a 14.7-acre K-8 school to be developed by the LUSD. However, if the LUSD decides against the K-8 school siting, the area will instead include the development of single family residential units.

Similar to the proposed Project, typical noise levels associated with groups of approximately 50 children playing at a distance of 50 feet generally range from 55 to 60 dB L_{eq} and 70 to 75 dB L_{max}. It is expected that park activities would occur during daytime hours. The City of Stockton Municipal Code exempts outdoor play areas from parks, provided that they occur between the hours of 7:00 am. and 10:00 pm

Under this alternative, impacts would be **less than significant**. Compared to the proposed Project, this alternative is equal relative to this topic.

Reduced Intensity/Density Alternative:

Under the Reduced Intensity/Density Alternative, the Project site would be developed with a reduction in the overall project intensity/density while maintaining the approximate overall project footprint. For the purposes of discussion, this option considers a 20 percent reduction in the intensity/density of the project while maintaining the approximately 318.82-acre project footprint. Typical residential lots would increase from 5,000 to 6,000 sf to 6,000 to 7,400 sf. This alternative would result in up to 858 LDR units (with school) to 930 LDR units (without school) and up to 272 HDR units (with or without school), for a total of 1,130 units (with school) to 1,202 units (without school). The 10.5-acre commercial area in the northwest portion of the project site would be eliminated. This would eliminate a 70,000 square foot grocery store, 22,000 square feet of retail shops, a 3,500 square foot quick service restaurant, a 3,500 square foot convenience store with attached fueling facility, and a 2,500 square foot wine tasting room. This alternative would still establish a site for a 14.7-acre K-8school to be developed by the LUSD. However, if the LUSD decides against the elementary school siting, the area will instead include the development of single family residential units.

Therefore, play areas may be included with the school site. Similar to the proposed Project, typical noise levels associated with groups of approximately 50 children playing at a distance of 50 feet generally range from 55 to 60 dB L_{eq} and 70 to 75 dB L_{max}. It is expected that park activities would occur during daytime hours. The City of Stockton Municipal Code exempts outdoor play areas from parks, provided that they occur between the hours of 7:00 am. and 10:00 pm

Under this alternative, impacts would be **less than significant**. Compared to the proposed Project, this alternative is equal relative to this topic.

Impact 3.11-6: The proposed Project has the potential to expose new sensitive receptors to excessive railroad noise. (Less than Significant with Mitigation)

Proposed Project:

The following discussion is based upon noise level measurements of train operations conducted along the UPRR track adjacent to the east side of the Project site. The results indicate that the railroad activity resulted in an overall noise level of 80 dB L_{dn} at a distance of 90 feet from the track centerline.

Proposed residential land uses located adjacent to the UPRR line are predicted to be impacted by railroad noise. UPRR train activity is predicted to exceed the City of Stockton lower level 60 dB L_{dn} and upper level 65 dB L_{dn} exterior noise level standard applicable to residential uses and is, therefore, considered significant according to the Project's Significance Criteria.

A barrier analysis was conducted to determine the appropriate barrier heights and setbacks required to reduce railroad noise levels within compliance with the City of Stockton exterior noise level criteria. Table 3.11-21 shows the results of the barrier analysis.

TABLE 3.11-21: MITIGATED RAILROAD NOISE LEVELS

SOURCE HEIGHT	*RECEPTOR DESCRIPTION*	*APPROXIMATE RESIDENTIAL SETBACK, FEET*[1]	*PREDICTED TRAFFIC NOISE LEVELS, DB L_{DN}*			
			NO WALL	*10' WALL*	*12' WALL*	*14' WALL*
17-feet relative to the Project site. This assumes the tracks are 7-feet above the Project site.	Backyards	100	80	73	70	68
	Backyards	200	75	66	64	62
	Backyards	300	70	61	59	57

[1] *SETBACK DISTANCES ARE MEASURED IN FEET FROM THE CENTERLINES OF THE RAILROAD TRACK TO THE CENTER OF RESIDENTIAL BACKYARDS.*

Based upon Table 3.11-21, it is not practical to achieve the lower limit noise level standard of 60 dB L_{dn} with setbacks of up to 200 feet. With a setback of 200 feet, the upper limit of 65 dB L_{dn} can be achieved with a 12-foot tall wall/barrier (relative to the building pad elevation). With a setback of 300 feet, the lower limit of 60 dB L_{dn} can be achieved with a 12-foot tall wall/barrier (relative to the building pad elevation).

Interior Noise Impacts:

Modern construction typically provides a 25 dB exterior-to-interior noise level reduction with windows closed. Therefore, sensitive receptors exposed to exterior noise of 70 dB L_{dn}, or less, will typically comply with the City of Stockton 45 dB L_{dn} interior noise level standard. Additional noise reduction measures, such as acoustically rated windows are generally required for exterior noise levels exceeding 70 dB L_{dn}.

It should be noted that exterior noise levels are typically 2 to 3 dB higher at second floor locations. Additionally, noise barriers do not reduce exterior noise levels at second floor locations. The

proposed residential uses adjacent to the UPRR tracks will have mitigation at first floor rooms to achieve a minimum exterior noise level of 65 dB L_{dn}. Therefore, first floor receivers will comply with the interior noise levels of 45 dB L_{dn}. Depending on setbacks, the second floor facades are predicted to be exposed to exterior noise levels of up to ranging from 83 dB L_{dn} to 73 dB L_{dn}.

Based upon a 25 dB exterior-to-interior noise level reduction, interior noise levels at second floors are predicted to range between 58 dB L_{dn} and 48 dB L_{dn}. These interior noise levels would exceed with the City's 45 dB L_{dn} interior noise level standard. Therefore, additional interior noise control measures would be required. This analysis assumes that mechanical ventilation will be provided to allow residents to keep doors and windows closed, as desired for acoustical isolation.

With implementation of the following interior and exterior mitigation measures, the proposed Project would have a **less than significant** impact relative to this environmental topic.

MITIGATION MEASURES

Mitigation Measure 3.11-5: *It is recommended that the Project site include proper setbacks and barriers to achieve a minimum exterior noise level of 65 dB L_{dn} at the backyards of the first row of residences facing the UPRR track. Noise barrier walls should be constructed of concrete panels, concrete masonry units, earthen berms, or any combination of these materials. Wood is not recommended due to eventual warping and degradation of acoustical performance.*

Mitigation Measure 3.11-6: *A detailed analysis of interior mitigation measures should be conducted when building plans are available. The analysis should be conducted for all residences up to a distance of 285-feet from the railroad track centerline (Location of the 70 dB Ldn contour). Mechanical ventilation shall be installed in all residential uses to allow residents to keep doors and windows closed, as desired for acoustical isolation.*

No Build Alternative:

Under the No Build Alternative, development of the Project site would not occur, and the Project site would remain in its current condition. Implementation of the No Build Alternative would not introduce new sensitive receptors to the site. Under this alternative, **no impact** would occur, and no mitigation is required. Compared to the proposed Project, this alternative is environmentally superior relative to this topic.

With Bridge Alternative:

The following discussion is based upon noise level measurements of train operations conducted along the UPRR track adjacent to the east side of the Project site. The results indicate that the railroad activity resulted in an overall noise level of 80 dB L_{dn} at a distance of 90 feet from the track centerline.

Proposed residential land uses located adjacent to the UPRR line are predicted to be impacted by railroad noise. UPRR train activity is predicted to exceed the City of Stockton lower level 60 dB L_{dn}

and upper level 65 dB L_{dn} exterior noise level standard applicable to residential uses and is, therefore, considered significant according to the Project's Significance Criteria.

Based upon Table 3.11-21, it is not practical to achieve the lower limit noise level standard of 60 dB L_{dn} with setbacks of up to 200 feet. With a setback of 200 feet, the upper limit of 65 dB L_{dn} can be achieved with a 12-foot tall wall/barrier (relative to the building pad elevation). With a setback of 300 feet, the lower limit of 60 dB L_{dn} can be achieved with a 12-foot tall wall/barrier (relative to the building pad elevation).

Interior Noise Impacts:

Modern construction typically provides a 25 dB exterior-to-interior noise level reduction with windows closed. Therefore, sensitive receptors exposed to exterior noise of 70 dB L_{dn}, or less, will typically comply with the City of Stockton 45 dB L_{dn} interior noise level standard. Additional noise reduction measures, such as acoustically rated windows are generally required for exterior noise levels exceeding 70 dB L_{dn}.

It should be noted that exterior noise levels are typically 2 to 3 dB higher at second floor locations. Additionally, noise barriers do not reduce exterior noise levels at second floor locations. The proposed residential uses adjacent to the UPRR tracks will have mitigation at first floor rooms to achieve a minimum exterior noise level of 65 dB L_{dn}. Therefore, first floor receivers will comply with the interior noise levels of 45 dB L_{dn}. Depending on setbacks, the second floor facades are predicted to be exposed to exterior noise levels of up to ranging from 83 dB L_{dn} to 73 dB L_{dn}.

Based upon a 25 dB exterior-to-interior noise level reduction, interior noise levels at second floors are predicted to range between 58 dB L_{dn} and 48 dB L_{dn}. These interior noise levels would exceed with the City's 45 dB L_{dn} interior noise level standard. Therefore, additional interior noise control measures would be required. This analysis assumes that mechanical ventilation will be provided to allow residents to keep doors and windows closed, as desired for acoustical isolation.

With implementation of the previously mentioned interior and exterior mitigation measures, the With Bridge Alternative would have a **less than significant** impact relative to this environmental topic.

General Plan 2035 Alternative:

Under the General Plan 2035 Alternative, the entire 318.82-acre Project site would be developed with residential and commercial land uses. Similar to the proposed Project, the General Plan 2035 Alternative would likely place residential uses adjacent to the UPRR tracks. Based upon noise level measurements conducted noise level measurements of train operations along the UPRR track adjacent to the east side of the Project site. The results indicated that the railroad activity resulted in an overall noise level of 80 dB L_{dn}, at a distance of 90 feet from the track centerline.

Proposed residential land uses located adjacent to the UPRR line are predicted to be impacted by railroad noise. UPRR train activity is predicted to exceed the City of Stockton lower level 60 dB L_{dn}

and upper level 65 dB L_{dn} exterior noise level standard applicable to residential uses and is therefore considered significant according to the Project's Significance Criteria.

A barrier analysis was conducted to determine the appropriate barrier heights and setbacks required to reduce railroad noise levels within compliance with the City of Stockton exterior noise level criteria. Table 3.11-21 shows the results of the barrier analysis.

Based upon Table 3.11-21, it is not practical to achieve the lower limit noise level standard of 60 dB L_{dn} with setbacks of up to 200 feet. With a setback of 200 feet, the upper limit of 65 dB L_{dn} can be achieved with a 12-foot tall wall (relative to the building pad elevation). With a setback of 300 feet, the lower limit of 60 dB L_{dn} can be achieved with a 12-foot tall wall/barrier (relative to the building pad elevation).

Interior Noise Impacts:

Modern construction typically provides a 25 dB exterior-to-interior noise level reduction with windows closed. Therefore, sensitive receptors exposed to exterior noise of 70 dB L_{dn}, or less, will typically comply with the City of Stockton 45 dB L_{dn} interior noise level standard. Additional noise reduction measures, such as acoustically rated windows are generally required for exterior noise levels exceeding 70 dB L_{dn}.

It should be noted that exterior noise levels are typically 2 to 3 dB higher at second floor locations. Additionally, noise barriers do not reduce exterior noise levels at second floor locations. The proposed residential uses adjacent to the UPRR tracks will have mitigation at first floor rooms to achieve a minimum exterior noise level of 65 dB L_{dn}. Therefore, first floor receivers will comply with the interior noise levels of 45 dB L_{dn}. Depending on setbacks, the second floor facades are predicted to be exposed to exterior noise levels of up to ranging from 83 dB L_{dn} to 73 dB L_{dn}.

Based upon a 25 dB exterior-to-interior noise level reduction, interior noise levels at second floors are predicted to range between 58 dB L_{dn} and 48 dB L_{dn}. These interior noise levels would exceed with the City's 45 dB L_{dn} interior noise level standard. Therefore, similar to the proposed Project, additional interior noise control measures would be required. This analysis assumes that mechanical ventilation will be provided to allow residents to keep doors and windows closed, as desired for acoustical isolation.

With implementation of the same interior and exterior mitigation measures as the proposed Project, the General Plan 2035 Alternative would have a **less than significant** impact relative to this environmental topic. Compared to the proposed Project, this alternative is equal relative to this topic.

Reduced Project Alternative:

Proposed residential land uses located adjacent to the UPRR line are predicted to be impacted by railroad noise. UPRR train activity is predicted to exceed the City of Stockton lower level 60 dB L_{dn}

and upper level 65 dB L_{dn} exterior noise level standard applicable to residential uses and is therefore considered significant according to the Project's Significance Criteria.

A barrier analysis was conducted to determine the appropriate barrier heights and setbacks required to reduce railroad noise levels within compliance with the City of Stockton exterior noise level criteria. Table 3.11-21 shows the results of the barrier analysis.

Based upon Table 3.11-21, it is not practical to achieve the lower limit noise level standard of 60 dB L_{dn} with setbacks of up to 200 feet. With a setback of 200 feet, the upper limit of 65 dB L_{dn} can be achieved with a 12-foot tall wall (relative to the building pad elevation). With a setback of 300 feet, the lower limit of 60 dB L_{dn} can be achieved with a 12-foot tall wall/barrier (relative to the building pad elevation).

Interior Noise Impacts:

Modern construction typically provides a 25 dB exterior-to-interior noise level reduction with windows closed. Therefore, sensitive receptors exposed to exterior noise of 70 dB L_{dn}, or less, will typically comply with the City of Stockton 45 dB L_{dn} interior noise level standard. Additional noise reduction measures, such as acoustically rated windows are generally required for exterior noise levels exceeding 70 dB L_{dn}.

It should be noted that exterior noise levels are typically 2 to 3 dB higher at second floor locations. Additionally, noise barriers do not reduce exterior noise levels at second floor locations. The proposed residential uses adjacent to the UPRR tracks will have mitigation at first floor rooms to achieve a minimum exterior noise level of 65 dB L_{dn}. Therefore, first floor receivers will comply with the interior noise levels of 45 dB L_{dn}. Depending on setbacks, the second floor facades are predicted to be exposed to exterior noise levels of up to ranging from 83 dB L_{dn} to 73 dB L_{dn}.

Based upon a 25 dB exterior-to-interior noise level reduction, interior noise levels at second floors are predicted to range between 58 dB L_{dn} and 48 dB L_{dn}. These interior noise levels would exceed with the City's 45 dB L_{dn} interior noise level standard. Therefore, similar to the proposed Project, additional interior noise control measures would be required. This analysis assumes that mechanical ventilation will be provided to allow residents to keep doors and windows closed, as desired for acoustical isolation.

With implementation of the same interior and exterior mitigation measures as the proposed Project, the Reduced Project Alternative would have a **less than significant** impact relative to this environmental topic. Compared to the proposed Project, this alternative is equal relative to this topic.

Reduced Intensity/Density Alternative:

Similar to the proposed Project, the Reduced Intensity/Density Alternative would likely place residential uses adjacent to the UPRR tracks. Based upon noise level measurements conducted noise level measurements of train operations along the UPRR track adjacent to the east side of the

Project site. The results indicated that the railroad activity resulted in an overall noise level of 80 dB L_{dn}, at a distance of 90 feet from the track centerline.

Proposed residential land uses located adjacent to the UPRR line are predicted to be impacted by railroad noise. UPRR train activity is predicted to exceed the City of Stockton lower level 60 dB L_{dn} and upper level 65 dB L_{dn} exterior noise level standard applicable to residential uses and is therefore considered significant according to the Project's Significance Criteria.

A barrier analysis was conducted to determine the appropriate barrier heights and setbacks required to reduce railroad noise levels within compliance with the City of Stockton exterior noise level criteria. Table 3.11-21 shows the results of the barrier analysis.

Based upon Table 3.11-21, it is not practical to achieve the lower limit noise level standard of 60 dB L_{dn} with setbacks of up to 200 feet. With a setback of 200 feet, the upper limit of 65 dB L_{dn} can be achieved with a 12-foot tall wall (relative to the building pad elevation). With a setback of 300 feet, the lower limit of 60 dB L_{dn} can be achieved with a 12-foot tall wall/barrier (relative to the building pad elevation).

Interior Noise Impacts:

Modern construction typically provides a 25 dB exterior-to-interior noise level reduction with windows closed. Therefore, sensitive receptors exposed to exterior noise of 70 dB L_{dn}, or less, will typically comply with the City of Stockton 45 dB L_{dn} interior noise level standard. Additional noise reduction measures, such as acoustically rated windows are generally required for exterior noise levels exceeding 70 dB L_{dn}.

It should be noted that exterior noise levels are typically 2 to 3 dB higher at second floor locations. Additionally, noise barriers do not reduce exterior noise levels at second floor locations. The proposed residential uses adjacent to the UPRR tracks will have mitigation at first floor rooms to achieve a minimum exterior noise level of 65 dB L_{dn}. Therefore, similar to the proposed Project, first floor receivers will comply with the interior noise levels of 45 dB L_{dn}. Depending on setbacks, the second floor facades are predicted to be exposed to exterior noise levels of up to ranging from 83 dB L_{dn} to 73 dB L_{dn}.

Based upon a 25 dB exterior-to-interior noise level reduction, interior noise levels at second floors are predicted to range between 58 dB L_{dn} and 48 dB L_{dn}. These interior noise levels would exceed with the City's 45 dB L_{dn} interior noise level standard. Therefore, additional interior noise control measures would be required. This analysis assumes that mechanical ventilation will be provided to allow residents to keep doors and windows closed, as desired for acoustical isolation.

With implementation of the same interior and exterior mitigation measures as the proposed Project, the Reduced Intensity/Density Alternative would have a **less than significant** impact relative to this environmental topic. Compared to the proposed Project, this alternative is equal relative to this topic.

Impact 3.11-7: The proposed Project has the potential to expose new sensitive receptors to existing industrial noise levels. (Less than Significant with Mitigation)

Proposed Project:

Pacific Bell and Bragg Investment Company are located within the boundaries of the site at the north-central portion of the site. To quantify existing industrial noise levels in the vicinity of the Project site, j.c. brennan & associates, Inc. staff conducted short-term noise level measurements at three locations on the adjacent industrial land uses. Noise levels were generally in the range of 60 dB L_{eq} at a distance of 100 feet. Noise levels associated with the operations included heavy equipment moving about the site and idling equipment. The operations occur primarily during the daytime periods. However, the noise levels exceed the daytime noise level standards of 55 dBA L_{eq}. With implementation of the same following mitigation measure, the proposed Project would have a **less than significant** impact relative to this environmental topic.

MITIGATION MEASURES

Mitigation Measure 3.11-7: *Residential uses shall maintain a 100-foot setback from the industrial property lines, and a barrier 8-feet in height shall be constructed to reduce noise levels to less than 55 dBA L_{eq}, and break line-of-sight to the noise sources.*

No Build Alternative:

Under the No Build Alternative, development of the Project site would not occur, and the Project site would remain in its current condition. Implementation of the No Build Alternative would not introduce new sensitive receptors to the site. Under this alternative, **no impact** would occur, and no mitigation is required. Compared to the proposed Project, this alternative is environmentally superior relative to this topic.

With Bridge Alternative:

Under the With Bridge Alternative, the Project site would include residential uses adjacent to the existing industrial uses. Noise levels associated with the operations included heavy equipment moving about the site and idling equipment. The operations occur primarily during the daytime periods. However, similar to the proposed Project, the noise levels exceed the daytime noise level standards of 55 dBA L_{eq}. With implementation of the same mitigation measure as the proposed Project, the With Bridge Alternative would have a **less than significant** impact relative to this environmental topic. Compared to the proposed Project, this alternative is equal relative to this topic.

General Plan 2035 Alternative:

Under the General Plan 2035 Alternative, the Project site would include residential uses adjacent to the existing industrial uses. Noise levels associated with the operations included heavy

equipment moving about the site and idling equipment. The operations occur primarily during the daytime periods. However, similar to the proposed Project, the noise levels exceed the daytime noise level standards of 55 dBA L_{eq}. With implementation of the same mitigation measure as the proposed Project, the General Plan 2035 Alternative would have a **less than significant** impact relative to this environmental topic. Compared to the proposed Project, this alternative is equal relative to this topic.

Reduced Project Alternative:

Under the Reduced Project Alternative, the Project site would include residential uses adjacent to the existing industrial uses. Noise levels associated with the operations included heavy equipment moving about the site and idling equipment. The operations occur primarily during the daytime periods. However, similar to the proposed Project, the noise levels exceed the daytime noise level standards of 55 dBA L_{eq}. With implementation of the same mitigation measure as the proposed Project, the Reduced Project Alternative would have a **less than significant** impact relative to this environmental topic. Compared to the proposed Project, this alternative is equal relative to this topic.

Reduced Intensity/Density Alternative:

Under the Reduced Intensity/Density Alternative, the Project site would include residential uses adjacent to the existing industrial uses. Noise levels associated with the operations included heavy equipment moving about the site and idling equipment. The operations occur primarily during the daytime periods. However, similar to the proposed Project, the noise levels exceed the daytime noise level standards of 55 dBA L_{eq}. With implementation of the same mitigation measure as the proposed Project, the Reduced Intensity/Density Alternative would have a **less than significant** impact relative to this environmental topic. Compared to the proposed Project, this alternative is equal relative to this topic.

Impact 3.11-8: The proposed Project has the potential to expose new sensitive receptors to commercial development noise levels. (Less than Significant with Mitigation)

Proposed Project:

Commercial land use activities can produce noise which may affect adjacent sensitive land uses. These noise sources can be continuous and may contain tonal components which may be annoying to individuals who live in the nearby vicinity. In addition, noise generation from fixed noise sources may vary based upon climatic conditions, time of day and existing ambient noise levels. The Project includes commercial land uses in the northwest quadrant of the Project site. The primary noise sources generally include truck deliveries, loading dock operations, trash pickup, parking lot use, and heating, air conditioning and ventilation (HVAC) equipment.

The proposed commercial land use is adjacent to the proposed residential uses. Loading dock noise levels generally range between 50 dBA L_{eq} and 60 dBA L_{eq}, at a distance of 100 feet. The primary noise sources include truck arrivals and departures, and unloading of products.

HVAC equipment can also be a primary noise source associated with commercial or retail uses. These types of equipment are often mounted on roof tops, located on the ground or located within mechanical rooms. The noise sources can take the form of fans, pumps, air compressors, chillers or cooling towers. Noise levels from these types of equipment can vary significantly. Noise levels from these types of sources generally range between 45 dB to 70 dB at a distance of 50 feet and could exceed the daytime noise level criterion of 55 dB L_{eq}. However, numerous noise control strategies can be utilized to mitigate noise levels to less than significant levels. With implementation of the following mitigation measures, the proposed Project would have a **less than significant** impact relative to this environmental topic.

MITIGATION MEASURES

Mitigation Measure 3.11-8: *Planned retail commercial and light industrial and office uses shall be required to comply with the requirements of chapter 16 of the City of Stockton Development Code.*

Mitigation Measure 3.11-9: *When tentative maps for the commercial developments are available, a detailed noise analysis shall be completed to ensure compliance with the City of Stockton noise level criteria.*

Mitigation Measure 3.11-10: *HVAC equipment should be located either at ground level or when located on roof-tops, the building facades should include parapets for shielding.*

Mitigation Measure 3.11-11: *Where commercial retail land uses are adjacent to residential areas or separated by local streets, barriers should be considered as a means of reducing overall noise levels due to on-site activities. Generally, barriers in the range of 8-feet in height are sufficient to reduce on-site noise levels at residential uses.*

No Build Alternative:

Under the No Build Alternative, development of the Project site would not occur, and the Project site would remain in its current condition. Implementation of the No Build Alternative would not introduce new sensitive receptors to the site. Under this alternative, **no impact** would occur, and no mitigation is required. Compared to the proposed Project, this alternative is environmentally superior relative to this topic.

With Bridge Alternative:

Commercial land use activities can produce noise which may affect adjacent sensitive land uses. These noise sources can be continuous and may contain tonal components which may be annoying to individuals who live in the nearby vicinity. In addition, noise generation from fixed noise sources may vary based upon climatic conditions, time of day and existing ambient noise levels. The

Project includes commercial land uses in the northwest quadrant of the Project site. The primary noise sources generally include truck deliveries, loading dock operations, trash pickup, parking lot use, and heating, air conditioning and ventilation (HVAC) equipment.

The proposed commercial land use is adjacent to the proposed residential uses. Loading dock noise levels generally range between 50 dBA L_{eq} and 60 dBA L_{eq}, at a distance of 100 feet. The primary noise sources include truck arrivals and departures, and unloading of products.

HVAC equipment can also be a primary noise source associated with commercial or retail uses. These types of equipment are often mounted on roof tops, located on the ground or located within mechanical rooms. The noise sources can take the form of fans, pumps, air compressors, chillers or cooling towers. Noise levels from these types of equipment can vary significantly. Noise levels from these types of sources generally range between 45 dB to 70 dB at a distance of 50 feet and could exceed the daytime noise level criterion of 55 dB L_{eq}. However, numerous noise control strategies can be utilized to mitigate noise levels to less than significant levels. With implementation of the same mitigation measures as the proposed Project the With Bridge Alternative would have a **less than significant** impact relative to this environmental topic.

General Plan 2035 Alternative:

Under the General Plan 2035 Alternative, the entire 318.82-acre Project site would be developed with residential and commercial land uses. Under the General Plan 2035 Alternative, the Project site would include commercial development at the same site. Commercial land use activities can produce noise which may affect adjacent sensitive land uses. These noise sources can be continuous and may contain tonal components which may be annoying to individuals who live in the nearby vicinity. In addition, noise generation from fixed noise sources may vary based upon climatic conditions, time of day and existing ambient noise levels. The alternative includes commercial land uses in the northwest quadrant of the Project site. The primary noise sources generally include truck deliveries, loading dock operations, trash pickup, parking lot use, and heating, air conditioning and ventilation (HVAC) equipment.

The commercial land use is adjacent to residential uses. Loading dock noise levels generally range between 50 dBA L_{eq} and 60 dBA L_{eq}, at a distance of 100 feet. The primary noise sources include truck arrivals and departures, and unloading of products.

HVAC equipment can also be a primary noise source associated with commercial or retail uses. These types of equipment are often mounted on roof tops, located on the ground or located within mechanical rooms. The noise sources can take the form of fans, pumps, air compressors, chillers or cooling towers. Noise levels from these types of equipment can vary significantly. Noise levels from these types of sources generally range between 45 dB to 70 dB at a distance of 50 feet and could exceed the daytime noise level criterion of 55 dB Leq. However, numerous noise control strategies can be utilized to mitigate noise levels to less than significant levels. With implementation of the same mitigation measures as the proposed Project, the General Plan 2035 Alternative would have a **less than significant** impact relative to this environmental topic.

Reduced Project Alternative:

Under the Reduced Project Alternative, the Project site would be developed with the same components as the proposed Project, but the area utilized for the development would be reduced by approximately 33 percent. The total Project site would be reduced by approximately 106.2 acres, and the existing 15.57-acre industrial area would be eliminated from the Project site. This approximately 197.05-acre alternative would result in up to 715 LDR units (with school) to 805 LDR units (without school) and up to 226 HDR units (with or without school), for a total of 941 units (with school) to 1,031 units (without school). This would result in a reduction of 472 (with or without school) units when compared to the proposed Project. The 10.5-acre commercial area in the northwest portion of the Project site would be eliminated. This would eliminate a 70,000-sf grocery store, 22,000 sf of retail shops, a 3,500-sf quick service restaurant, a 3,500-sf convenience store with attached fueling facility, and a 2,500-sf wine tasting room. This alternative would still establish a site for a 14.7-acre K-8 school to be developed by the LUSD. However, if the LUSD decides against the K-8 school siting, the area will instead include the development of single family residential units.

Therefore, this is a **less than significant** impact. Compared to the proposed Project, this alternative is superior relative to this topic.

Reduced Intensity/Density Alternative:

Under the Reduced Intensity/Density Alternative, the Project site would be developed with a reduction in the overall project intensity/density while maintaining the approximate overall project footprint. For the purposes of discussion, this option considers a 20 percent reduction in the intensity/density of the project while maintaining the approximately 318.82-acre project footprint. Typical residential lots would increase from 5,000 to 6,000 sf to 6,000 to 7,400 sf. This alternative would result in up to 858 LDR units (with school) to 930 LDR units (without school) and up to 272 HDR units (with or without school), for a total of 1,130 units (with school) to 1,202 units (without school). The 10.5-acre commercial area in the northwest portion of the project site would be eliminated. This would eliminate a 70,000 square foot grocery store, 22,000 square feet of retail shops, a 3,500 square foot quick service restaurant, a 3,500 square foot convenience store with attached fueling facility, and a 2,500 square foot wine tasting room. This alternative would still establish a site for a 14.7-acre K-8school to be developed by the LUSD. However, if the LUSD decides against the elementary school siting, the area will instead include the development of single family residential units.

Under the Reduced Intensity/Density Alternative, the commercial area in the northwest portion of the Project site would be eliminated. Therefore, this is a **less than significant impact**. Compared to the proposed Project, this alternative is superior relative to this topic.

Appendix A
Acoustical Terminology

Acoustics	The science of sound.
Ambient Noise	The distinctive acoustical characteristics of a given space consisting of all noise sources audible at that location. In many cases, the term ambient is used to describe an existing or pre-project condition such as the setting in an environmental noise study.
Attenuation	The reduction of an acoustic signal.
A-Weighting	A frequency-response adjustment of a sound level meter that conditions the output signal to approximate human response.
Decibel or dB	Fundamental unit of sound, A Bell is defined as the logarithm of the ratio of the sound pressure squared over the reference pressure squared. A Decibel is one-tenth of a Bell.
CNEL	Community Noise Equivalent Level. Defined as the 24-hour average noise level with noise occurring during evening hours (7 - 10 p.m.) weighted by a factor of three and nighttime hours weighted by a factor of 10 prior to averaging.
Frequency	The measure of the rapidity of alterations of a periodic signal, expressed in cycles per second or hertz (Hz).
L_{dn}	Day/Night Average Sound Level. Similar to CNEL but with no evening weighting.
L_{eq}	Equivalent or energy-averaged sound level.
L_{max}	The highest root-mean-square (RMS) sound level measured over a given period of time.
$L_{(n)}$	The sound level exceeded a described percentile over a measurement period. For instance, an hourly L_{50} is the sound level exceeded 50% of the time during the one hour period.
Loudness	A subjective term for the sensation of the magnitude of sound.
Noise	Unwanted sound.
NRC	Noise Reduction Coefficient. NRC is a single-number rating of the sound-absorption of a material equal to the arithmetic mean of the sound-absorption coefficients in the 250, 500, 1000, and 2,000 Hz octave frequency bands rounded to the nearest multiple of 0.05. It is a representation of the amount of sound energy absorbed upon striking a particular surface. An NRC of 0 indicates perfect reflection; an NRC of 1 indicates perfect absorption.
Peak Noise	The level corresponding to the highest (not RMS) sound pressure measured over a given period of time. This term is often confused with the AMaximum@ level, which is the highest RMS level.
RT_{60}	The time it takes reverberant sound to decay by 60 dB once the source has been removed.
Sabin	The unit of sound absorption. One square foot of material absorbing 100% of incident sound has an absorption of 1 Sabin.
SEL	Sound Exposure Level. SEL is s rating, in decibels, of a discrete event, such as an aircraft flyover or train passby, that compresses the total sound energy into a one-second event.
STC	Sound Transmission Class. STC is an integer rating of how well a building partition attenuates airborne sound. It is widely used to rate interior partitions, ceilings/floors, doors, windows and exterior wall configurations.
Threshold of Hearing	The lowest sound that can be perceived by the human auditory system, generally considered to be 0 dB for persons with perfect hearing.
Threshold of Pain	Approximately 120 dB above the threshold of hearing.
Impulsive	Sound of short duration, usually less than one second, with an abrupt onset and rapid decay.
Simple Tone	Any sound which can be judged as audible as a single pitch or set of single pitches.

Notes

User approved volume balancing among the lanes for turning movement.
* HCM 2010 computational engine requires equal clearance times for the phases crossing the barrier.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Reduced v/c Ratio	0.77	0.17	0.31	1.27

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.
