UTILITY EASEMENT NOTES

- § 220-23. Utility easements.**
- A. Utilities.**
- Easements shall be provided for poles, wires, conduits, storm and sanitary sewer lines, gas, water and heat mains, and other utilities intended to serve the abutting lots and for access to facilities. Whenever possible such easements shall be centered on the side or rear lot lines or along the front lot lines. The minimum width of utility easements shall be as follows:
 - Sanitary sewer and storm drainage facilities: 30 feet.
 - Underground and overhead public utilities: 20 feet.
 - Nothing shall be placed, planted, set or put within the area of an easement that would adversely affect the function of the easement or conflict with the easement agreement. This requirement shall be noted on the final plan.
 - Where any natural gas, petroleum or high-tension electric transmission line traverses a subdivision or land development, the applicant shall confer with the applicable transmission or distribution company to determine the minimum easement requirements for the transmission line. Additionally, the Township will require, with the final plan application, a statement from the owner of the transmission line stating any conditions on the use of the tract which shall contain the above.
 - The applicant shall provide the Township with copies of easement agreements or statements from public utility providers, as applicable, to confirm the adequacy of proposed easements.
- B. Stormwater, sanitary sewer and clear water collection systems.** Where a subdivision and/or land development are traversed by stormwater, sanitary sewer or clear water collection system facilities, a utility easement shall be provided. In no case shall the easement be less than 30 feet in width. Additional width may be required by the Board of Commissioners depending on the purpose and use of the easements.
- C. Stream, watercourse, drainage channel, pond or lake.**
- Where a subdivision and/or land development is traversed by a watercourse, drainageway, channel or stream, there shall be provided a drainage easement conforming sustainability with its location for the purpose of widening, deepening, relocating, improving or protecting such watercourses, providing proper maintenance, or for the purpose of installing a stormwater or clear water system. - D. Conservation.**
- Where environmental protection and floodplain overlay zones exist, a conservation easement shall be depicted on the plan within the overlay area.
 - In all subdivisions and land developments, a fifteen-foot conservation easement shall be provided around all delineated wetland areas to ensure minimal disturbance and encroachment in these areas.
- E. Pedestrian.**
- Where necessary for access to public or common lands, a pedestrian easement shall be provided with a width of no less than 10 feet. Additional width, fencing and/or planting may be required by the Board of Commissioners, depending on the purpose and use of the easement.
 - When a subdivision process multifamily attached dwellings, such as townhouses, the plans shall include an access easement for the purposes of property maintenance along the front and rear property lines of all units and side property lines of the end units, to allow all lot owners within the unit access to front and rear yards. The access easement shall have a minimum width of 10 feet. This requirement shall be noted on the final plan and shall be included in all deeds for lots which contain the easement.
