Fiber Narrative-Project Fighting Pike

Project Pike/Technology Meadows has developed multiple cutting-edge fiber connectivity solutions for this mission critical technology campus.

These redundant and diverse fiber solutions will feature dark and lit fiber solutions. 100G, 400G fiber solutions will be offered at our technology campus. The multiple fiber carriers that will serve our campus will connect our campus to long haul fiber carriers in North America. Stability and redundancy is a key component to any revenue generating networking solutions that support Hyperscaler and Ecommerce business organizations. Fiber reliability and diversity with a minimum of four (4) separate fibers have been developed by our technology development team to be placed on this mission critical 450-acre campus. The close proximity of local fiber carriers to our campus site makes our location favorable from a fiber performance/latency position.

These fiber diversity and redundancy solutions paired with ample power availability positions this mission critical facility campus to offer critical automation manufacturing solutions to the Ecommerce and AI business verticals. Critical Data House, LLC. has developed and created business relationships in the fiber connectivity and data center industries having over twenty (20) years of experience in the Silicon Valley market and throughout North America.
