Maintenance of Odor Control System

Please be advised that the Ypsilanti Community Utilities Authority's headworks odor control system has been placed offline for needed improvements. The Authority expects the system to remain offline through November 25, 2020. During this period, YCUA will be replacing one of the two inline fans. This improvement will enhance the reliability and dependability of the Authority's headworks odor control system. The wastewater treatment plant is located at 2777 State Road in the Township of Ypsilanti.

The purpose of the odor control system is to remove the malodorous elements of the foul air generated at the wastewater treatment plant and discharge stable (scrubbed) air to the atmosphere. YCUA will take every effort to minimize the system downtime and apologizes in advance for any inconvenience caused by nuisance odors during this time period.

Please forward any questions or concerns regarding nuisance odors from the wastewater treatment plant to Sree Mullapudi, Director of Wastewater Operations/Compliance by phone at 734-484-4600 ext. 121 or by email at smullapudi@ycua.org.
