

Public Notice

November 30, 2022

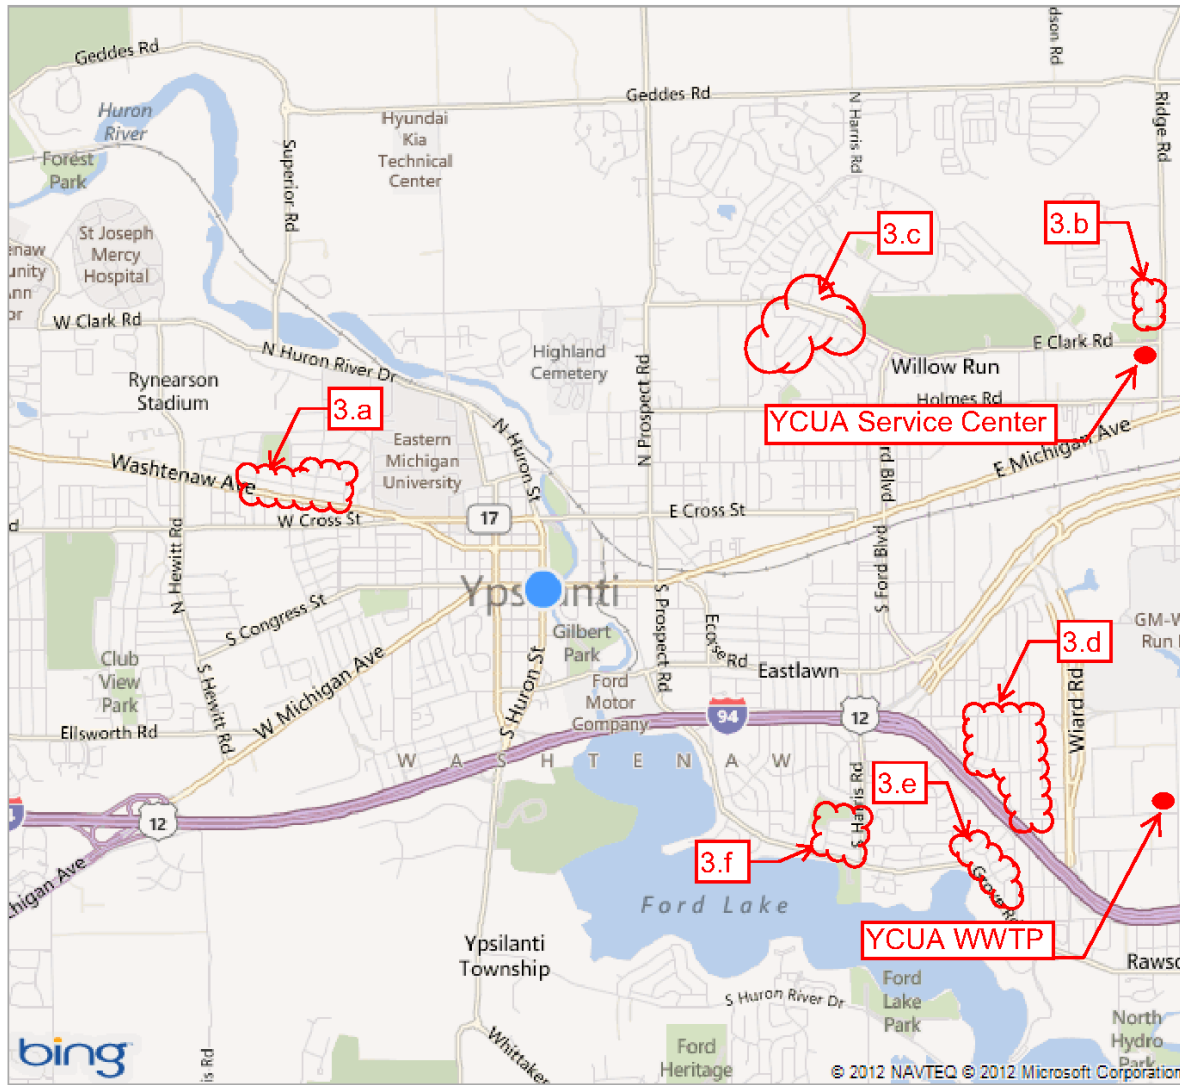

Starting the week of December 5, 2022, Duke's Root Control, Inc. (Duke's), a contractor for the Ypsilanti Community Utilities Authority (YCUA) will be working several neighborhoods performing maintenance on the sanitary sewer system. The work will involve applying herbicide to the sanitary sewers to minimize the intrusion of tree roots into the pipes at the locations where building sewers from each residence connect to the main line. Work is anticipated to be completed by December 10, 2022.

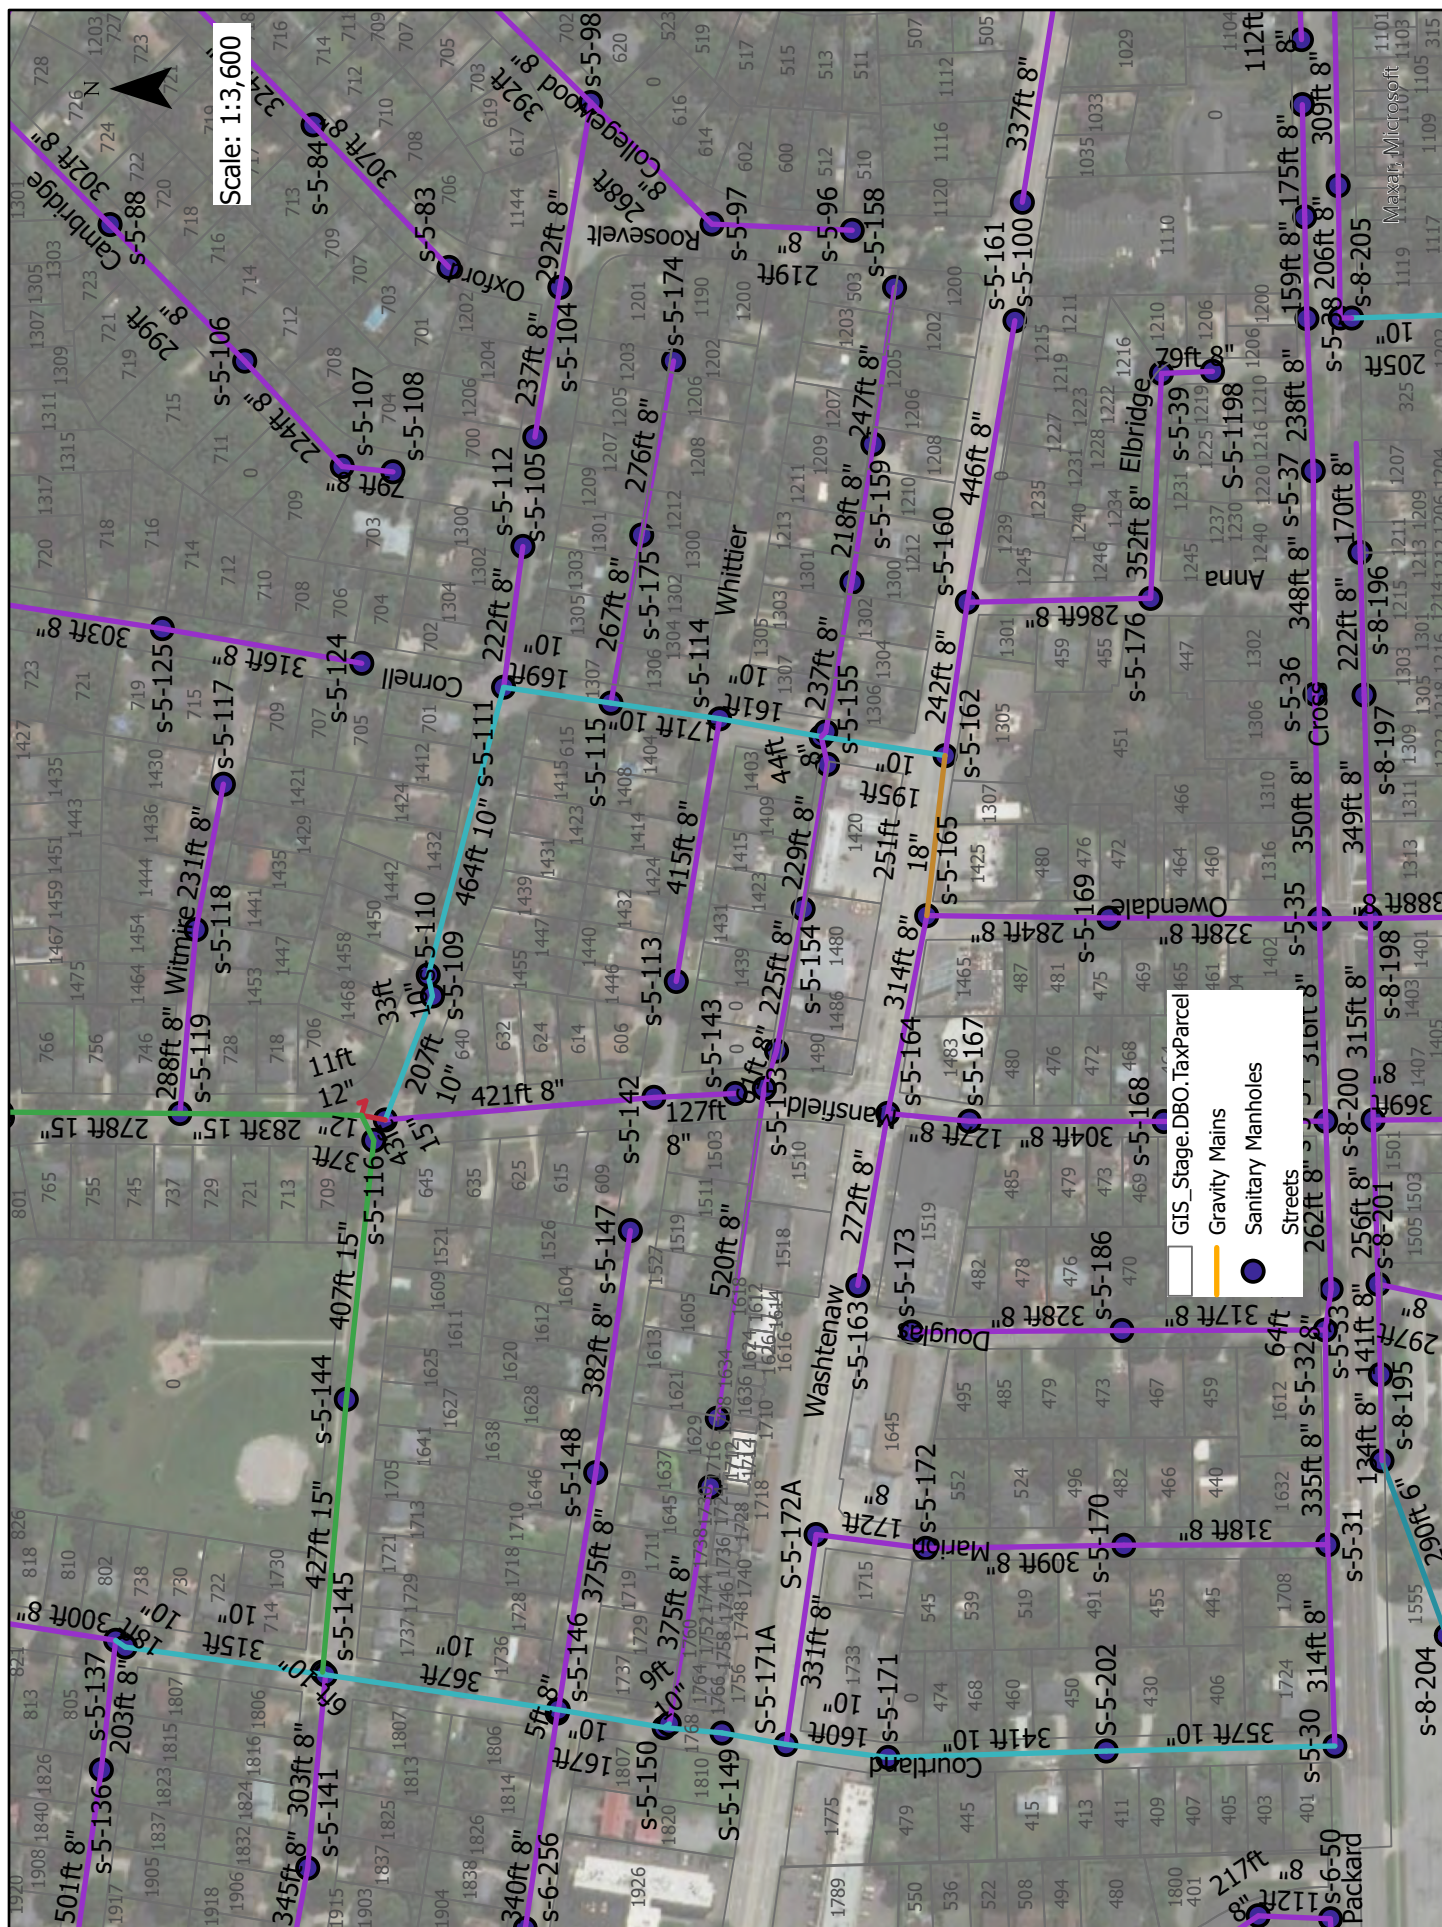

Maps of the areas included in Duke's contract are attached. Due to the fact that most of the sanitary sewers included in the project are located along rear or side property lines, Duke's employees and YCUA staff may need to enter some yards at the addresses noted on the maps in order to complete the work. We do ask that any pets at these addresses be secured to allow the work to proceed in a safe manner. Residents do not need to be home during the work and no workers will need to enter your home.

This work differs from root removal maintenance typically performed by YCUA staff on other portions of the sanitary sewer system. The rear and side yard locations of the sanitary sewers included in the upcoming project prohibit YCUA equipment from accessing the manholes to perform maintenance. In addition, the sanitary sewers included in this project have previously been lined and the mechanical equipment YCUA staff utilizes to remove root intrusions can destroy the pipe lining material.

Please note that the repair work will be completed with a minimal disruption to any yards and surrounding areas. If you have any questions regarding this project please call YCUA at (734) 484-4600 and ask for Scott Westover, Engineering Manager at extension 220 or via electronic mail at swestover@ycua.org.
