## **Scheduled Maintenance of Headworks Odor Control System**

Please be advised the Authority will be performing scheduled maintenance on the headworks odor control system at the wastewater treatment plant. The wastewater treatment plant is located at 2777 State Road in the Township of Ypsilanti. In order to perform the scheduled maintenance, the odor control system will be shut down beginning May 14, 2024 thru May 17, 2024.

The purpose of the odor control system is to remove the malodorous elements of the foul air generated at the wastewater treatment plant and discharge stable (scrubbed) air to the atmosphere. In order to ensure proper operation, the Authority must occasionally shut down the system to clean various components and perform equipment maintenance. The Authority will take every effort to minimize the system downtime and apologizes in advance for any inconvenience caused by nuisance odors during this time period.

Please forward any questions or concerns regarding nuisance odors from the wastewater treatment plant to Sree Mullapudi, Director of Wastewater Operations/Compliance by phone at 734-484-4600 Ext. 121 or by email at [smullapudi@ycua.org](mailto:smullapudi@ycua.org).
